archived fact in Google.

>Me and a few hundred others all working together. Everyone's
>abilities and cooperation was required. Lose one part and the
>whole circuit goes down.

Sorry, Your Foolishness....That's NOT what you said! backpeddle as much
as you'd care to, your dirty underwear is now fully exposed!

>I did not claim "1.25 million messages." I claimed an approximation
>of 1.32 million based on known statistics of 1955 and clarified in
>sufficient detail.

"1.25"..."1.32"....Matters not...It's NOT what YOU said! =) (>>>laughing
it off as Lennie thinks he's "clarifying" this to his satisfaction!<<<)

>No misdirection, just IGNORANCE of a claimed military veteran
>based on his never being part of any branch's signal operations
>and not demonstrating knowledge or familiarity with any military
>radio operations or equipment other than some avionics black
>boxes.

Lennie, whatever I did in the Armed Forces is absolutely irrelevent when it
comes to being able to see through your veil of foolishness. Stevie Wonder and
Ray Charles could see through your BS!

>To repeat, military message transmission in a signals unit is
>NOT done by some solo operator in front of a single radio.

Then when you mean "we" or "team", may I suggest that YOU keep YOUR
fingers off of the " I " key?

> It is
>the cooperative, coordinated effort and skills of ALL in the unit.

"Well golly, gee whillikers, Mr Wilson!" Lennie finally says something I can agree with and even admire! TOO BAD he finally said it after having got his short pipe caught in his zipper and now he's trying to cover his tracks!

>No lies. It is not surprising that a great deal of ignorance of the
>rest of the world of radio exists among radio amateurs...the
>publications seldom carry such information and too many amateurs
>are loathe to attempt understanding the radio professionals.

Oh I have the GREATEST admiration and respect for "radio professionals"...It's YOU, and liars LIKE you I loathe.

>The bigbadass ex-marine has demonstrated NO knowledge
>whatsoever of military radio skills, knowledge, or familiarity and has
>attempted to bluff his way in knowledge several times.

And if I quote and plagarize the works and sources of others like YOU do, I will be "knowledgeable"? That's a reputation I don't need......YOU keep it, Lennie! Fit's you like a GLOVE!!

>Those of us
>who have actually worked in communications know and recognize him
>for the bluffing fake he is.

Your last "exposure" to "communications" was in 1955. Unfortunately for YOU, your frame of reference is grossly deficient.

But you keep on, Lennie. We're getting a good laugh from it!

>"Steve and the Boys" ought to relax, go out in the streets, look for
>old people to beat up and laugh at their agony. So far the "boys"
>haven't done so with me. Mosquito bites are not agony but are
>rather irritating. "The Boys" are mosquitoes.

"The Boys" are just about every licensed Amateur Radio operator....That YOU...Lennie the Licenseless, consider them "mosquitoes", is not unexpected. Your "true colors" are showing through.

> The Lennie got into it with us about where he can "legally" operate
with
> his GROL as opposed to an Amateur license.

He has this peculiar affliction of forgetting that this amateur radio, not
professional radio. Somehow he verified yet denied the fact that amateur
radio is both a hobby for many and a service as defined by the government.
I deleted the post after the 1st couple of paragraphs. He uses lots of
words to make the simplest points. Maybe he gets paid by the word like the
Monty Pyhton skit where you paid for an argument :-)

There's still hope yet

Enjoy your Sunday. I know I'll spend mine trying to figure out who I am because Len sez I'm not he, although the name on my FCC issued amateur radio license verifies that I is me. Wonder how he figures this stuff out. I'm not me but I am many others yet they are all me?? Did I get this right.

Love some lobster, but I see you're in Tenn? and I have to have my lobster fresh, as in just pulled from the cool depths of the LI Sound. Problem is there is a mysterious die-off of LI lobsters. No one can pinpoint the source and the catch, according to the papers is off 80%. Still, there's nothing finer.

CU later dude. remember, if you're going to polish your gun, do it in private

5657. Re: The tests that Real Hams took

Newsgroup: rec.radio.amateur.policy
Date: 2002-02-24 03:18:57 UTC
From: Mike Coslo <mcoslo@adelphia.net>
Message-ID: <3C785BA0.B23C2016@adelphia.net>
Source record: 35215

I've had the chance to look at some of the evidence provided, and I'm now pretty convinced that a person who passes the exam for a particular class is qualified to operate within their privileges.

I'm also pretty convinced that not only are the tests not "dumbed down", but If I were to make a suggestion, it would be that holders of licenses issued older than say 10 years should have to retake the tests to maintain their license.

I would have to agree with Ed that a person would have to be an idiot savant to memorize the huge amount of questions in the question pool just so they could pass the 50 questions that are asked. They would have to be "extra" special to then have somehow memorized the exact answer, because the ABCD answers are not in the same position as in the study guide.

I used the Extra pool questions as a study guide. Any answer I got wrong on the initial go round was researched by myself to find how to get the correct answer. I learned a lot when I was using the pool. It took several days to go through the pool and it's over 1000 questions. Anyone who tried to learn the answers via rote memorization would have to do more much work than simply learning the subject matter at hand. It took days to get through the thing.

The pool was a great help and learning tool. I then used an on-line test to check out my new knowledge.

My final thoughts are that I am now having a lot of fun, experimenting with the new computer based modes, some initial contesting activities, and having fun doing public service with my local club. I've also worked a little bit at recruiting new hams into the fold. I homebrew a fair amount of my own equipment also. The studying I've had to do has prepared me pretty well for all that.

I suspect my upbeat attitude may be seen by some as distinctly out of place. Too bad about that! ;^)

>scrape off the Old Glory bumper stickers and crap on the veterans again.

Not on "veterans"...On LENNIE!...There's never been ANY argument from ANYONE that I am aware of, least of all me, over Lennie's service in the Armed Forces.

That he insists that what he did in Japan in the 50's gives him any rank, status or priviledge OVER Amateur Radio Operators in the new millenium IS an argument!

I have, every year since i joined this forum, made some sort of "Happy Veterans Day" note to all herein, Lennie the Loser included.

All "knocks" were stowed for the day, as on THAT day, we are all one.

But Lennie has never said so much as "Back At Ya", "thanks", You too", etc etc etc, which leads me to believe that for all his pontification on such matters, it is LENNIE that holds such things in contempt.

I have no doubt he does.

PS...Note you switched screen names....AGAIN! Found an ISP that hasn't caught on to you yet? Or just trying to hide your own shameful bile from Goggle-searchers?

It's obviously SPAM since it's followed up to all sorts of groups that don't
care!

Somewhere (I think it was on the eQSL site) I saw where you had to have the
card mailed from eQSL (at a buck a card). Seemed to me exactly like the
sort of thing the League would dream up. Still, a buck is better than 3
IRCs.

In any case, you're right. If it were the case, there would be something on
the ARRL site. The last mention I could see was a year ago where the league
was working with a software vendor to provide a secure eQSLing service.

We had no teleprinter down and I've never offered an "excuse". Morse
was used for openings, closings, QSYs and crypto set. For more than
this you have no need to know and no clearance. My work in Guina-Bissau
is not at issue.

> >You didn't understand it then. You don't understand it now. The

Show us the statement I made, Len or clam up. This is simply another of
your attempts at diversion. My work in Guinea-Bissau is not an issue.

> A much later excuse/rationale claimed that such switchover in

> wires."

That you don't understand it does not negate its reality or its value.
Instead of saying that something "defies understanding", why not just
admit that YOU don't understand it?

My work in Guinea-Bissau is not an issue. By the way, I didn't work for
the Navy or any other branch of the U.S. military in Africa.

> >You've gotten more than this part twisted, Leonardo. I'm not attempting
> >to constantly post my past exploits.
>
> Again, incorrect. Heil has done so in the past.

All anyone needs to do is research your past posts and research mine.
They are there for all to see and they'd reveal you to be a fabricator
as well as a non-radio amateur.

> >I am a ham. You aren't.
>
> Heil is a radio amateur. I am a radio professional.

You aren't a radio anything. The past is past. You eat up the present
with your posts here. Ham radio can only be in the future for you.

> >You're an SWL with attitude.
>
> My attitude as a BCL, SWL, TVW and as a radio professional is
> that I enjoy all of it. Wouldn't do it if there was no enjoyment.

Bully for you. Continue your enjoyment as listener, viewer and sidewalk
superintendent.

> I might enjoy amateur radio as well, but certain attitudinally-
> oriented rank-status-privilege-by-mode-and-tenure "superiors"
> insist that I must only enjoy what they personally enjoy.

Piffle! If you are holding back for those reasons, I'm afraid you'll be
doomed to being forever an onlooker.

> >You've made no attempt to actually become a ham.
>
> Incorrect. I've never carried it as far an amateur radio license
> examination.

So you rocketed to the fore only to skip taking the exam through which
you'd actually have become a ham.

> >You simply haunt a ham radio newsgroup on the internet.

> Incorrect again, a false assumption.

It's the only conclusion which can be made about you given the
information available.

> >You won't become a newcomer until you enter amateur radio. I'm not

What does "Anderson" do? Could it be that he attributes to others the
characteristics he himself possesses?

>

> Not all Germans are/were NAZIs. "Heil" as a surname is
> Germanic and means a salute or honor as a German word.
> Is Heil a NAZI?!?

The word "Heil" has several meanings. I'm not German but American.
Perhaps you noticed that I don't have a DL, DK or DJ callsign. I don't
speak or read German. I do know that "gesundheit" is a German word.
You didn't use it. In which statement did I mention CW?

> >Does this mean you already have an ARRL tee-shirt?
>

You assume too much. I said "ham bands". Do you frequent ham bands
above 30 MHz?

> >I even
> >have 2m FM QSOs with those who have never passed a code test. After

That is simply sophomoric.

> I have semi-regular communications on UHF above the amateur
> 70 cm band, moved from above the amateur 2m band. NONE of
> the communicators need or needed code testing. After all, WE
> are professionals, carrying on business. :-)

This is an amateur radio newsgroup, Len. I asked you about the ham bands. We don't carry on commercial business.

> I am well aware of the elitist attitude of some that NO ONE can
> possibly discuss ANYTHING involving amateur radio until they
> are authorized by a government amateur license. That includes
> petitioning my government for a redress of grievances, a right
> supposedly granted by the US Constitution.

I feel your pain, Len. All of those lengthy posts here; all of that hard work prepping your anti-code testing diatribe for the Commission and STILL no one takes you seriously!

> I'm also postitive that Heil will be upset (to some degree) by this
> response and will continue with his regular routine of insisting on
> conformist attitudes and demanding that others enjoy what he
> enjoys whether they like it or not. He is not correctable even if
> wrong. Matters not. :-)

Naw, Len. By this time I realize that you've reached true geezerhood and that you'll never actually attempt entry into amateur radio. You exist here simply to stir up crap. To my knowledge, that is your only purpose in showing up.

What's the difference? Ain't nothin' "historical" about this announcement.
What the ARRL (may have) said is that they will accept the (e)QSLs that are
mailed. I fail to see the difference between a mailed QSL that had been
verified and printed by a QSL manager and a mailed eQSL that had been
verified and printed by the eQSL service.

You say that I have an agenda that includes "dishing it out". If you consider self defense an agenda you consider everything an agends. If Cecil and others never dished it out they would have nothing to take.

That's entirely possible. It's also possible you didn't take a test when I was a VE. I can believe that one could take a test today that required no calculations and no marks on a scratch sheet.

That is incorrect. Many times the "window" lasts hours, in fact it usually
goes much
slower than you seem to realize. You gotta spend time watching it go to get the
picture. My much - quoted PSK31/CWID experience was on a band that had gone out
many hours earilier, and was for practical purposes, dead. Except for those
dozen or so tiny signals....

> And the Supreme court says the home is my castle.

OK to a point.

> The government passed the
> law allowing antennas in deed restricted neighborhoods

No such law exists. The applicable situation (CC&Rs) involves
contracts between private indivdiuals/entities. The antenna CC&R
restricytions are not law on their own, but simply cntract
elements to which both parties agreed as part of the contract
that resulted in the transference of the land. Now I am as much
in favor of getting preemption for amateur antennas as you are...but
Phil, Ed and several others have been right on as to the current
interpretations and application of PRB-1 vs CC&Rs.

>... I am saying that
> restricting that use of an antenna to receive TV transmissions only
> oversteps the authority of the government.

It isn't a government restriction, it is a mutually agreed to contract
stipulation.

> They can say you can have
> antennas 6 feet long and no higher then 12 feet at your home, but they can

So if I want to put a 100 foot tower up to recieve SW broadcasts, are
you suggesting the town I live in must allow that?

> No CC&R has a rule that the reception of a broadcasts is against the
rules
> in the USA. The government opened the door for antennas, but overstepped

> it's authority on what radio transmissions you can receive on that
antenna.
> Using your logic if I have a home entertainment center and use that TV
> antenna for FM Stereo reception also I am violating the CC&R.

The CC&R almost always prohibits ANY antenna...the FCC preemption
was created for only very specific exceptions. So far that hasn't
been overturned. In the case you bring up (FM Stereo), let's
be
serious...no one in the neighborhood would likly push the issue
because FM Stereo recievers usually don't lead to neighborhood
RFI issues which almost always are the precipitating incident(s)
which get the nieghbor(s) on the CC&R enforcement warpath.

> You are wrong
> to think the government or neighborhood association has such authority. I

As before, your stawman doesn't help your ham radio use in any case.

> I'm talking to a stubborn person.

More that folks around this newssgroup have had considerable
experience(s) with CC&R applicability, past case law, etc. Don't
kill the messenger just because the message isn't something you
don't agree with. For now, your legal logic has NOT been
the rule of the day in the various cases Phil K and others have
knowledge of or participated in. If you have others, please
share them.

Cheers,
Bill K2UNK

But also usually because of a lack of judgement first
on the ham's part in not knowing about CC&Rs to
begin with.

And, additionally, the courts won't do anything.
If the FCC preemption doesn't apply, the courts (nor
anyone else in the local government) will do anything
with regard to enforcement of CC&Rs. The initiation of any
action will be a civil filing by a neighbor and/or the
homeowners' association to enforce the contract you
signed which included the CC&Rs.

> Guess what there are no antenna restrictions allowed by CC&R's.

Are YOU saying: CC&Rs that prohibit antennas don't exist?

or are you saying that CC&Rs that prohibit antennas are ALL
unenforceable?

If the latter, please help us all by pointing to the case law that
supports your claim. The rest of us here are unfamiliar with
ANY case law that supports that viewpoint.

> The
> government is just trying to say what kind of transmission I can receive
on
> that receiver using that antenna.

The government hasn't said that at all. The government (FCC) has
only said that they (FCC) have preempted certain antennas for certain
specific uses. You can make all the statements you want...BUT
your claims are NOT supported by case law at all.

> The government has overstepped it's
> authority. What are we going to do about it?

Would you be happier if the FCC did NOT pre-empt
the CC&Rs at all? That was the case for many years
and the courts still upheld CC&R restrictions.

> Show me the CC&R that states the reception of shortwave, AM/FM radio or
> NOAA weather broadcasts is prohibited?

They prohibit antennas. CC&Rs don't have to be service specific.
Your strawman application of the federal pre-emption tocover all
recieve applications is, while factually incorrect, would NOT likly
ever be challenged (practically speaking) IF the only uses of
the antenna in question were for recieve of other broadcast and/or
short wave signals. Where the issue goes far astray involves
TRANSMISSION of amateur signals. THAT is when the neighborhood
"enforcers" would probably get on your case and they'd have
prior court rulings on their side. That's the current situation.

> Most TV transmissions are analog
> radio transmissions and the law or CC&R can not make a distinction. The

> transmission doesn't mean it is something else. The government can preempt
> the CC&R for antennas and regulate the size and placement, but it can not
> say you can't use it for receiving legal transmission of any type.

Trust me...neither the neighbors nor the home owners association will
even care IF the only use is RECIEVE. That's just the practical
aspects. The issues of primary concern here are NOT recieve only use, but
rather the ability to erect and use ham antennas...or to simply be able
to operate as a ham.

> The law or a suit by a CC&R association won't hold up in court if someone
> uses their TV antenna for TV and receiving Radio Moscow. Maybe the courts
> won't allow transmitters I will concede that point,

That's THE point. The neighbors won't give a hoot if you recieve channel
5, 55 or Radio Moscow.

> but using it to receive
> a radio transmission is not a violation of a CC&R or the law because the
TV

> prohibits the use of radio receivers then I guess the CC&R will hold up if
I
> attach my radio receiver to it? No, it wouldn't because radio receivers
are
> legal and the Supreme court says so.

This is the ham radio policy issues newsgroup. So far no one has
even identified a case involving prohibition of
RECEIVE via the TV antenna. I agree with Phil K that in
such a case, the FCC won't backup the preemption, BUT
I also believe the type of "mis-use" on a recieve only basis will
never result in any efforts to enforce the CC&R to begin with.

> The law is wrong in trying to limit the reception of a radio transmission

speech.

PLEASE cite even one case where RECEPTION ONLY was
the issue. The issue of reception ONLY just hasn't raised any "test case"
for you to rely on.

Cheers,
Bill K2UNK

Has anyone been brought to court because they had aTV antenna and were
using it for Stero FM reception, or reception of any other signal
beside TV? I am unaware of any such "enforcement effort."

YMMV.

Wrong! In the one case, THE government is the
plaintiff and is directly taking the action to enforce
the ordinance in question. In the CC&R cases, the
government is ONLY providing the venue (the court)
where the issue is adjudicated beween the two
civil parties.

I'll let Phil add any of the legal details, but everything
I know about regarding such transfers of property
do NOT, in any way, invalidate the CC&Rs. That's
no different than the bank mortgage still being
in effect as an outstanding lien against the property
that needed to be paid for title to pas to the "new
owner" who inherited the property.

Kim:

I'm good at a lot of things, but I'm not good at anything I haven't
tried. That's the beauty of the code testing requirement -- it got
me (and a lot of other people) to try something they may have
thought they couldn't do. I didn't get there by someone "selling"
me on the Morse code. The only thing I was "sold" on was the
thought of unrestricted HF phone privileges. The code testing
requirement to get there is the thing that made me realize that
CW was a useful and fun mode. I never would have learned this
in the absence of a code testing requirement, and neither will
the vast majority of future radio amateurs.

>CB, can the association prevent me from doing so?

Phil Kane never discussed whether your neighbors are going to bother to enforce the CC&R against antennas.

Bill was trying to explain to you the difference in meaning between "will enforce," "might enforce" and "can enforce."

Of course your neighbors or association "can" enforce violations against CC&Rs. They "might" do so, but Bill has said that it is unlikely that they "will" do so.

This, too, is starting to resemble the "what was said/what was heard" series from the funny papers.

Larry has placed himself in charge of the crusade against such callsigns. He has insisted that he is not facincated with Kim, so I am sure he will share the letters he has sent to the callsign holder, telling him/her how he or she is ruining ham radio. If he has carped on W1SEX as often as he has carped on Kim, I will believe him when he says this is not personal fascination with Kim that is behind all the hoopolah.

Phil is not making that claim. He is telling you that the FCC pre-empts antennas used only for the purposes defined in the OTARD rules and that they do not pre-empt antennas also used for other purposes.

If your statement is that Phil is claiming that the pre-emption applies only to antennas used as outlined in the rules, it is not Phil making that claim, it is the FCC.

What was said... what was heard...

This guy is dangerous, he is one of those take matters into your own hands type.
I have heard his broadcasts and they are strange. Why doesn't Ham Radio have a
15 minute maximum broadcasts per week rule. I can only see more people like him
getting licensed and turning ham radio into a shortwave radio service.

> The only entity that prohibits how I use the antenna is the US
>government after the preemption.

This is incorrect. What prohibits the antenna is the CC&R. The US government pre-empts that CC&R if the antenna is used only for the purposes of the pre-emption.

>The government states I can not listen to
>90.3 MHz on it, but I can receive at 88.6 MHz on it.

What regulation? Can you cite anything to back this claim?

>The neighborhood
>association has no such rule.

How odd. The neighborhood association is the one that has the CC&R, the US governement pre-empts it if it is an OTARD antenna, and you think that this is all the US governement.

> The government can say we preempt CC&R's, but it can not tell me what to do
>with that antenna once that antenna is at the home as far as reception of
>transmissions and maybe transmissions of radio signals.

Tell us when you file the court case. I would love to follow it to see how it ends up.

> Everybody in a CC&R neighborhood already has an
>exemption for TV only antennas, why not simply expand that exemption.

ARRL asked the FCC to do so for amateur antennas. They said no. I think it unlikely that the FCC would say yes to an extension of what the ARRL asked for to include other antennas, too. The Commission was pretty clear that they are very reluctant to pre-empt CC&Rs and will only do so in cases where they are required to do so by Congress.

> 73,
> Ed Hare, W1RFI

Yes, Ed ... but the argument is bogus and we both know it,
because much more reliable (better weak signal, fading,
and QRM performance) modes are readily available to hams
who are willing to accept (and learn a bit about) something new.

I would admit that those modes require some "hardware assist"
and therefore are often rejected by those who have an emotional
hang-up about manual skills, "minimialist radio" or who simply
don't understand the reality that with today's technology, a radio
build with VLSI ICs can be (for all practical purposes) just as reliable
as a simple CW rig.

The other argument ("I'll whip up a CW rig from the remains of a
trashed TV set in an emergency.") is, of course equally ridiculous.

The REAL argument behind MOST pro-coders' desire to retain
Morse test requirements is a desire to have the government
mandate that everyone MUST learn Morse, in hopes that a few
will decide they like it, so that the procoders don't have to expend
any effort recruiting new Morse users themselves.

I got what you said, Joshua. I probably understood CW the first maybe month
or two after I got my license, with a gradual loss of knowing it any more
after that. Today, 6-7 years later I think, I couldn't recognize a thing,
I'm sure. I doubt I am the only licensed person as such.

>
> The General Class and above licensees before April 2000 demonstrated an

That doesn't mean they can do it now at all. My dad was Chief Petty Officer
in the Navy at his retirement. He was a radio officer and used CW routinely
for nearly all of his 20 years in the Navy. He retired about 40 years ago.
He studied for about a year to pass his 5wpm CW.

>

Again, I state that even if someone does not *LIKE* CW, it takes no liking
(or knowledge of CW) to know SOS. Most people off the street know CW SOS,
the recent SOS pad commercials enhanced that even further.

> But, addressing your divergence, the operator would be up the proverbial

I recognize the SOS, yet didn't understand the rest and don't care to look
it up on a chart.

Several of you are thinking that my statements about the reality of relying
on CW as a mode are statements against CW. They are not. But then, you're
all prone to digging those holes for yourselves so you have my good wishes.

And I'll bet that Dick would just LOVE to see several grades of
clothes-washing permits, based on a demonstration of how fast
your could wash a given amount of clothes to a prescribed degree
of cleanliness.

Of course, this would have to be done on an old-fashioned
washboard in a wooden tub ... no washing machine
assistance allowed, because " 'REAL' clothes washers do it
manually and shun the use of washing machines."

I'll bet thatDick would even go for a special "Extra Class" permit
for those who would forego the washboard and tub and do their
washing on the rocks in a stream ("like in the good old days") :-)

I'm not embarrassed at all, Joshua and I think your story of their having
using CW to be found is nothing more than an urban legend. So, you're
coming from the angle of only victims using CW for emergencies!!!!???? Then
I'd rely far less on CW.

And, I'll broaden my invitation. If you are so put off by my example of the
WTC disaster--the WORST--then you find any disaster you'd like where a net
was up and operational using CW to relay messages out of the disaster area.
I am *NOT* talking about H&W, etc. I am talking about where CW was the only
method available because of power failure, downed antennas, etc., etc. Now,
if you're going to come back at me with your desperate "are you embarrassed
enough" crap, then you can shove your defending CW as the mode of
reliability up your proverbial place where the sun don't shine. Urban
legends indeed. I suppose that is equivalent to the gents in the submarine
who were supposedly tapping out CW on the hull...uh huh, yeah, right.

Yes, Phil ... (now, after having answered Ed, reading replies) I
knew Ed had me on that one on a technicallity the minute I saw
his question.

However, I'm sure that, despite his inability to resist having
some fun with me, that Ed knew I was referring to the "normal"
HF ham bands :-)

> to maintain their license.
>

I would disagree, Mike. I think your inference, and correct me if I am wrong, would be that longer-licensed hams may have passed their tests, but couldn't pass today's tests due to advanced technologies, frequency changes, etc. I would tend to agree with the idea that a longer-licensed ham probably could not pass today's exam, but I don't think it's necessary--strictly from an administrative viewpoint. If a longer-licensed ham hasn't been paying attention to band/frequency changes, that's their problem. And, in most cases, hams just aren't going to experiment with a new technology without having the support and encouragement of others who've been doing it. At least I don't think someone would.

Hell, I don't know what you'd call it: photographic memory, whatever. It doesn't matter what causes it, but if you study all the test questions with only the right answers and have never even seen the wrong answers, you are going to remember the right answer more often than not. I bet there's even some kind of mathematical perfectness to it where, sure you're going to miss some, but not enough to fail.

>
> I used the Extra pool questions as a study guide. Any answer I got

> took days to get through the thing.
>

Hmmmm, don't know about the Extra pool--simply because I imagine there's loads of numbers. I don't seem to be able to remember numbers well at all. I supposed I *had* to pass some of the frequency questions on the test, because I think each segment has a minimum number of questions that do have to be answered correctly. But, I can tell you that I simply glazed over those questions because remembering numbers--especially ranges of numbers--is a whole 'nuther ballgame.

I must put a disclaimer in here, though. I *think* when I did the memorizing before, there weren't that many questions in the pool for Novice and Tech. I hear that the number of questions in the pools now are huge. I plan on upgrading to General (no further--as I said, remembering number stuff, for me, is just way more than I want to do--but I haven't taken a serious round with the new pool yet. I also don't know anyone who's got the pool ready with only the right answers. What I'll do is get the question pool printed and mark out all the wrong answers, go back and study the question with the right answer. Do I learn from this? I think one would *have* to learn something. However, I don't think I learn much that way at all. I am just taking advantage of a system that exists... I'll learn what I need to later.

>

And, there is the perfect example of why it's not all that important to focus on the tests. If you know enough to operate within the rules and laws, and you are that active a ham, all the rest will come.

Steve do you suppose that you might find time to grow up soon?

Perhaps you could form a new group "alt.hate.len.carl.myself" and
post there. That way kids investigating amateur radio would not
have to wade through crap like this and become disenchanted.

Why don't you take this to email and spare the rest of us the
embarrassment of being the same species as you.

That is not morse code, that is flicking blinds in desperation to get
noticed so that someone will know there's someone on that floor. That some
media person translates anything like that, flicking the blinds, banging on
the pipes, etc., as Morse Code is their mistake. I doubt someone was
literally doing anything more than flicking the blinds...the only way to
"wave a flag" at that point. And, no, flag waving should not be translated
to mean that someone would be using signaling.

You've got to be kidding, Dick. 95% of the time you initiate the conflict.
Someone expresses his/her honest opinion and you call them dirty names.

There's no stretch at all, Dave. I don't like CW for me, it goes no farther than that. I draw the conclusion that it is not a reliable mode for emergencies because of a lack of operators and/or its prior use in recent disasters. I draw that conclusion based on stories I've read and hear about. My offer was to see if I am wrong; and the only way to do that is to have *real* examples of where CW has been used in a net condition during an emergency or disaster--other than for H&W, because it *IS* my opinion that CW is probably used more often in trafficking. However, on a second note, it is also my opinion that it is probably used less today than ever before, and will be used less and less as time goes on.

We provide communication service to our public service and regulatory agencies during an emergency or disaster. Those entities do not use CW themselves. Why would we?

There is no "what if" Dave, there was an invitation you apparently cannot meet. I see I made my point. Glad you were able to understand.

Dick, if the doctor told you that you had hours to live, you would
consider that "fleeting". "Fleeting" means "transitory". Would it
sound better to you if I said there is a transitory window of
opportunity where CW gets through and SSB doesn't?

All HF hams were required by circumstances (forced) to take a code
test, Larry. Otherwise, they wouldn't be HF hams, would they?

Ed,

Having been in Mexico City all of the past week, as a member
of the US Delegation to the CITEL PCC III regional radio regulatory
conference, I'm afraid I've been VERY selectively reading the over
1000 new messages in this group today and don't know how or on
what subject Jim "got me."

However, if he did in fact, I will follow your advice :-)

WRT to the CITEL conference ...

Just because I *have* to see the reaction from the Dick and some
of the other PCTAs, I simply *can't* resist reporting that the FCC
asked me to present the Draft US Proposal on WRC-03 Agenda
Item 1.7.1 ... the revision of S25 of the ITU Radio Regs :-)

This proposal, originally drafted by the ARRL, with some modifications
agreed by NCI and others in IWG-6, and approved by the WAC, FCC,
NTIA, and State Dept., supports the suppression (elimination) of S25.5,
the international Morse test requirement :-)

It will be VERY interesting to see what Dick and some of the
others spew on THIS :-)

Y'all are cracking me up. First, there's the urban legend about window blinds being "flicked." Preposterous. Anyone know how far back from that building one would have to be just to be able to *SEE* the window area, let alone see clear enough to see "flicking" blinds? Let's just leave alone the fact that obscurity was probably at a *MAXIMUM* due to smoke, dust, and debris clouds. GOOD GRIEF. Second, there's the urban legend story about the FDNY personnel. Anyone know how *IMPOSSIBLE* it would have been to hear such tapping--Hell, I'd daresay even BANGING--in such an environment???!!! Give me an everliving break.

Pretty lame, Ed, and not just a little insulting. There is no "she" involved. Just

a few assholes like Cecil, and you're showing a lot of signs yourself.

Ah, yes, they will always be as readily available as radiotelegraphy, and
will be present, ready to serve each and every emergency.

What is bogus is *you*. And we both know it.

How's the SSB DXCC going? Been on PSK31 yet? MFSK? HELL?CLOVER?
Get back to us after you spend some time on AMATEUR RADIO digital.

You're ignorance is showing again, Genius. When a radio op is in the
process of passing urgent communications and the band dies so that
SSB can't do the job, and CW still can, the time remaining to pass the traffic
on CW is almost always far more than enough, before the band totally tanks-
if indeed it happens on that particular occasion that it actually goes completely
dead so that CWwon't get through, either. It certainly isn't "fleeting".
Sometimes it doesn't go that dead at all.

> > kd7pos
>
> Publicly? Do I think they're stupid?
>
> Kim W5TIT

Actually, the ARRL *routinely* notes comments made by others
in FCC rulemaking proceedings by filing reply comments. And
they often solicit their membership to file comments or reply
comments on issues of importance ... this is fine and well,
and neither I nor NCI have a problem with it ... however it seems
that Josh would deny NCI the same rights of participating in
the due process of FCC proceedings or the right of free speech
of informing its membership items of particular interest.

Case in point where the ARRL is doing EXACTLY what
Josh (somewhat incorrectly) accuses NCI of doing (with
the implication that it's "a bad thing") ... the current
proceeding where the ARRL opposed changes in Part 15
rules requested by an outfitcalled SAVI ...

The ARRL commented publicly (both in the record of the
proceeding, and in QST, bulletins, on the web site, etc.) ...
in this case SPECIFICALLY asking members to make
their views opposing SAVI's requested rules changes
known (somewhat different than simply informing the
membership in a summary fashion as to the tone and
contents of someone's comments - without asking them
to take any specific action, as NCI did in the case of Mr.
Tynan's comments).

Nothing wrong with that ... when ARRL does it (which,
as I said, they do routinely when it suits their purpose) ...
however, if NCI even MENTIONS someone's comments
(without making any specific request to the membership
to file opposing comments), then, THAT is, of course,

"a bad thing" (according to Josh ...)

Baloney ... the paragraph quoted by Josh simply reported
the facts surrounding Mr. Tynan's comments to the membership.
NCI filed its own reply comments in response to Mr. Tynan's
comments (which is, of course, our right whether Josh agrees
or not ...)

Please provide one instance of an ARRL press release or news release saying that a person or an organization has posted a comment (or, even bettter, a "reply comment", such as NCI did) on a proposed rulemaking.

> Case in point where the ARRL is doing EXACTLY what
> Josh (somewhat incorrectly) accuses NCI of doing (with
> the implication that it's "a bad thing") ... the current
> proceeding where the ARRL opposed changes in Part 15
> rules requested by an outfitcalled SAVI ...

The ARRL is amking a comment on a petition for rulemaking, not a reply comment on somebody else's comment on a proposed rulemaking. Therein the difference. I'm surprised that someone as prolific a public commentmaker as yourself doesn't know the difference.

Oh wait... this is NCI we're talking about...

> Nothing wrong with that ... when ARRL does it (which,
> as I said, they do routinely when it suits their purpose) ...
> however, if NCI even MENTIONS someone's comments
> (without making any specific request to the membership
> to file opposing comments), then, THAT is, of course,

You do understand the difference between a "Petition" and a "Reply Comment", right Carl? When has the ARRL publicly noted a "Reply Comment", or even a "Comment"?

> Baloney ... the paragraph quoted by Josh simply reported
> the facts surrounding Mr. Tynan's comments to the membership.
> NCI filed its own reply comments in response to Mr. Tynan's
> comments (which is, of course, our right whether Josh agrees
> or not ...)

More revisionism - I already *stated* that it was your right to file a reply comment. If you're going to insinuate that I think otherwise, don't do it in public - it's just another embarrassment on your part.

You have stretched your case far beyond reality in almost any
situation. Just how many times has anyone been found
in contempt.

Additionally, I don't know (Phil K query follows) if
being jailed for contempt of cout qualifies as a criminal
charge/finding?

Regardless, your constant referencing to criminal
is at the extreme end of the spectrum regardless of
what you want others to believe.

No cigar.

Can ya give me just one--that's all I'm asking for, just one--example of CW
communication during a disaster or emergency in these days? I'll even make
it easy for you, does the Hurricane Net use CW communication for
anything--other than H&W? I have always heard of CW being this great tool
for emergencies, but never have heard of an example of it. I *know* that
there is a CW traffic net; but most traffic these days is contrived for the
benefit of having a net (net messages back and forth, etc.).

I took that Josh was asking for an example of the ARRL "slamming" someone
for a comment. I don't think they would do that--they'd be stupid if they
did. And, as to noting comments, I don't think they name the person do
they, when they note that "the membership" feels a certain way? Isn't it
more a general reference to "comments that they've received/heard etc.?

I don't care if you included, or didn't, Tech+. My statement stands for
even General and Extra class hams. In fact, I *KNOW* Extra class hams who
haven't used CW in years if ever and have told me they couldn't do it now.

As to illiteracy, you really place way too much importance on a mode in ham
radio if you relate it to illiteracy for one not to know it. You should be
embarrassed to use illiteracy as a value judgement against someone--there
are many extremely intelligent people who cannot read.

>
>
> Not according to Phil Kane.

Phil was addressing the probability of discovery
wherein the other use was TRANSMISSION. Your NEW
hypothetical (new of the last 2/3 days) has focused on
RECIEVE only. I won't claim to speak for Phil,
but I'd bet he'd not likly expect the association or
any of the neighbors to be able to "detect" any
"extended receive" functionality. No detection, then means
no case for the association or a neighbor to pursue.

> Now what if I also use that antenna for TV &
> CB, can the association prevent me from doing so?

If they know about it...yes they can. Would they know
about it at all...it depends. If CB use involved
TRANSMISSION, then there's a possibility of detection.
IF CB use involved RECEIVE only, detection and
subsequent court action would probably never
happen. Such recieve only situations are nothing but
academic discussions.

Such has often been included in QST reports. Maybe later today
I'll look a few up. More to the issue, might anyone at ARRL
even claim to have never reported on such matters.

> > Case in point where the ARRL is doing EXACTLY what

Josh,

Your original trip down this path claimed that the
reporting by NCI of another person's comments
was done to generate harassment against the
opposing commentor.

The embarrasment, if any, belongs to you in that
you don't believe that ARRL and or hundreds of other entities don't
report on comments filed by opposing parties in their repective
organization's journals (e.g. NTIA, ARRL, etc.). Such reporting
is common, normal and done for comments filed both
as original comments and/or reply comments.

No cheers,
Bill K2UNK

NCI didn't "slam" anyone either. The posting of the individual's
actual text is all that was done.

> I don't think they would do that--they'd be stupid if they
> did.

What if they did? What is stupid about attacking the
comments of an opposition party?

> And, as to noting comments, I don't think they name the person do
> they, when they note that "the membership" feels a certain way? Isn't it
> more a general reference to "comments that they've received/heard etc.?

I'll have to look at some past QSTs. Even if so, the reporting of
an individual's comments by name is nothing more than
that...(i.e. reporting)...as in Journalism 101.

Cheers,
Bill K2UNK

Yes, I know the difference ... and the ARRL *does* make
reply comments on the comments of others when it suits
their purposes ... and ususally those items are mentioned
in ARRL news ...

To assert that this is false is a blatant falsehood on YOUR part.

> Oh wait... this is NCI we're talking about...

Careful, your *real* agenda (trying ... without much
success ... to discredit NCI) is showing ...

I didn't "insinuate" that you said we didn't have a right to file
comments ... I only *stated* that we had the right to do so, whether
you agreed (with our comments) or not. Apparently you misunderstood
what I was saying.

A typical lie from the board of NCI.

Is this "[t]he posting of the individual's actual text"?:

"William A. Tynan, W3XO, Files Scathing "Reply Comments" in RM-9673. Bill Tynan, W3XO, a well-known VHF DXer, former QST columnist, and former President of AMSAT NA, was involved in the filing of and is apparently an ardent supporter of the CSVHFS' Petition for Rulemaking. A number of major organizations have filed comments in opposition to the CSVHFS' Petition, including the ARRL, the Texas VHF FM Society, the 220 Spectrum Management Association of Southern California, and NCI. In his "Reply Comments" W3XO systematically attacks all of these comments in opposition to his desired outcome in the Proceeding, questioning both the motives and the integrity of the organizations in question. He also insinuates that new operators are at the root of the (alleged) "problem" which the Petition "seeks to remedy,"..."

Well, it wasn't the media who said it was morse code, it was Mr.
Quinones.

> I doubt someone was literally doing anything more than flicking the blinds...
> the only way to "wave a flag" at that point. And, no, flag waving should
> not be translated to mean that someone would be using signaling.

Nah - I'd wager that if someone just saw a signal without intelligence
(just on and off with no particular timing to it), they'd say they were
signaling. If they saw a pattern to it, they'd say it was morse code.

Ignore the first story, however - I have serious doubts as to the
credibility of the report I read. Oy vey - I need to check these things
more carefully! Stupid, stupid me...

And I seriously do apologize for the righteous indignation towards you
eariler. I promised myself when I started posting here that I wouldn't
fall in that particular usenet trap of being insulting, obnoxious, etc.
Well, *that* certainly didn't work out. Many apologies, for whatever it's
worth.

What you have described is a fleeting, transitory period of time, Dick. Why
don't you ever crack open a dictionary before embarrassing yourself? Nothing
I said contradicts your above statement. Nothing you said contradicts what
I said. In fact, your description is one of the dictionary definitions of
"fleeting".

Hold it right there. Tell the WHOLE story.

The code test speed for US licenses (except the old Extra) was 10 wpm from
1919 to 1936.

>at one point, the ARRL asked the FCC to increase
>the speed to 12.5 wpm ...

That's right - in 1936. They ALSO asked the FCC to revise the WRITTEN exam
so that it required more radio knowledge in order to pass.

> SPECIFICALLY to limit the number of
>hams "because the bands were too crowded."

Incorrect.

The concerns were:

1) the POPULAR bands of the day were overcrowded
2) many newcomers were getting on the air with insufficient skill AND TECHNICAL
KNOWLEDGE for the conditions of the day
3) the explosive growth (the number of US hams TRIPLED from 1929's ~16,000 in
less than 5 years)
4) high turnover (as many as 40% of hams not renewing, at a time when the
license term was 3 years
5) increasing numbers of TECHNICAL violations (out of band, harmonics, hum,
chirps, etc.) wreaking havoc on other services and threatening the reputation
of the ARS.

Many of these
violations were the result of inexperienceand a "don't care" attitude.

The solution proposed by the ARRL leadership and accepted by the FCC was a
slight rise in the code test speed AND new written tests. Funny how the written
test changes are forgotten.

>(at the time, the
>total number of hams was a SMALL fraction of those now licensed,
>so the argument was, on its face, absurd ...)

Incorrect again. Carl, do you know what the amateur bands were in 1936? Do you
know how they were used? Do you know what the typical amateur station equipment

was like in those days? Or how many hours/week a typical amateur was on the air?

The argument was NOT "absurd" once all the FACTS are known.

>The FCC felt that 12.5 wpm was an "awkward" speed to test
>for, so they rounded it up to 13 wpm ...

Yup. And it stayed there for just 15 years - 4 of which were WW2. Then 5 wpm was added.

>Was this decision made "for good reason" ???

They thought so at the time - both the FCC and the ARRL. Are you saying the FCC made a bad decision back then?

>Given that it's been proven that our bands can support FAR more hams
>than the small fraction of today's population, then licensed,
>the underlying argument of "overcrowding" was invalid, therefore
>the decision to increase the code test speed to artificially limit
>the population was flawed.

Incorrect. It all depends on the methods used and how much a typical ham operates. These things change over time.

Do some math using realistic-for-1936 and show us what ya got.

>Note that this goes back MANY years and does not reflect
>in any way on the current FCC's ability to make rational
>public policy decisions.

In toehr words, if you agree with them, the decisions are rational, but if you don't, they are irrational.

Right... Don't join. When they come to take away your frequencies, your operating privileges and eventually your entire hobby, just lock yourself with a couple of buddies in a shack in Montana and make an armed stand-off against the feds.

A typical CB mentality if I've ever seen one.

I doubt that. With so many internet radio stations, it's easier to set up a broadcast on live365.com or some other web radio venue rather than use shortwave in the amatuer bands. Internet broadcasts have more of a chance being heard since more people have computers and net access than have shortwave receivers.

If the story is true, that's probably what *really* happened - slightly
embellished to prove how important morse code is.

>
>I doubt it.

According to lore on this newsgroup, a reporter (who curiously
understands morse codes as used with window shade blinker
systems) has given the "facts." Another reporter on another
story reporting someone who "had ridden down a collapsing
Trade Center building and survived" had his story discounted.
I'm not going to touch the "last photograph from on top of the
WTC" that has circulated on the Internet...

According to another working journalist who does not know any
morse codes, the window blinker was formerly the radio operator
on the Motor Vessel Oak and was trying to contact a ham on
a Grassy Knoll near the WTC. Someone took his picture while
riding down with the collapsing building but both were arrested
by the FCC police who were quick on the scene via black
helicopters. The camera and film was confiscated by the NSA.
Both are being held at a secret location formerly used by the
Vice President. No one in the US government confirms this
information so it must be assumend that a great conspiracy
is keeping everyone from knowing the Real Truth.

>It will be VERY interesting to see what Dick and some of the

>others spew on THIS :-)

The full story as of the end of November, 2001, may be found on the FCC website as DA 01-2764, (shortened title) WAC Preliminary Views and Draft Proposals. That seems to be incomplete since its 15 pages do not include all the agenda items for WRC-03. It does begin with Informal Working Group 6 decisions on agenda item 1.7 (three) in that S25.1 through S25.6 are all re-worded. S25.5 has a complete rewrite over the existing form and simply omits any mention of morse codings; it does not "eliminate" or "suppress" the need for morse code testing, it just doesn't mention it. See pages 3 and 4 for the new wording.

According to DA 01-2764, credit is given to the IARU and no one else for the revisions on all of S25 (page 2).

Neither is there any indication in that document that these Preliminary Views and Draft have been "approved" by either NTIA or State Department. No doubt there are other documents which contain "more firm" stands on WRC agenda items 1.7.1 through 1.7.3. Those could be misfiled, not-yet-on-listings-due-to-terrible-workloads-preventing-prompt-handling, or just unfinished and NOT IN PUBLIC ACCESS YET.

Note: Corrections on statements in this message will never ever be rejected. They may be ignored, however, and that will offer a moral victory for someone because no one can prove rejection. :-)

In article <3c790559_2@newsa.ev1.net>, "W5TIT - Kim"
<seventythree@eightyeight.net> writes:

>Is the statement "my work in Guinea-Bissau is not an issue" anything like "I
>did not have sex with that woman?" :o
>
>Kim W5TIT

Leaving aside definitions of "is," let's define Guinea-Bisseau and "work."

Guinea-Bisseau (or Bissau) is a small middle-Africa-general-location
country of 1.3 million whose chief exports are cashews and peanuts.
[see any almanac for details]

It is stretching incredulity to attempt picturing this tiny former colony
as being "important" in world affairs or even general African affairs,
trade, religion of any kind. It doesn't seem to have attracted press
attention to any level higher than "filler" items over the last three-
plus decades. It is definitely not a "hotbed of intrigue and mystery,"
even in fictional works. It doesn't appear to have any strategic
military value for air bases or ports to any other nation except
maybe its immediate neighbors.

"Work." Department of State communications was dragged kicking
and screaming into modern methods when the Cold War began
(acknowledged to start about 1948). State had been using standard-
issue non-updated code books until 1943 while the military had much
more secure rolling-code machine encryption in 1938 (never any
evidence that it had been compromised although German crypto
training regularly broke State book codes as class exercises). We
can skip over the details on methods-machinery with only a mention
of the USS Pueblo's capture almost intact by North Korea (mass
replacement of crypto equipment throughout government right after),
espionage by USN Chief Warrant Officer Walker and his family
spy ring that provided the USSR with full details, including tech
manual photographs and key lists, of the replacement crypto
systems. A second mass replacement of crypto equipment for the
US government, this time costing billions but aided by great leaps
in Information Theory yielding new methods in cryptography.

Communications work is important. In an age where the start of
nuclear holocaust may be only 20 minutes away (first detection of
an incoming ICBM), government needs quick, secure
communications. However, the "work" is often over-exaggerated
and self-glorified or even romanticized in descriptions to lay people.
Government communications is procedural for many reasons and

those involved must ALWAYS be aware and vigilant against violations of "sensitive" communications. In the main, it is simply routine, "following the book." Security should not have any questions regarding its existance at any level whether from a CIA station chief at the US Embassy in Moscow down to a Petty Officer 3rd radio tech on the supply ship "USS Bilgewater."

However, the word "code" has many meanings and appears strange and mysterious to lay people, has many colorings of mystery, secret things, even arcane magic. It is wonderful fertilizer for works of fiction, enabling quite a few authors to grow acres of print, accumulating silos of money. Who can refute them? The real details are supposed to be "secret" and cannot be revealed on some imagined charge of treason! Not quite so in the real communications world.

The existance and wide variety of voice scramblers available in the US government was shown to the public during the Iran-Contra investigations. Their technical details are rather well known within the electronics industry. The basic technology is equally applied to digitized telephony that many use every day without realizing their call is digitized. It is transparent to the user. Civilian businesses have been using commercial voice scramblers for at least two decades. Security lies in the method-algorithm of encryption-decryption, not the ordinary electronic details. The method is sufficiently complex that decryption cannot be accomplished within a reasonable time.

I've mentioned the US military's SINCGARS manpack to vehicular standard small-unit land-forces radio now in its 13th year of operational use. Not only does it have compatible COMSEC (Communications Security) methods for voice or data but it is also a frequency-hopper. The main manufacturer is General Dynamics Fort Lauderdale division. That division has a website and lists the technical details of the radio family. The subcontractor for the ICs containing the encryption-decryption circuitry is Nova Engineering who also has a website. Any SINCGARS could be fully reverse-engineered, even down to the complete details of the ICs, yet all those man-years of work would NOT enable an unfriendly to decode and use such communications in the field. The method involves the entire system of use, everything from the "hop set" (part of which is the "key list" of older crypto equipment) through the algorithm. The SYSTEM is so robust that intercepted information cannot be used in any reasonable time.

The long-time morsemen keep implying that morse code is somehow in the "importance" or "vital nature" area as cryptographic code. Nonsense. Rubbish. They are not related except for having the same letters in English. That one insists that morse codes were "standard procedure" in

State Department communications defies known procedure
on radio circuits established throughout the US government
in the 1940s...order-wires and "synchronization" (of times
and frequencies) used the same mode as for regular traffic
on that mode. Anything else is snow-jobbery to an audience
who has little information on either old or new radio procedures
outside of amateur radio.

I'm sure some snow machine operators are able to avalanche
the unfamiliar. To those who've done it and know the systems
they are simply stuffing snow shoes into their big mouths.

You've stated that you feel amateurs *should* be insulted by Kim's callsign.
Don't presume to think that every amateur *is* insulted. Who are you to say
what is insulting and what isn't for someone else?

OK ... no problem ... nothing to hide here.

> The code test speed for US licenses (except the old Extra) was 10
> wpm from 1919 to 1936.

No argument so far ...

> >at one point, the ARRL asked the FCC to increase
> >the speed to 12.5 wpm ...
>
> That's right - in 1936. They ALSO asked the FCC to revise the
> WRITTEN exam so that it required more radio knowledge in
> order to pass.

The letter refers to "A slight stiffening of the basic examination,"
then *discounts* the written exams as a means to the end of
limiting the number of hams. Clearly, from the letter, which
was published in an ARRL publication, as indicated, the
emphasis was on code as a filter to keep people out of ham
radio.

> > SPECIFICALLY to limit the number of
> >hams "because the bands were too crowded."
>
> Incorrect.

Here are quotes from an article posted on the NCI website.
The specific URL to read the entire article is:

http://www.nocode.org/articles/filter.html

Begin quote from above-referenced article
****
In Clinton B. DeSoto's classic book, Two Hundred Meters and Down, The Story of Amateur Radio (Published by the American Radio Relay League in 1936) is the following passage on page 179. DeSoto was a highly placed ARRL official at the time his book was written and published, so we assume it represents League thinking.

"The growth of amateur radio and the total number of amateurs will doubtless be controlled in the future. The present condition of the amateur bands, while not intolerable, approaches saturation. ... [The number of amateurs at the time was 46,000] DeSoto goes on:

"Obviously no competent person can be denied the right to become an amateur. The only justifiable restrictive procedure is to raise the standards of competency. This has already been done to the point where it is many times more difficult to secure an amateur operator's license than it was ten years ago. Increasing the code speed equirement is one step in this direction. ..."

DeSoto goes on to say that additional restrictions are not needed since "The total number of licensed amateur operators has remained relatively constant during the past two years. A slight stiffening of the basic examination, together with the increased code-speed requirement, would accomplish the desired result."

At the 1936 annual ARRL Board Meeting held in West Hartford, CT) the Board "...voted to ask [the] FCC to raise the code speed requirement on license exams to 12.5 wpm..
[From Official Broadcast 671, May 10, 1936]

A letter was then sent by Mr. K. B. Warner, ARRL General Manager, to the FCC requesting a code speed increase from 10 to 12 words per minute. Here are some quotes from Warner's letter:

"It has become desirable to raise the general standard of qualification for an amateur operator license. Observations show that too many licensed amateurs do not possess the qualifications presupposed by the regulations. Considering that the written part of the examination may be mastered with relative ease, the chief opportunity for a better selective process resides with the code examination. ..." [That is pretty clear!]

"A general raising of the standards could help to confine the obviously limited facilities of amateur radio to those who have at least nominal aptitude for the same. It seems indicated that this situation could be best treated by an increase in the code speed. Consequently the League now requests the Commission to increase the code speed required in the amateur examination

from ten words per minute to twelve and one-half words per minute."
****

It's clear from the above that the ARRL, at the time, wanted to
"control the population" and that the bands, with ~46k amateurs
were "approaching saturation."

The referenced letter also states that "the chief opportunity for
a better selective process resides with the code examination."

The final paragraph above ALSO indicates QUITE CLEARLY
that the increase in code speed which the ARRL requested was
TO CONTROL THE NUMBER OF AMATEURS.

>
> The concerns were:
>
> 1) the POPULAR bands of the day were overcrowded

I find that hard to swallow with well more than an order of
magnitude fewer hams than today ... also, even if it
were true, which I don't buy, a better solution than
"controlling the population" would have been to encourage
folks to spread out a bit by using the other bands, which
you insinuate were not "so crowded."

And what about the "superior spectral efficency of CW,"
which was the predominant mode at the time?

> 2) many newcomers were getting on the air with insufficient
> skill AND TECHNICAL KNOWLEDGE for the conditions of
> the day

Sorry, but there is no indication in the letter requesting that
the code speed be increased to control the population that
the ARRL sought "better written tests" ... only that they asked
that the code speed be increased to keep people out.
(There was a vague mention of "a slight stiffening of
the basic examination," but in the end, the ARRL doesn't
specifically request a tougher written test, nor does the FCC
appear to respond with such action ... only an increase in
code speed ... see the entire article ...)

> 3) the explosive growth (the number of US hams TRIPLED
> from 1929's ~16,000 in less than 5 years)

Still, the indications are that there were ~ 46k hams .. FAR
fewer than the 600k+ of today ... and at that time, I would
suspect that far more hams were using CW ... which is,
according to its proponents, "extremely spectrally efficient,"
so, even given that receiver selectivity was not as good in
those days as today, I find the argument unconvincing.
(I don't believe that receivers were more than 10x worse

than today, and there must have been FAR fewer hams,
as a percentage using any form of voice.)

> 4) high turnover (as many as 40% of hams not renewing, at
> a time when the license term was 3 years

Neither is this mentioned in the record to which I referred ...
and if so many hams were dropping out, why the concern
that the bands would become "saturated?"

> 5) increasing numbers of TECHNICAL violations (out of
> band, harmonics, hum, chirps, etc.) wreaking havoc on
> other services and threatening the reputation of the ARS.

I see no direct mention of this in the ARRL's letter to the FCC,
either ... if it was, indeed, such big problem, why didn't the
ARRL mention it? Why did they *discount* improvements
in the written tests and focus ONLY on increasing code speed?
(And why only in reference to "controlling the population?")

> Many of these violations were the result of inexperience
> and a "don't care" attitude.

Lacking supporting evidence (which I'm open to consider),
I can only suspect that this assertion is your opinion or
conjecture.

> The solution proposed by the ARRL leadership and accepted
> by the FCC was a slight rise in the code test speed AND new
> written tests. Funny how the written test changes are forgotten.

"The written test changes" were not "forgotten" ... they were not
mentioned in the ARRL's request. In fact, the written tests were
specifically discounted in the letter as a solution to the "problem,"
and instead ONLY an increase in code speed was requested.
(And again, only in the context of "controlling the population.")

> >(at the time, the
> >total number of hams was a SMALL fraction of those now licensed,
> >so the argument was, on its face, absurd ...)
>
> Incorrect again. Carl, do you know what the amateur bands were in
>1936? Do you know how they were used? Do you know what the
> typical amateur station equipment was like in those days? Or how
>many hours/week a typical amateur was on the air?

I wasn't born at the time ... were you? (If you are that much older
than me, were you licensed and on the air at the time?) However,
I recognized above that while receivers weren't as good as they
are today, there were also more than an order of magnitude less
hams than today and voice operation was not the norm, with most
operators using CW.

> The argument was NOT "absurd" once all the FACTS are known.

I still think the argument was absurd. It's not the first time you
and I have disagreed ...

> >The FCC felt that 12.5 wpm was an "awkward" speed to test
> >for, so they rounded it up to 13 wpm ...
>
> Yup. And it stayed there for just 15 years - 4 of which were WW2.
> Then 5 wpm was added.

Yes, for a novice license, good for 1 year, non-renewable.
"Learn to beep fast fast or get the hell out of ham radio."
(Some "welcome"!!!)

> >Was this decision made "for good reason" ???
>
> They thought so at the time - both the FCC and the ARRL. Are
> you saying the FCC made a bad decision back then?

Yes, I think so ... if you read the entire article, you'll find out
that the FCC Chief Engineer at the time sounded a LOT like
Larry or Dick "If you can't do 25-30 wpm, you're not much of
an operator." In fact, he states the view in his reply that "An
operator whose top speed is not more than 12 words per
minute would be classed as a poor operator."
(Sounds a LOT like Larry or Dick ...)

> Them's the historic facts, Carl.

Sorry ... but the letter from the ARRL to the FCC and the
FCC's response don't seem to support your assertions ...

I respectfully decline to concede, absent some more
compelling evidence that your assertions are not little
more than conjecture.

I don't think I could read Morse telegraph code which is what tapping
would have to be. I wonder how many hams can read Morse telegraph clicks?

That should come as a surprise, or what? If you bother to check
back you'll find that I've said for years that our spectrum WILL be
removed from our allocations as it is needed for commercial enterprises.
So who better to lead that assault than a licensed ham who is too dense
to understand what he is being used to do? One that has no use for hams
other than those who feels exactly as he does. One who insists his
experience at cordless telephone design trumps everthing else in
AMATEUR RADIO.

The scenario couldn't have come out better for the benefit of commercial
frequency grabbers if Reed Hundt had written it himself. In fact, it shouldn't

be too much of a surprise to find that he did.

Hey, once the ARS is converted to a majority of CBers and cordless fone
jocks, the rest is a piece of cake.

the
> (alleged) "problem" which the Petition "seeks to remedy,"..."

No, that is the "lead" to the posting of the actual text of
Mr. Tynan's comments ... they WERE"scathing," he DID
"systematically attack" all of the opposing comments, and
he DID "question both the motives and the integrity of the
organizations in question."

THAT was a PURELY FACTUAL "lead" or "pointer" to
the link to the actual, unabridged text of Mr. Tynan's Reply
Comments. I wrote it and I stand by it.

The "Articles" page on NCI's website always has some sort
of "lead," pointing to a link to the full text, unless the bit of news

is so brief (1 or 2 short paragraphs) that is makes sense to just
place it on the main "Articles" page ...

Obviously, you seem to have a problem with factual reporting
of news ... at least when the news (or the reporter) are not to
your liking in terms of fitting your agenda.

Hello Pete,
Yes I sure do! Morse Tutor Gold will do that and a lot more. While learning CW myself I tried several freeware - and - commercial CW software tutor programs. Morse Tutor Gold is the Cadillac of all of them IMHO. Here is the link to their homepage and from there you can order.

GGTE Amateur Radio Software
http://www.ggte.com/

It is also available through HRO outlets and the ARRL organization....good luck. Morse Tutor Gold took me well past 20wpm with great ease and flexibility in lesson structure....

>The ARRL is amking a comment on a petition for rulemaking, not a reply
>comment on somebody else's comment on a proposed rulemaking.

It would be very unlikely that ARRL would file Comments without also filing Reply Comments. The very purpose of Reply Comments is to reply to the comments filed by others. ARRL routinely does so, and in doing so, most often discusses the Comments filed by others and why ARRL believes them to be wrong.

When the restructuring proposal was on the plate, ARRL filed extensive Reply Comments. Included in those Reply Comments was considerable verbiage about both NCI's and Carl Stevenson's Comments.

http://www.arrl.org/news/stories/1999/01/21/3/

Note that although ARRL disagreed with Carl, there are no major hard feelings involved on either side. The system is a matter of due process and the system is more important than the outcome in any individual case.

>

Well, there he goes again, making a dash for the safety of Websters. If it isn't Webster's it's either the IEEE dictionary or the refuge of Pure (not applied) logic.

I can't seem to get it through to him. When a communicator is trying to get a message passed, and SSB tanks but CW is still going strong he couldn't care less what Webster has to say about obscure word definitions. Especailly when they are chosen by a Trollmeister.

Actually, it does. Before the FCC enacted their own preemption for television and satellite, in 1995 California enacted its own "pizza dish" satellite antenna law (civil code 1356 seems to ring a bell as the cite, but I could be wrong), which specifically indicated that it overrode any CC&R's which would otherwise be in conflict.

>stipulation.

And the government can always [indirectly] change what elements are necessary for a valid contract:

- The parties must have the authority to enter into it, and
- The contract must be legally enforcible.

With a law that specifically sets aside CC&R contracts with regard to certain actions, that cancels the enforcibility requirement; i.e. the HOA for the area cannot sue the individual homeowner when he followed a state law that OVERRODE the CC&R's agreement. The individual has a valid defense that cannot be defeated. The HOA must first challenge the law and win.

Still no difference. It is still a civil matter. The fact that in one case,
the government is a party and in the other, it is not, does not elevate the one
involving the government to be some other sort of matter, such as criminal, nor
does it invoke Constitutional protections.

> Right... Don't join. When they come to take away your frequencies

This month's Scientific American had an article on using power lines for LAN connections. When I saw that they had broken the 4-20MHz spectrum up into 84 wideband channels it really raised my eyebrows. Sounded like a great opportunity to QRM almost all the HF bands. And are we really going to get on our neighbors case because their computer is keeping us off 40 though 15?

But then I read a little further. They blocked out the ham bands from their frequency plan. Seems they knew the League would be all over them like a cheap suit. Looks like they learned a lesson from the RFID crowd. Not clear who is going to win that one yet, but the League has kept them from wrecking 440 for several years now.

Got news for you, Dick. After a plethora of dirty words, nobody listens to you anymore, even if you are right. Try out your approach on a street corner. If you called me a horse's ass on 40m CW, do you think the FCC would mind?

Josh,

If you consider that a "slam" then I'd avoid reading any newspapers
on any day of the week.

As to including more than the actual text, so be it.
That was incomplete research on my part based on your prior
comments. Never-the-less...shame on me. Regardless...
if you still think there's something unethical, unfair, or whatever
as to NCI stating what we did...then get out of the kitchen
if you can't stand the heat.

Cheers,
Bill K2UNK

What a peculiar thing to write. I'm not a former president or former elected official, have not been involved in a sexual scandal in my office or otherwise and there were no women involved in the scenario at all. Other than those few minor details, you probably have it 100% correct, Tugboat.

Well, what you know is apparently deficient. It might work your way over in NJ, but we're discussing California law and CC&R's (clear by the title of this thread). Involuntary conversions do not carry the CC&R's with them here. If they did, people could easily be denied loans on the grounds that banks don't like the CC&R's (and for no other reason), on the risk that the bank could end up with the property upon foreclosure. I certainly don't practice banking law, but such an action may even violate federal "fair credit" laws; I'd have to check.

The argument is not over whether CW sometimes gets through after SSB fails, Dick.
The argument is over the definition of, "fleeting", an on that count your ignorance
outshines a supernova. I was on 17m awhile ago and CW faded until the signal
was unintelligible. Of course, with your 150dB ears, that never happens to you.

Yes, but you would be jailed for the CONTEMPT issue, not for the detachment issue. You're associating the action with the wrong cause.

As a charge: No. Why? There's no trial.
A finding is a necessary step before the imprisonment, and technically, any event where the result includes incarceration is a criminal matter by definition.

Huhhhhhh? Dick, you've completely lost it. What on earth could dropping the
Morse code requirement have to do with losing ham frequencies???? The frequencies
that hams are most likely to lose are the ones where nocode techs are allowed to
reside.

That's a rather juvenile conclusion to draw based on your dislike for
CW. You don't know morse well; don't use morse at all and thus know
little if anything about its use.

> I draw that conclusion based on stories I've read and hear
> about.

Right. You don't know anything about it and must rely on stories.

> My offer was to see if I am wrong; and the only way to do that is to

> We provide communication service to our public service and regulatory
> agencies during an emergency or disaster. Those entities do not use CW
> themselves. Why would we?

Because we use it and have it as one more tool available to us. Because
at HF the mode is second in popularity of use only to SSB.
>
> There is no "what if" Dave, there was an invitation you apparently cannot
> meet. I see I made my point. Glad you were able to understand.

No, you've failed to make your point. You seem to believe that if CW is
not used in one disaster or emergency situation, it will never be used.

Roll on the floor laughing some more of your ample bottom off over your
own simple notions.

Source record: 35470

Depends on the policy of the testing group.

In my group, we have sufficient multiple versions of each test that we allow up to three attempts in any one session for any one element, time permitting (since we have to vacate the premises by a certain time). However, each retest requires the payment of another test fee. If a candidate only missed a test by 1-3 questions, we encourage at least one retest. At least half of them pass on the retest (so it seems - I'd have to go through our records to verify this).

Other groups sometimes don't have sufficient resources to give retests at the same session.

No one needs to worm their way into making "you" the goat Dick,
your words...once again...as stated above do it all too well
without anyone helping.

> Happens here all the time. Meanwhile they're too lazy to just meet the
> qualifications

Another false claim. I've been a coded ham since before the 5wpm
min/max change. So has Cecil and many others.

> and go all the way even to persuading the bureaucrat in the FCC who runs
ham radio
> rule making into doing exactly what they want.

Let's see...there's one school of believers that say the FCC made
up their mind years ago and NCI had ZERO impact on the
changes...then you now give us (NCI) an outstanding
comment of support as to our (NCI) ability to persuade the
powers that be in the FCC.

>Hey, he isn't about to get them
> down on him, just to save basic radio communications.

What an unsubstantiated pile of garbage. Not a shred
of evidence or documentation to back up your half
backed assertion. No cigar...and I'd avoid public debate
if I were Dick.

[x] Crosspost and follow up to news.admin.net-abuse.usenet

Your provider has been notified about your constant abuse of usenet.
Constantly crossposting as default behaviour of your news-client is
unacceptable behaviour by usenet standards. This is clearly stated in your
provider's terms of use, which can be read here:

http://www.bnb-lp.com/terms_of_service.html

Explicitly the following two paragraphs should make things rather clear to
you:

"Sending a message to many different off-topic newsgroups (Cross Posting),
is particularly unacceptable and will be treated as inappropriate posting
which may result in account suspension or cancellation.. You agree to abide
by BnB's policies concerning use of BnB's Internet Services. BnB reserves
the right to suspend access to service for your account(s) upon an
indication of disallowed use."

and

"You agree to pay a fine of $500 for flagrant disregard of allowable use
policies including sending unsolicited commercial email, spam, or via
posting commercial messages to Usenet discussion groups whose charter does
not explicitly allow advertisements. You also agree to reimburse BnB for any
costs involved in dealing with such incidents. BnB staff time will be billed
at $ 50.00 per hour. It is at BnB's sole discretion what constitutes such
flagrant disregard of allowable use."

A formal complaint has already been filed with abuse@bnb-lp.com.

On that I agree. The difference that one comes up against is
that in CC&Rs, the government does NOT make the
charge (filing), nor does it make any arguments for or
against. In an ordinance violation, the governemnt,
as plaintiff, does the filing (notice of violation) and can muster
the resources of the government in "pressing the case against
the violator.

Yes, Dick, the elimination of Morse test requirements from
the ITU Radio Regulations is an international conspiracy
designed to take away our spectrum (not!)... the sad part
is that you can't comprehend how TOTALLY RIDICULOUS
you sound when you infer that.

What WILL cost us spectrum, in the long run, if it's not
changed, is STAGNATION caused by the "It must always
and forevermore be just like it's always been." attitude that
folks like you exude because you believe that passing your
amateur test was such a great accomplishment and everyone
else is "dumbed down."

> So who better to lead that assault than a licensed ham who
> is too dense to understand what he is being used to do?

Gratuitous insult noted ... but I'm not leading an assault on
our spectrum ... I'm trying to defend it by promoting modernization,
despite the best efforts of old foggies like you to keep ham radio
in the past and, thereby, make it less attractive to newcomers in
today's technically advanced world.

> One that has no use for hams other than those who feels
> exactly as he does.

I don't feel that way at all ... unlike you, I respect the right of
choice of modes of other hams and don't try to force my
mode of choice down everyone else's throats by unnecessary
regulatory requirements.

Yes, I have expressed disdain for certain attitudes ... like the
"stomp 'em into the dust with rude, crude, brute force" attitude
I see/hear in so many contests. But, it's the ATTITUDES and
BEHAVIORS that I find objectionable, not that someone finds
the activity fun or interesting.

> One who insists his experience at cordless telephone design
> trumps everthing else in AMATEUR RADIO.

Dick ... I've simply stated that there is inexpensive consumer
electronics technology out there that is ages more advanced
than most of what is used in ham radio. Yes, I'm proud to be
able to be creative enough to invent such stuff ... and I'm proud
of my patents. I only wish that more hams could grasp the
utility and benefits of more advanced technology and embrace
it, rather than shunning it and insisting that it's "irrelevant to
ham radio" like you do all the time.

> Hey, once the ARS is converted to a majority of CBers and
> cordless fone jocks, the rest is a piece of cake.

Wow! You've actually managed to attempt two insults in
one sentence. Too bad that neither of them applies to
me. I'm not a CBer and I'm not a "cordless fone jock" ...
I'm an RF designer and systems engineer who happens
to work in standards and regulatory matters now.

>

Well, I didn't mean to imply that, Bill. What I meant by my comment was simply that Joshua seems to think NCI did and I thought he was approaching the ARRL angle from that perspective.

> >
> > I don't think they would do that--they'd be stupid if they

>
> What if they did? What is stupid about attacking the
> comments of an opposition party?
>

It would seem to me that if the ARRL openly "attacked" someone for making comments to the FCC, that it would neither be good business, nor would it be in any way productive. However, I've just never seen them "name names" in their public comments (the little I've read of the ARRL Letter, for example). I may very well be mistaken. I don't look to the ARRL, or NCI for that matter, as the type of entity that would emulate a reporting agency, where all's fair in love and war.

> >

It would be interesting to note. *Did* NCI criticize (that's as far as I would go with it) someone? I don't think it's wrong at all for the ARRL or NCI to offer criticism--but not act as we do in this newsgroup. :)

It's certainly worth a lot, Joshua. My comments about CW--especially in emergency and disaster situations--are simply an observation that I believe other modes are most often used. If I am wrong, I offer anyone to submit some kind of evidence.

CW is grand, it's a great tradition for those who enjoy it and I don't think in any way that it should fade away from the bands. I don't support it being tested for a license--and that always stirs contempt. I don't even mind the contempt. But, the greatest defense offered always boils down to emergency communication. That doesn't cut the mustard, as I think it's false.

I also apologize for any aggressiveness I may have used--and I think I did. This medium (text on the internet) is the roughest form of communication we have. None of us are very good at it yet. You remind me if I act like an idiot, and I'll remind you... ;)

>Steve do you suppose that you might find time to grow up soon?

Hi Gerald. You and your other Los Alamos buddies out of secrets to sell to the Red Chinese, or just taking a break due to the current spate of patriotism?

>Why don't you take this to email and spare the rest of us the
>embarrassment of being the same species as you.

I could say the same of you, Gerry. You felt compelled to get your "dings" in in a public forum.

By the way...I don't remember seein a whole lot of posts of ANY meaningful content in any significant number of threads.

You just like to pop in and be rude? If so, you're doing a fine job.

By the way, just how many "kids" find thier way to Amateur Radio via RRAP?

I tried several websearches for "Amateur" radio, "Ham" radio, "SWL", "radio hobby", "CB" and several other permeations, and NONE of them made ANY link to this forum.

Of the three Amateur Radio clubs I belong to, NO ONE knows of this forum. Certainly none of the Amateurs under 18 know about it.

If you LIKE being made the target of such bile and filth the likes of which His Lyingness has spewed, be my guest.

Otherwise, AMF

Steve

True, but all I had to demonstrate is one example that countered you BLANKET statement in order to prove it false. You said that no law exists allowing antennas in deed-restricted neighborhoods. I showed that there is a law that allows a specific type antenna in such a neighborhood. Although it doesn't allow ANY antenna, it still voids your statement.

I agree that no statute exists. Federal regulations are not statutes, but the government's explanation and extension of them.

However, a state cannot take away what the federal government specifically grants (10th amendment corrolary), and don't amateur licenses have a section labelled "station privileges?" (Hint, hint.....) :-)

[Granted, there is no current definition of an amateur radio station being a FIXED location, but if there were, it's possible that a very subtile change in the regulations could wipe out CC&R's. In any event, CC&R's usually do not prevent in amy way mobile or portable operation, so put your 1KW HF rig/amp in the car and operate it from there while at home. It's even got a built-in chair!]

You're correct Charles... if you need domain forwarding, our fee is more than you might pay at others... but then you don't get our outstanding, personalized support. And, you forgot to mention that our registration fee of $11.95 is $4.05 cheaper than the other company... if you don't need forwarding, why pay more?

5840. Re: Making mention of others' comments ... routine practice

Newsgroup: rec.radio.amateur.policy
Date: 2002-02-25 01:56:32 UTC
From: Joshua Houk <jlhouk@worldnet.att.net>
Message-ID: <MPG.16e338f18fa6543b98969b@netnews.worldnet.att.net>
Source record: 35499

In article <3c798146_2@newsa.ev1.net>, seventythree@eightyeight.net says...

> However, I've just never seen them "name names" in
> their public comments (the little I've read of the ARRL Letter, for
> example.

Unfortunately for me, they have. Just checked it out.

Cripes!

There seems to be a small difference in that from what I've seen it doesn't look like the ARRL ever (hold on!) published a news release that someone had made a Reply Comment without the ARRL noting that it made a Reply Comment in reply. From the way the NCI page is set up, it looks like they possibly did, but either later or concurrently posted a news item about their Reply Comment to the Reply Comment.

In other words, I'm making a lot of brouhaha over nothing.

Yeah, I didn't like the tone of the news release, but I think what I initially took as browbeating and the targeting of someone is a whole lot more innocuous than that.

>
>"The growth of amateur radio and the total number of amateurs will
>doubtless be controlled in the future. The present condition of the
>amateur bands, while not intolerable, approaches saturation. ...
>[The number of amateurs at the time was 46,000]

Which was approaching saturation given the typical techniques of the day,
and the band allocations of that time. Seems incredible today, but that
was the case back then.

> DeSoto goes on:
>
>"Obviously no competent person can be denied the right to become
>an amateur.

Which means the total number cannot be controlled, and this was realized by
DeSoto,
ARRL leadership and the FCC back then.

>The only justifiable restrictive procedure is to raise the
>standards of competency. This has already been done to the point
>where it is many times more difficult to secure an amateur operator's

Yep, it's pretty clear:

"Observations show that too many licensed amateurs do not possess
the qualifications presupposed by the regulations."
>
>"A general raising of the standards could help to confine the
>obviously limited facilities of amateur radio to those who have
>at least nominal aptitude for the same. It seems indicated that
>this situation could be best treated by an increase in the code
>speed. Consequently the League now requests the Commission
>to increase the code speed required in the amateur examination

>from ten words per minute to twelve and one-half words per minute."
>*********
>
>It's clear from the above that the ARRL, at the time, wanted to
>"control the population" and that the bands, with ~46k amateurs
>were "approaching saturation."

The problem was that getting a license was so easy that huge
numbers of newcomers were raising havoc - on the bands
and with other services.
>
>The referenced letter also states that "the chief opportunity for
>a better selective process resides with the code examination."
>
>The final paragraph above ALSO indicates QUITE CLEARLY
>that the increase in code speed which the ARRL requested was
>TO CONTROL THE NUMBER OF AMATEURS.

And the earlier parts clearly show that no qualified person could be
denied a license, and that too many of the hams of the day
lacked the necessary qualifications.
>
>> The concerns were:
>>
>> 1) the POPULAR bands of the day were overcrowded
>
>I find that hard to swallow with well more than an order of
>magnitude fewer hams than today ...

Yet it is true. In 1936, US hams had 160, 80, 40, 20, 10 meters
on HF/MF, plus 5, 2-1/2 and 1-1/4 meters. (In fact, hams could
use almost all of the "ultrahighs" back then).

But most hams clustered on 40, 80 and 160. Many hams used
only one band because of equipment and antenna limitations.

Although a few hams were using SSB, (W6DEI and others, as
early as 1931), almost all amateurs on voice used AM.

Using typical amateur equipment and methods of the mid 1930s,
how many QSOs do you think those bands could support?

>also, even if it
>were true, which I don't buy, a better solution than
>"controlling the population" would have been to encourage
>folks to spread out a bit by using the other bands, which
>you insinuate were not "so crowded."

The ARRL DID encourage the use of 10 meters, 5 meters
and up. As early as 1928 there were lots of articles on
getting on the "ultrahighs" - particularly after mobile
operation was authorized there. But the results obtained were
a far cry from what could be done with the same expenditure and

complexity of equipment on the HF bands.

In those days all hams had access to all amateur frequencies, too.
Getting on 75 or 20 meter voice required a Class A license, which
took another written exam but required the same code as Class B
or C.
>
>And what about the "superior spectral efficency of CW,"
>which was the predominant mode at the time?

Exploiting that superiority requires stable transmitters and stable,
selective receivers. While crystal control and single-signal
receivers did exist, they were beyond the reach of most hams.
End result was that most hams of the day used receivers that
were horribly unselective. Typically, one heard a 10 kHz chunk of the
band, at minimum.

Most operation in those days was what we would call "split" today -
two stations in a QSO would transmit on different frequencies. This
doubled the spectrum usage.

Of course superior techniques greatly increased the "carrying
capacity" of the bands. But such techniques were only beginning
to show up in the shacks of Depression-era hams. After WW2,
it was an entirely different story.
>
>> 2) many newcomers were getting on the air with insufficient
>> skill AND TECHNICAL KNOWLEDGE for the conditions of
>> the day
>
>Sorry, but there is no indication in the letter requesting that
>the code speed be increased to control the population that
>the ARRL sought "better written tests" ... only that they asked
>that the code speed be increased to keep people out.
>(There was a vague mention of "a slight stiffening of
>the basic examination," but in the end, the ARRL doesn't
>specifically request a tougher written test, nor does the FCC
>appear to respond with such action ... only an increase in
>code speed ... see the entire article ...)

The ARRL wasn't going to remind the FCC of the problems of
technical violations by amateurs. Read the publications of the
day, and talk to the hams who were there. Bum notes, harmonics,
drift, chirps, clicks, overmodulation, and instability were big
problems that gave the ARS a "black eye".
>
>> 3) the explosive growth (the number of US hams TRIPLED
>> from 1929's ~16,000 in less than 5 years)
>
>Still, the indications are that there were ~ 46k hams .. FAR
>fewer than the 600k+ of today ...

Of those 600K hams of today, how many are active on HF? How
many hours/day do they operate? How many bands do they have
to choose from?

> and at that time, I would
>suspect that far more hams were using CW ...

True, but many were also using 'phone. Some of the signals
were gawdawful, produced by things like loop modulated oscillators
that FM'ed as much as they AM'd.

> which is,
>according to its proponents, "extremely spectrally efficient,"

It is - IF it's used properly.

>so, even given that receiver selectivity was not as good in
>those days as today, I find the argument unconvincing.
>(I don't believe that receivers were more than 10x worse
>than today, and there must have been FAR fewer hams,
>as a percentage using any form of voice.)

A typical CW receiver today, suitable for casual use, has a
passband of perhaps 500 Hz. Serious CW ops usually have provision
for at least 250 Hz passband filtering. Filter shape factors of 2:1 are
typical. Blocking dynamic range of more than 130 dB is common.

Back in the 1930s, a typical amateur receiver had a passband of 10
kHz - 20 to 40 times that of a modern receiver. Shape factors of
10:1 were common, and dynamic range was all over the place. Some
receivers were pretty good while others were awful in this regard.
There was also the split-frequency situation. End result was that
the spectral efficiency of CW was not realized in most situations,
and the bands were "very crowded" if one used the equipment
commonly used at the time.

Proof of this is simple: Advanced hams were using SSB and
single-signal crystal filter receivers by the mid 1930s. This progress
was driven by the crowding of the bands.

>> 4) high turnover (as many as 40% of hams not renewing, at
>> a time when the license term was 3 years
>
>Neither is this mentioned in the record to which I referred ...
>and if so many hams were dropping out, why the concern
>that the bands would become "saturated?"

The turnover was indeed a reality. Part of the problem was frustration,
but the Depression was the major force. The main point is that the
ARS of the thirties was taking in huge numbers of newcomers who
weren't renewing. They were being rapidly replaced by even more
newcomers.
>
>> 5) increasing numbers of TECHNICAL violations (out of

>> band, harmonics, hum, chirps, etc.) wreaking havoc on
>> other services and threatening the reputation of the ARS.
>
>I see no direct mention of this in the ARRL's letter to the FCC,
>either ... if it was, indeed, such big problem, why didn't the
>ARRL mention it?

The FCC knew all about it. It would not be smart to point out
these things to the FCC in writing.

>Why did they *discount* improvements
>in the written tests and focus ONLY on increasing code speed?
>(And why only in reference to "controlling the population?")
>
Controlling - not limiting. BIG difference.

>> Many of these violations were the result of inexperience
>> and a "don't care" attitude.
>
>Lacking supporting evidence (which I'm open to consider),
>I can only suspect that this assertion is your opinion or
>conjecture.

It's based on reading the literature of the day, and interviews with
hams who were licensed at the time.
>
>> The solution proposed by the ARRL leadership and accepted
>> by the FCC was a slight rise in the code test speed AND new
>> written tests. Funny how the written test changes are forgotten.
>
>"The written test changes" were not "forgotten" ... they were not
>mentioned in the ARRL's request.

They were mentioned elsewhere. Are they mentioned on NCI's
website?

>In fact, the written tests were
>specifically discounted in the letter as a solution to the "problem,"
>and instead ONLY an increase in code speed was requested.

Because the written tests had already been upgraded.

>(And again, only in the context of "controlling the population.")
>
>> >(at the time, the
>> >total number of hams was a SMALL fraction of those now licensed,
>> >so the argument was, on its face, absurd ...)
>>
>> Incorrect again. Carl, do you know what the amateur bands were in
>>1936? Do you know how they were used? Do you know what the
>> typical amateur station equipment was like in those days? Or how
>>many hours/week a typical amateur was on the air?
>

>I wasn't born at the time ... were you? (If you are that much older
>than me, were you licensed and on the air at the time?)

I didn't come along until years later - but so what? Must one have
been alive during the Civil War to be knowledgeable about it, and
the factors that influenced the people of the time?

> However,
>I recognized above that while receivers weren't as good as they
>are today, there were also more than an order of magnitude less
>hams than today and voice operation was not the norm, with most
>operators using CW.

And they had fewer bands and much less stability and selectivity. End
result was apparent overcrowding.
>
>> The argument was NOT "absurd" once all the FACTS are known.
>
>I still think the argument was absurd.

Then give some numbers. Like how many simultaneous QSOs could
be had on 40 meters at night using 1936 equipment and methods.

> It's not the first time you
>and I have disagreed ...
>
HAW! That's a GOOD one!! ;-)

>> >The FCC felt that 12.5 wpm was an "awkward" speed to test
>> >for, so they rounded it up to 13 wpm ...
>>
>> Yup. And it stayed there for just 15 years - 4 of which were WW2.
>> Then 5 wpm was added.
>
>Yes, for a novice license, good for 1 year, non-renewable.
>"Learn to beep fast fast or get the hell out of ham radio."
>(Some "welcome"!!!)

The same 1951 restructuring that gave us the Novice also gave us the
Technician - which had a 5 wpm code test!

Have you forgotten about the Tech license?

Its purpose, btw, was to encourage the use of the "ultrahighs". It was
suggested
in various fashions in the late '30s, and formally proposed as a "Class D"
license after WW2.

Your statement:

"Learn to beep fast fast or get the hell out of ham radio." (Some "welcome"!!!)

indicates a hatred of the code itself and a big gap in your knowledge of the
history of US amateur radio licensing. Remember, we're talking about

history here, not the way things are today.
>
>> >Was this decision made "for good reason" ???
>>
>> They thought so at the time - both the FCC and the ARRL. Are
>> you saying the FCC made a bad decision back then?
>
>Yes, I think so ... if you read the entire article, you'll find out
>that the FCC Chief Engineer at the time sounded a LOT like
>Larry or Dick "If you can't do 25-30 wpm, you're not much of
>an operator."

For 1936, was he not correct? At that time, Morse/CW was THE
major mode of both the military and commercial services. Yes, there
was some voice and some RTTY, but only a small amount compared
to Morse/CW.

>In fact, he states the view in his reply that "An
>operator whose top speed is not more than 12 words per
>minute would be classed as a poor operator."
>(Sounds a LOT like Larry or Dick ...)

Why is that not correct - for 1936?

One of the justifications for the very existence of the ARS back in those days
was as a training ground for radio operators, and a ready reserve for military
and commercial needs. Of course the military and commercial services don't
need many Morse/CW operators today, but back in 1936 it was a VERY
different story! Hams who could not begin to approach commercial or
military standards of skill weakened this justification.

This idea is explained in DeSoto's book. Have you read the whole thing?

Recall that early in WW1, there was a severe shortage of radio operators. About
4000 US hams (a very large percentage of the US amateur radio population of
1917) served Uncle Sam in WW1. With the rise of communism and fascism in
Europe, the possibility of another war could not be ignored. Having a large
contingent of skilled and technically knowledgeable hams helped justify the
continued existence of the ARS.
>
>> Them's the historic facts, Carl.
>
>Sorry ... but the letter from the ARRL to the FCC and the
>FCC's response don't seem to support your assertions ...

If you look at them without an understanding of the technology, methods
and concerns of the times, I would tend to agree with you.
>
>I respectfully decline to concede, absent some more
>compelling evidence that your assertions are not little
>more than conjecture.

See above. I would respectfully suggest that your conclusions are conjecture based mostly on lack of historical background of the time.

Petty...regardless of what the feds call them, none exist that gives hams
the chance/opportunity to override CC&Rs for ham antennas.

> However, a state cannot take away what the federal government specifically

Hint, hint...not laughing. So why hasn't that defense found favor
in ANY state court. Phil K has pointed out that the argument you
suggest (vis-a-vis station privileges from the feds) hasn't found
favor anywhere.

> [Granted, there is no current definition of an amateur radio station being

Or run a coax from the car to your ham shack :-) and use the
mobile antenna.

If for nothing else Bill, it might keep some of the Hams from Grousing.
I think a lot of hams complain about how the tests are dumbed down
without real knowledge of what the tests exactly are at the moment.

It's actually quite clever. Have a person study a thousand or so
questions to prepare for a 50 question selection. A person actually
learns quite a bit.

The way I see it, it isn't a whole lot different than a reference book
that has all the answers "in there somewhere".

I don't open TITS' posts (who wants to waste the time to read reams of
airhead twaddle?) but she just as well know the answer to her question. It was
the Koran.

Of course there's lots of later writings that analyze Islam, particularly
large radical
sects who have vowed harm to the West, but hey, don't upset her little world
with
anything unpleasant. She's all fun.

> I have an antenna for TV reception only with the TV preemption and I have
>it hooked up to my TV, stereo & Shortwave Radio , what are you going to do
>about it as a association lawyer?

If the Association is out to get you, an Association lawyer will
send you what amounts to a "cease and desist" order to remove that
antenna because it does not comply wuth the terms of the CC&Rs and
thr Association's Rules.

Now the ball is in your court to tell the Association that their
order is pre-empted. Unless you attempt to bluff them by lying
about what the FCC Rules pre-empt (which their lawyer can check very
easily) you can try to get an FCC Declaratory Ruling of pre-emotion.

Do you think that the FCC will issue one for your mixed-use antenna
or are you going to lie to the FCC about your stated use of the
antenna?

If the Association knows about, or legally should know about, your
antenna and does not send you a "cease and desist" order, you are
home free until some aggrieved member/owner sues both you and the
Association for enforcement of the CC&Rs and the Association rules,
and the circus starts all over again.

Until Keith shoots his mouth off to the Association about what he is doing like he does here and someone on the Board decides to look into how they can get him to stop - I served on a Board that had such a memeber once - and finds out just what the pre-emption will and will not cover.

Smart people never cross an Association board when the law AND the facts are in the Board's favor.

>that needed to be paid for title to pas to the "new
>owner" who inherited the property.

In California at the present time, property passsed to a new owner by any means includes all easements. CC&Rs, and applicable Association membership subject to rules.

At one time, lien sales/auctions passed property "free and clear" of all "encumbrances" but over time, the law changed to apply only to liens and other financial "encumbrances", not to the above. That's why bidders/devisees have to do due diligence and the lienholder will enter a bid equal to its interest (remaining trust-deed balance, for instance) in the property to protect itself.

I have enough problems with California's "pretzel" of laws - I am not qualified to speak to other state's real estate law.

Rarely happens that way (I do know several judges who wish that it
did more often, and that stupidity and knotheadedness were
criminal offenses).

What does happen in the extreme (they reslly want to "get" you) or
when safety is at issue is that the Association applies to the court
for a Writ of Enforcement to enable it to hire a contractor to enter
your property (which you agreed to in the CC&Rs) and abate the
non-compliance/ They may also ask (and pay for) for law-enforcement
standby protection for the contractor. Start 'rasslin' with the
sheriff and THEN you go to jail for assault.

That's the extreme, and would not be invoked in most instances (but
COULD BE).

What they most probably would do is to assess a monetary penalty
for non-compliance (again, as you agreed to in the CC&Rs), something
like $500 or $1000 per day for each day that the "violation" exists.
This penalty, if unpaid within a specific time, gets filed as a lien
against your property. When the lien gets large enough, the
Association forecloses, and your property is sold at auction to
satisfy the lien. Most probably the holder of your first deed of
trust (there are no mortgages in California) will bid in for its
outstanding balance and get the property once it's up for auction.

All over a stupid TV antenna.

>have been jailed for contempt yet they don't lose their
>license to practice.

The following is California practice......

There are two kinds of contempt - civil and criminal. Both are triggered by egregious challenges to the judge's authority.

Civil comtempt, usually imposed for past misconduct, such as mouthing off at the judge, has only monetary penalties, but criminal contempt, usually imposed for continuing to disobey a court order after one or more warnings, can result in monetary penalties and/or imprisonment. The latter is imposed until such time as the defendant decides to comply with the court order. The catch phrase is "the keys to the cell are in your hands". Jail terms over 6 months require a jury trial, in which the only issues are whether the order was lawfully issued and if the defendant is able to comply with the order or not. Jailed defendants share the same luxurious quarters as the failure-to-pay-child-sypport folks.

(Too many) lawyers get slammed for comtempt, but unless the situation involves a violation of the Lawyer's Rules of Practice (the ABA Canons are not part of California law) or egregious character qualification issues, no action is taken against their license to practice.

Civil Code Sec. 1376. Close enough.

It only applied to satellite dishes in Planned Unit Developments.
(condo apartments, townhouses, and individual residences that
constituted a PUD tract) and did not cover TV antennas or any
antennas in any other type of development or neighborhood.

At the time it was a great advance.

Hint, hint....read _Howard v City of Burlingame_ where the Ninth Circuit basically said that holding an amateur radio license does not carry any First ASmendment "free speech" protection as against any governmental (Federal, state, or local) action, that holding such a license does not give the licensee any right to erect any antenna of his choice as against the reasonable regulation of the local government, amd that holding such a license does not invoke any superior rights as against legitimate local governmnetal actions.

This was never appealed (IIRC "Uncle Vern" died shortly after the ruling) nor overruled in any other Circuit or by the SCOTUS, and is cited quite often in Federal and FCC proceedings so it remains prevailing law.

Of course if "Uncle Vern" wouldn't have put up that 65 foot tower after the City denied him a permit for a 51 foot tower, this would never have happened, and on my home turf.....

Like most things it comes to the 3 E's, Engineering, Education, and
Enforcement, just like traffic safety. How good the locals or the FCC are
at what they do I will leave to you.

>I think a lot of hams complain about how the tests are dumbed down
>without real knowledge of what the tests exactly are at the moment.

They know what the tests are and because they feel they can pass them easily after decades of hamming, they think they are trivial tests compared to the "hard" ones they took before they had decades of experience.

When I studied the 4 page Novice study guide and passed the test at 13, I thought I had done something pretty special. Sure glad we didn't have internet around in those days so some cussing old timer couldn't tell me how lazy I had been.

You *say* that you only insult people while defending yourself. There were a lot of insults in the above post. What did Joshua say to you that you felt you had to defend yourself by cussing about other people?

Is this another one of those "Do as I say, not as I do" sort of things?

You had to "defend yourself" again because Cecil commented that he believes
that humans can tell the difference between human and non-human tapping?

This "defend yourself" justification for your public profanity is wearing
pretty thin if you consider what Cecil said "an attack." Do you really need
that much "coddling?"

Not me!

All anyone has to do is surf over to one of the sites that lets you take
a practice test online. The ones I use grade the test for you, so it's
easy to see how you're doing.

I've never had a bit of a problem with any of the current tests. Retest? HA!
I say, BRING 'EM ON!!!!! I'll take 'em and pass 'em easily, with NO prep
at all.

Because it works!

Those agencies do not provide themselves with adequate communications
facilities for all imaginable situations, either. If they did, there would be
no
need for amateurs to be involved at all. (They're getting better in this
regard,
though). Why should we copy what they do?

It's not a primary mode, no. But it IS used, like it or not.

Many disasters don't involve HF, either.

> In fact, other than simple traffic handling routines,
>I know of no instance where CW has been used in an emergency.

"Simple traffic handling routines"?
>
>Take the WTC disaster. I've already offered that someone provide the
>message that was relayed out of that disaster scene--this country's worst.

whoa! This country's worst disaster? By what measure?

I'm NOT minimizing the tragedy or impact of 9/11, or the losses suffered in
NYC, Washington or Pennsylvania on that day. But on what grounds do you
call the WTC disaster the WORST in USA history?

>I don't think you'll find one.

I don't have access to any of those messages. But I can pretty much guarantee
that any which were relayed on NTS went at least part of the way on CW.

Did any emergency messages go by HF? If you can't provide one, will you say
that HF is not preferred in emergencies?

> I am not saying anything against the mode,
>its users, etc.

Maybe not in this post.

>I am simply stating that it is my opinion that CW is not a
>preferred mode in an emergency.

Maybe not in the one emergency you mention. In others, the story is different.
Like the ice storms in New York in 1997, or the hurricane stuff KT4ST is

involved in.

HAW!!! Also the firm of Dewey, Cheetham and Howe.

btw, the new sequel "Return to Neverland" is actually quite good.

The receive-only scenario does indeed have some interesting possibilities.
For example, suppose Our Hero puts up a "TV" antenna in apparent
violation of restrictions. HOA or whatever the Gladys Kravitz folks call
themselves
try to make him take it down, but he cites FCC preemption. HOA folks are
NOT happy, but can't do anything. They look up the rules, though...

Then Our Hero mouths off about using it for FM, SW, or whatever else -
reception only. HOA folks jump on the violation and make Our Hero take
down the TV antenna. AND they go after him for costs.

Now what does this have to do with ham radio? It weakens our collective
position.
The really insidious thing about all this anti-antenna stuff is that, over
time, people
start to think that houses with no antennas are the norm, and that antennas of
any kind are "eyesores" and unnecessary. The person who wants to put up an

antenna - any antenna, for any purpose - is more and more classified as a weirdo who is "hurting property values" and "doesn't support community aesthetics" and such nonsense.

Around here there are neighborhoods where almost every house has an antenna of some kind. Usually they are old TV antennas that have been unused for years (you can see the ragged bit of Twin-Lead waving in the wind). A few of them are still in use, there are a few TVRO pizza dishes, the occasional scanner vertical, and once in a while a ham dipole or some such. The ham antenna is "invisible" to almost everyone because they're used to seeing things on people's
roofs.

But go a fraction of a mile and there are neighborhoods with NO antennas of any kind. Try putting up anyhting there, and it WILL be noticed.

This is another of your "because I don't know anything about it, it
can't have happened" pieces of stupidity. The Soviet Union maintained
quite a large presence in Guinea-Bissau back in the '80s. The Cubans
had an even larger presence. Cuban troops returning from Angola and
troops preparing to go there flew Aeroflot from Bissau. There was a
summit of the five Lusophone African nations while I was in the country.
The very first group of Peace Corps volunteers began their service and
USAID had an active program in the country. Aside from those items
unknown to you, each embassy does ongoing political and economic
reporting and offers consular services to traveling Americans. Most have
activity including USIA programs and libraries. Military assistance and
training is another program the U.S. supports. Because no one sent
Leonardo Heathcliffe Anderson a letter, those things can't have taken
place. I know of your deep love for amateur radio, Len. It might
interest you to know that, for most of my two year tour in
Guinea-Bissau, I was the only ham in the country. I made over 75,000
QSOs on CW, SSB and RTTY on 10 through 6 meters.

It is always nice to receive a history lesson from someone on the
outside whether the subject is my work (which this isn't supposed to be
about) or amateur radio which this doesn't touch on at all though this
is an amateur radio newsgroup. Did you have anything on amateur radio
you'd like to say?

> Communications work is important. In an age where the start of

Communication work doesn't have to be "important" at all. We in
Guinea-Bissau had no responsibilities to warn anyone of a nuclear
holocaust. You must have been thinking of my 2nd AF commo days, Len.
We did do some work with NASA though. Do you know anything about that
or did it not happen because you were unaware?

We already knew of the self-glorification and romanticizing. We've seen
your earlier and frequent descriptions of your Army service.

> However, the word "code" has many meanings and appears
> strange and mysterious to lay people, has many colorings of

> and cannot be revealed on some imagined charge of treason!
> Not quite so in the real communications world.

Much of the material I transmitted and received was and is classified.
Much of the methodology and technology used is classified. I signed
forms indicating that I understood this and that I'd not reveal
classified information under penalty of law. That it bothers some
wizened, embittered geezer in California is pretty insignificant.
It hasn't effected my ham radio activity at all.

(much irrelevant historical blather snipped in the interest of everyone)

More of your "it can't have been since I never heard it"?
State had very few HF (AFRECONE) primary posts in the 80s and early 90s.
Almost all were in Africa in countries where the infrastructure did not
support leased line communications. CW was used for openings, closings,
QSYs and to agree upon crypto sets for use. It happened. It took
place. It was used daily. Don't let it eat you. Get over it. Go on
with your life. Take up a hobby--maybe ham radio. By the way, did you
have something related to ham radio or are you going off on another
non-linear rant?

> I'm sure some snow machine operators are able to avalanche
> the unfamiliar. To those who've done it and know the systems
> they are simply stuffing snow shoes into their big mouths.

What will we do about the stupid? You've been ignorant before. You've
been enlightened yet you continue to rail as if you can't accept
reality. That would have to make you stupid since you are attempting to
argue something you know nothing about with someone who was there, has
done it, has the T-shirt and the souvenirs. You'd have to be a moron to
attempt that. That would be as goofy as a non-ham telling hams how it
should be.

So could any number of other banging noises made by humans. How do
you overcome the differences between the dits and dahs of radio Morse
and the clicks of telegraph Morse? Seems to me, any human banging
would perform the task. Seems to me, International Morse would be
virtually useless in that situation.

Dave, I really didn't need to know a whole lot about DX when I got started.
Like you , I was the DX. And being the DX, I worked a lot of DX. So sorry.

Meanwhile, you couldn't handle the idea of a Tech talking to FR6 daily, like
he was in KP4-land. You just need a few more years on the noisy side of the
pileup, and you'll lose your snobbishness. Well, maybe you won't.

That is all.

Kim, perhaps I should wash Dave's feet or kiss his ring. If I don't adore him I'm crap. Oh well.

DXing wasn't about being known or famous or on 25,000 hamshack walls. It was just pure fun. I guess that make me unknowledgeable about it.

When Jim, KH2D, Joe, N3EMA/KH2, and I would have a local roundtable going, there was always a european or a hundred wanting a signal report. No greenstamps required. Buro was fine. WMPY kept me supplied with beautiful cards. So sorry.

Jim,

The point is that the argument that CW is necessary for emergency
preparedness is totally bogus.

Having been active in emergency communications (ARES/RACES)
for virtually all of the 25 years I've been licensed, including a time
as
a Section Emergency Coordinator, I can assure you that the emergency
management agency "clients" that we serve have NO use for a cadre
of CW operators. They want tactical voice on VHF/UHF (and HF-SSB
when wider area coverage is needed) and data communications ... NOT
the ARRL/NTS style "radiograms" sent by Morse.

As someone stated, the nets that exist to pass such radiograms
exist, not because someone really needs that sort of capability,
but because "it's always been that way" and the nets have come
to create most of the traffic solely for the purpose of justifying
their
own continuation.

> Those agencies do not provide themselves with adequate
communications

Nobody is suggesting that we copy their limitations or shortcomings.

However, there is also no point, and it is actually counter to our image of being a useful resource, to attempt to insist that they use our square pegs (CW) when they have round holes that need filling. The way to show our utility is to give them the round pegs that they want and need.

> 73 de Jim, N2EY

Another point ... in the vast majority of (the few) cases where CW
is used for emergency communications (including H&W traffic),
it is because the operator CHOOSES to use that mode as a
matter of personal preference, NOT because it is NECESSARY
or because it is the ONLY mode available or that would work.

Operator choice based on preference is fine ... however, it is
not legitimate to infer from this that the use of CW is ESSENTIAL
in any way to emergency communications.

I'm sorry Steve, I'm not up on the agreement. So Eqsl changed the rules in the middle of the game. Certainly the Dxers otta have a say.

Seems like a fair deal, though. If you're going direct, postage to many countries is easily a dollar, then you include an addressed envelope and a couple of green stamps. And I'm sure the DXpeditions really don't want a stack of 40,000 cards. Using Eqsl avoids them having to get your card in order to return a card, and is a lot easier on the planet. Now if Eqsl could get away from having to mail out a piece of paper, and just post a record in an electronic database.

More power to them. I used to send out cards to the buro at the end of the week or month, depending on how busy I was. Then I would get these direct cards that I had already sent out a buro card, so...I would send a direct back.

With EQSL, if everyone posted their logs it could be a simple matter to match records and get instant verification. They could track all awards for you and generate an e-mail when you needed to send your$10 or whatever to the ARRL.

Hmm, I really have no interest in bogus managers for bogus stations. But
Eqsl needs to honor their original agreements.

I guess its a valid assumption that we "pay for the contact" but we need to
retrain our senses to comply with the rules.

Sorry for my jerky comment. You've provided a very straight forward explanation of the Eqsl situation. Thank you.

Brian

> record in an electronic database.

I think that's the hardest part of this whole thing. How do handle the
busted calls, reversed letters, miscopied callsigns? In CW (I am not
starting this up here) my call can be misconstrued as KF2D if I send it
quickly. How would an electronic database handle matching that up or an
even better problem..not everyones computer clock is set the same. How
can you confirm a contact by computer, for record keeping, if the times
are different.

Right now you are EQSL for the QSL card and the ARRL LOTW for submitting
(soon hopefully) cards to the various programs. Who knows if the 2 can
come to a mutual agreement. Only time will tell.

>
> With EQSL, if everyone posted their logs it could be a simple matter to

I think eventually it may come to that.

I think that's what created the uproar to begin with, the move from the stated course.

>

>
> I guess its a valid assumption that we "pay for the contact" but we need to
> retrain our senses to comply with the rules.

This is were we disagree as to the nature of the "paying for the contact" The FCC sez you can not charge for making the contact. I and Riley look at this as you (for example sake) are running a DX op in P5..everyone needs this, so you set up a website where those wanting a contact have to deposit $$$ before you'll acknowledge me on the air.

That certainly violates the rule. I think voluntarily, and the FCC agrees on this, that my putting a couple $$$ or extra IRCs to help cover the costs is perfectly acceptable. If I include nothing more than a SASE, including those using the postage of the return country, in the large majority of cases, I get my card. I see website advertising the DXoperation soliciting donations, but nothing that ever states they are mandatory, that would be illegal as far as US based ops are concerned.

All boils down that there are still way too many questions and not enough answers. Once that happens this will become another remember when story.

BTW, did you know Jim, KH2D became a mainlander several months ago. Here's still living on an island surrounded by H2O, but it's part of the state of Fla. I remember you knew him when you were stationed there on Guam way back.

Have a good week

73, Steve

Thanks for proving that what I said is true, Ed. You *DO* automatically
side with Cecil regardless. Or you're just as witless as he. Do not either of
you read the news? There have been many cases of sounds coming from
within a destroyed building that rescuers could not determine whether or
not were being made by humans. Is that reason enough for everyone to
learn Morse code? Of course not. It sure is reason enough for Cecil to
act like a horses ass and for you to jump to his defense.

Perhaps marginally so, but that is NOT what the ARRL
asked for from the FCC, according to the account published
by the ARRL itself

> >> > SPECIFICALLY to limit the number of
> >> >hams "because the bands were too crowded."
> >>
> >> Incorrect.

> No, it's incorrect. The idea was to slow down the growth. Imagine
having
> too many newcomers as a problem!

SORRY ... the letter SPECIFICALLY states (read the quotes
again) that:
1) "the total number of amateurs will doubtless be controlled
```

in the future" [this is population control, not growth control]
2) "The total number of licensed amateur operators has remained
relatively constant during the past two years." [this indicates
no problem with growth, but with a desire to control the TOTAL
size of the population ... sort of "So 'our' (those of us who
are
currently amongst the 'haves') bands aren't more crowded
than we'd like, we want to keep newcomers out."]
>
> >Here are quotes from an article posted on the NCI website.

I am trusting that the ARRL published an accurate account
of their request to, and the response from, the FCC. Note
also in the entire article on the NCI website, at the end, the fact
that the article was researched by a professional archivist,
not by me ...

> >*********

that
> was the case back then.

So you say ... I'm more inclined to think it was more a
case of the "haves" vs. the "have-nots" ... the same sort
of "not in my sandbox" attitude that prompts so many
PCTAs to insist the such a ridiculous artificial barrier
to entry into the HF bands "must be maintained."

>
> > DeSoto goes on:

> >
> >"Obviously no competent person can be denied the right
>> to become an amateur.
>
> Which means the total number cannot be controlled, and
> this was realized by DeSoto, ARRL leadership and the
> FCC back then.

That's not what the letter says or contemplates ... the objective
is CLEARLY to limit the total population of hams by using
faster Morse requirements as a "filter." The letter also CLEARLY
states that the standards of competency had been raised "to
the point where it is many times more difficult to secure an amateur
operator's license than it was ten years ago." [This in itself
raises questions about the assertion that newcomers' qualifications
were truly lacking ... and points to a purely "control the population
for the benefit of the incumbents and to hell with everyone else"
sort of attitude ... sorry ... I've seen the "not in my sandbox"
attitude towards newcomers to ham radio too many times over
the past 25 years to be so naive as to not be suspicious of
the motives in this case ...]

> >The only justifiable restrictive procedure is to raise the

>
> Yep, it's pretty clear:

Yet, it was "many times more difficult to secure an amateur operator's
license than it was ten years ago." So, again, it seems that the
"haves"
simply wanted to keep the "have-nots" out of "their (the haves')
sandbox."

> "Observations show that too many licensed amateurs do not possess
> the qualifications presupposed by the regulations."

Yet, it was "many times more difficult to secure an amateur operator's
license than it was ten years ago." Smells pretty rotten to me. I
think
Mssrs. DeSoto and Warner "spoke with forked tongue" as they used
to say in the cowboys and indians movies ...

> >"A general raising of the standards could help to confine the

> and with other services.

Yet, it was "many times more difficult to secure an amateur operator's
license than it was ten years ago." And "The total number of licensed
amateur operators has remained relatively constant during the past two
years." Sorry ... still having difficulty being naive enough to buy
that
this was a "benevolant move for the benefit of all."

> >The referenced letter also states that "the chief opportunity for

> lacked the necessary qualifications.

In the view of the (self-appointed) "elite" ... who admitted that it
was
"many times more difficult to secure an amateur operator's
license than it was ten years ago."

>
> Using typical amateur equipment and methods of the mid 1930s,
> how many QSOs do you think those bands could support?

Typical response of the "haves" ... instead of accepting some
inevitable congestion and embracing new technology to solve
the "problem," take the approach of keeping out the "have-nots"
(newcomers) and remaining largely stagnant, while acting in the
role of the (self-proclaimed) elite ...

> >also, even if it

> getting on the "ultrahighs" - particularly after mobile
> operation was authorized there. But the results obtained were
> a far cry from what could be done with the same expenditure and
> complexity of equipment on the HF bands.

There's no such thing as a free lunch ... we hams are
SUPPOSED to experiment and develop better methods
("advance the radio art"), not sit around and bitch and
whine that things are "too crowded" and "we need to keep
newcomers out" ... we should be working to use our

spectrum more efficiently so that ALL qualified applicants
can be accomodated ... not generating artificial limits,
barriers, and elitist attitudes.

[snipped some lengthly detail, not to avoid the issue,
but only for brevity, trying to cut to "the meat" of the issue]

> Back in the 1930s, a typical amateur receiver had a passband of 10

>
> Proof of this is simple: Advanced hams were using SSB and
> single-signal crystal filter receivers by the mid 1930s. This
progress
> was driven by the crowding of the bands.

Fine ... so the "average" ham should have been adopting
this technology in response to "crowding" rather than
bitching an whining and doing noting to resolve it. Limiting
the population as an alternative to actually fixing the problem
is a crappy, self-serving, elitist "solution," IMHO.

> >Why did they *discount* improvements
> >in the written tests and focus ONLY on increasing code speed?
> >(And why only in reference to "controlling the population?")
> >
> Controlling - not limiting. BIG difference.

Actually controlling the total number of amateurs certainly
implies that establishing some limit was the idea ...

> >> >The FCC felt that 12.5 wpm was an "awkward" speed to test

> The same 1951 restructuring that gave us the Novice also gave us the

> Technician - which had a 5 wpm code test!
>
> Have you forgotten about the Tech license?

No ... the meat of the issue is, and always has been,
access to the HF bands.

> Your statement:
>
> "Learn to beep fast fast or get the hell out of ham radio."
>Some "welcome"!!!)
>
> indicates a hatred of the code itself

It does NOT indicate a hatred of the code itself ... it
indicates disgust with the way in which self-appointed
elitists, whose elitism was based in many cases purely
on code prowess, used the code for decades as a tool
to systematically keep otherwise perfectly qualified
people out of ham radio.

> >(Sounds a LOT like Larry or Dick ...)
>
> Why is that not correct - for 1936?

Because it's based on the elitist attitude that Morse skill
is the penultimate skill/knowledge factor that defines the
total worth of an amateur ... that is BS now and IMHO it
has ALWAYS been BS.

> >I respectfully decline to concede, absent some more

As I said ... we disagree ... let's agree to disagree. I don't have the time to compose such lenthy posts when there is little prospect that we will persuade each other to change our views, so why bother? You've said your views and I've said mine ... why don't we leave it up to others to decide whose views they buy and whose they don't? I can live with that ... freedom of opinion.

Josh ...

That was my impression from the start .. perhaps a bit too
eager to find fault, simply on the basis that you don't agree
with NCI's fundamental agenda?

> Yeah, I didn't like the tone of the news release, but I think what I

See, NCI is not "the evil empire" ... just an organization that
understands, and pursues its rights under, the regulatory process
and tries to keep its members informed of what's going on.

Are you *never* going to grow up and join the adult world? Evidently
not,
you've demonstrated the same juvenile attitude for at least the past 25
years.
That we can accept, but to deny that radiotelegraphy is BASIC radio
communications is inexcusable for a supposed professional. It is even used

by professionals to do some high tech things.

Yet, Ed ... I truly wonder how many hams who have been
licensed for 20+ years could actually walk in and pass
those "easy, dumbed-down" tests of today without some
considerable practice and study ... unfortunately, for the
ARS, I'd be willing to bet that the the percentage would
be disappointingly ... even disturbingly ... low.

Uhhhhhhh Dick, BASIC is a programming language. And nobody has denied
that radiotelegraphy is basic radio communications. In fact, it is so
extremely basic that we don't need to test for it anymore.

I've never had a memory keyer before and I hated sending a 12 character
QTH twice each QSO. The memory keyer on my new IC-756pro solves the problem.

Dick, please describe how International Morse (the one that hams know)
can be used with a pipe banging on a pipe. How do you get the 'dah'?

I'm picturing myself trapped in a collapsed building with a pipe in
my hand banging on another pipe. Exactly how can I use International
Morse code to communicate? What would I say? 'Hurry!'? Even if I
could send telegraph sounder code, virtually nobody would be able to
decode it, including most amateur radio operators.

So hams preparing themselves to use the most basic radiocommunications mode
is bogus. We see where you're coming from. You're one of the people who would rather have no communications at all rather than "use that old stuff".
That is exactly what I heard an administrator say once when all the computer
comms were out of service and we HAD no communications.

Welcome to the 21st century, where either it's high tech or it doesn't exist.

You guys obviously have a difference of opinion, like Ford Vs Chevy.
What's wrong with allowing both of your guys to prepare for emergencies
in the way you each choose to prepare? What is wrong with live and let
live? Nobody wants to take your CW preparedness away from you, Dick.

Try using (whatever) after a large EMP event.
The issue is whether physical devices will be
"fried" ... not whether a mode will work or not.
(And let's not get into the "cobble something
together in the field from scrap parts" argument.)

Actually, there was something published (I believe
by the ARRL) some years back that indicated that
most ham gear, with reasonable precautions, would
do surprisingly well in the event of an EMP.

> > As someone stated, the nets that exist to pass such radiograms

> > but because "it's always been that way" and the nets have come
> > to create most of the traffic solely for the purpose of justifying
> > their own continuation.
>
> Ah... so next up is No Traffic International?

No ... let's not be ridicuous ... if people enjoy the exercise
of passing traffic via the NTS, who am I to try to suggest
that they stop? The only point I was making is that NTS
type "radiograms" are not what emergency management
folks need or want and that the NTS creates a lot of
message traffic simply to jusify its continued existence.
(again, if people enjoy the activity, that's fine by me, but
let's not distort reality to the degree of asserting that it is
an essential function any more, when it's pretty much
devolved into a recreational activity ...)

In the cases I cited, the operators used CW because SSB WOULD NOT GET
THROUGH. Other modes were NOT available, or would not get through.

Let me repaeat that in case it's not clear: In the cases I cited, CW
was used because SSB simply couldn't do the job, and other modes were
not available.

Carl, let's see you cite the "vast majority of cases" where other
available modes would not work.

> Operator choice based on preference is fine ... however, it is
> not legitimate to infer from this that the use of CW is ESSENTIAL
> in any way to emergency communications.

I'm not saying that any mode is essential. Personally, I find it
amazing that digital modes (voice, image and data) are not more used
by hams in emergency work.

But the categorical denial that CW/Morse plays any role in emergency comms by hams is simply false.

Geesh, grow the F*** up! What do you want? Papers? Where are
your PAPERS!! Photo IDs? 7 day waiting periods? On line verification
of a license before sale? Give me a break!

I bought my Swan 500C as incentive to get my Novice ticket. BEFORE
I had any HAM license at all. I got the Swan, listened to my friends, and
practiced listening to code. Finally got my ticket.

I bought my Kenwood TR-2400 as incentive to get my Tech license.
BEFORE I had privileges on 2M. Listening to 2M gave me the bug to
get off my butt and over to Dallas to take the test for upgrade.

My Alinco DR-590 dual-bander for my car was a birthday gift from
my wife, who DIDN'T have a ticket. You're little Gestapo tactics would
rule out anyone buying a radio as a gift.

I had decided (but actually didn't buy it) to get a K2 as my incentive to
get back into CW and upgrade. Opps, should I not be allowed to buy
a radio out of class?

Little people with little minds making a big agenda to control anyone
they can, any way they can. And when they can't build themselves up,
they try to put anyone else into a lower class. Hey, it's all relative.

This kind of 'attitude' makes me be ashamed to be associated with some
HAMs. The 'little' people who just have to be controlling of anyone they
can, and make a big thing out of nothing... I had a boss one time like
that. Managed by putting the people under him under his thumb. Didn't
last long...

Mike

How do you suppose Morse got it with the telegraph sounder?

The point is, if someone trapped could strike three quick taps, three with
longer spacing, and then three more quick ones, wouldn't anyone who
could read Morse code instantly recognize that as SOS, instead of some
part of the building just settling?

Have you been inside a cocoon for the past 65 years?

The basic need is SOME sort of method to inform rescuers that there is indeed
a survivor in there somewhere. Again, what better than SOS?
If prisoners of war can invent a tap code to
use to keep in touch with each other surely hams can learn 5wpm Morse code.
If they don't want to use it they can consider it a public service. New hams aren't

really selfish, are they? That's what your attitude projects, that they are too
selfcentered
to do such a minor thing as learn the basic radiocommunications mode.

BUT, guess which mode makes it possible to communicate first, when the ionosphere begins gto settle down? Sure isn't SSB. It isn't CW either, of course, but CW sure comes back before SSB.

Cecil, there are any number of people on this and other groups who can use
both clacker (American, Continental, railroad, etc) Morse and
International Morse on both clackers and beepers. I will grant you that
it will take a bit of OJT but it should not take too long to figure out
that di-dit di-dit is an L. At first it will be di-di-dit dit di-dit a
lot but it will work.

Simply a wetware mode in a distinctly wetware situation. The only solid
state stuff in the vicinity is the concrete burying the victim. To
continue this exercise would be stupid but it is a great place to start
until the neat hardware arrives.

I recall a commercial a few years ago for SOS steel wool pads. Pots and pans were banging out the distress signal. This pattern could be easily recognizable if it were tapped out by banging on a pipe, but anything else beyond that would be extremely difficult.

Sounds like another misargued case. There's NO First Amendment issue here.
The issue should have been the grant of the "station license" and the 10th
Amendment (the state has no rights to regulate [in conflict] something that the
federal government has specifically reserved to itself). The appeal was moot
since he died.... Oh well.

Okay, you dumb F*** -- see how stupid that looks.

Come to Lansing Michigan and see how long it takes for you to change your mind. CBers walk right into Radio Shack, buy their mobile radios illegally and start jamming our repeaters. But maybe you want that.

By the way, next time you send a post, why not try using your real email address. Your pathetic attempt to hide your identity only discredits your argument.

I was unaware that ALL of these "loopholes" have since been closed. We got to get that reversed....

Aside: Speaking of "pretzels," you should see the mess that California creates for income taxes when they fail to [timely] pass their "conforming bills" after each federal tax law change. I'm at the point where if they pass these late (i.e. after returns have been filed), retroactively, and the change is not beneficial to the taxpayer, too bad - no amended return (for it was correct when filed). I really liked the Roth IRA conversion spread for 1998: Congress permitted an election for NOT taking the spread, but California, through March 15, 1999, had not - the spread was mandatory. That by itself was a headache.

Wrong. FCC regulations, effective April 15, 2000, have NO MAXIMUM for VE
session fees.

$10.00 is simply what the ARRL determined was necessary for them to cover all
their costs (as one of the largest VEC's). However, it's not a cap.

1) A retailer is not the police (including the FCC).

2) Such an action may preclude surprise gifts for amateurs from their
unlicensed family, relatives, or friends.

3) Even if purchased by a licensed amateur, there's no guarentee that he
didn't actually buy it on behalf of an unlicensed individual or for immediate
resale to one.

They should mention that a license is required and perhaps "push their book"
and the local test session if they find the purchaser is unlicensed and the
item is not a gift for someone who is.

Well, are YOU that stupid? It's pretty easy to find out who I am.
I mean, I DO post with my real name. If you want my email
address, it's easy enough to find. The 'joe@user.com' is just what
HP leaves in the envelope when you buy their machines and don't
change the default. In fact, in all the years I've been on the internet,
(and the old usenet demand thing before that) you're the first person
that's ever even voiced the idea that I was trying to hide my identity.

Or do you think it's ok for you to doctor yours with 'nospam' and
that's the only acceptable way of doing things?

Like I said, small minds want to control all they can...

You discredit yourself, I don't need to do anything more..

My argument and assessment of you and your idea still stands.

Mike

To what end, Ed? It is Kim's contention that because no CW traffic was generated during the WTC disaster that it is an invalid mode for use in emergencies. Kim seems to think that the only emergencies that take place will be on the same order of the WTC bombing. She believes that because she is ignorant of the use of the mode, everyone is. If you want to play games with Kim, YOU fill in the blanks. I'm still of the opinion that her conclusions are those of someone hindered by lack of information.

Many of Kim's views are formed from a similar lack of knowledge of the subject at hand.

These new fangled notions are slow to catch on in these parts. The
nearest Home Depot is about 45 miles away. I used the money I saved on
antennas.

> Like you , I was the DX. And being the DX, I worked a lot of DX. So sorry.

I've known any number of hams in any number of fairly rare spots who
didn't know what they were doing in handling a pileup. I've likewise
encountered many U.S. hams who were doing nothing more in pileups than
wasting electricity. You didn't address my reply to your statement of
my views toward those holding Tech Plus tickets. I maintain that I only
commented on you as an individual and never singled out a license class.

> Meanwhile, you couldn't handle the idea of a Tech talking to FR6 daily, like
> he was in KP4-land.

I haven't the slightest idea of what you mean by "you couldn't handle".
I'd have to know about it before I could decide if I could handle it or
not.

> You just need a few more years on the noisy side of the
> pileup, and you'll lose your snobbishness. Well, maybe you won't.

Brian, I had 22 years of the noisy side of the pileup before I ever operated overseas on the ham bands. What you call snobbishness, others would call experience.

I do just fine on this side of the pileup, thanks. Nailed a 5R8 on 6m the other day and have added about 20 new ones on 160 in recent weeks. Am I supposed to be suffering while chasing DX from the U.S.? Maybe I should tear down a couple of towers and put an attenuator on the RX side of the Omni VI +.

Of course that contact is not valid reguardless of the method of QSL. If
the other station sends back KF2D, and they were supposed to send KF2, you
should correct it on the spot, before you hear QRZ.

Well, I don't think that a retail outlet can *not* sell radios to anyone who will pay for them. I don't think it is illegal to own one without a license.

Now, it is definitely illegal to transmit without a license.

Many hams routinely stage "fox hunts". This sounds like a really great opportunity to have one. If the miscreant is jamming the repeater, have a fox hunt, and track 'em down. Sounds like fun to me. Gather your evidence, hand it over to the authorities, and let 'em rip.

Only a person totally ignorant of logic would think it is a bounded case.
Draw the symbolic logic diagram. You will find it is unbounded. A circle
can represent when SSB gets through. Everything outside that circle is
when SSB doesn't get through and is unbounded. If "when SSB doesn't
get through" is unbounded then "CW gets through" is also unbounded,
by definition.

Hopefully, you are aware that a telegraph sounder is NOT International Morse
and that most hams could not read Morse code sent over a telegraph sounder.

Nope, anyone with International Morse training would assume it said:
'S E E E S' and move on. You cannot be serious. Would someone involved
in a rescue attempt ignore the tapping because it wasn't Morse code?
You PCTA guys are worse off than I ever imagined. You would let someone
die because their tapping didn't sound like Morse code?

So if I forget to tap out an 'SOS', you just move on and let me die?
Don't you think that's taking the Pro Code Test Agenda just a mite
too far? What if I'm one of the 99.97% of the population who doesn't
know Morse code? Do I deserve to die because I don't know Morse code?
Does your wife know Morse code, Dick? Would you let her die because
she didn't tap out 'SOS'? Good Grief!!!

> lot but it will work.

Egads, Dick, what are the chances of the trapped person and the rescuer
both being able to use railroad code? You PCTA folk are so far out that
I don't know where you get your oxygen. Probably 0.01% of the population
knows railroad code. For any two random people to know it would be 0.00001%.
I think I now understand what Kim is saying. If the chances of Morse code
saving the day is 0.00001%, why bother?

By taking this completely irrational stand, Morse code is disgraced. With
supporters like that, Morse code doesn't need any enemies.

What we want is the freedoms guaranteed by The Constitution. Do I have
a right to buy a gun even though I *might* use it for criminal activity?
The use of such by an unlicensed individual is a crime. The mere ownership
of such is NOT a crime, not should it be.

Agree 100% that the contact is not valid and I am sure the real KF2D
would not accept a card for a contact that he did not make, but the
point is that a card was generated with the busted call.

As to why, I still hear the TI, even if the sending station is sending a
D, so he records the wrong call and I record the contact as good. I
doesn't happen too often, only when the pile-ups are big and you need to
get the call out very quickly, BUT, it still happens from time to time.

Normally if this happens and I get a NIL on my returned card, I can
contact the station and have him check for the busted call as long as my
date and time info are OK. Quite often the real good qsl managers will
pick up on it and correct everything as well.

Still gonna be a sticking point

> I hadn't heard. Makes me wonder who'se running the KH2 buro.

Jim was running the buro for many years and it was shut down several
years ago. If memory serves, the huge number of cards were actually for

Japanese stations that got KH2 calls and never bothered to subscribe to the Guam buro, so in the end it was costing JIM big$$$ out of pocket. Perfectly acceptable decision if you ask me. At this time there is no more KH2 buro. In fact, the only "real" KH2 is Danny, KH2JU

I am suggesting that there is not that much diff between copying a clacker
and copying a beep, some to be sure but not so much as to preclude
communication as witnessed by the number of people who have done it and do
it on the bands in American Morse. It is a wetware exercise, not an easy
one but not unsurmountable even in the heat of a problem. I think you
have been playing with chips so long that you can't believe that the brain
can make the switch between leading and trailing edge detection a lot

faster than you are going to rebuild the breadboard.

I would agree with you that none of this justifies testing on the subject; I would also agree that if prearrangement is possible a 5x5 or 3x3x3 matrix makes a far better tapping code. But in the heat of the moment, in the rare case where the victim is a pilot or mariner who learned Morse to copy beacons by sheer osmosis or an ex Cub Scout with a good memory, the 'implied dah' is not that formidable to overcome where it is the only method available.

The whole issue is the three-cornered war among those who simply enjoy and have enjoyed the benefits of Morse, those who are so enamored of silicon as to want to ban anything that confuses their compooters, and those for whom the mike is the end of the technical world. If anyone is out on an extreme limb here, Cecil, look in the mirror.

The whole thing is pretty silly to begin with, grant that.

Dick N&#65533;BK

Good point!

NO ONE (regardless of what some small minds would like to imply)
has bought a radio illegally at Radio Shack. (With the possible
exception of some HAMs who came into Radio Shack in Jan of
1978 after the cutoff date and bought the 'junker' 23channel CB sets
to convert to 10M.)

It's how they USE them that's illegal. And know what? I'd be willing
to bet odds that if they actually tracked down the people who do the
jamming, they'd find a few HAMs in there too... HAMs who are
probably just expressing a grudge against the repeater and some of the
people on it.

I just wonder how some of the 'small minds' out in that area treat outsiders
to the 'clique' on the repeaters? They might have a real surprise if the
situation were to be really inspected!

Just how effective do you think a law would be?
Answer...it wouldn't. Ham radios are sold in
many places besides Radio Shack.

Cheers,
Bill K2UNK

I think you're reading things into my post that aren't there and aren't intended. You of all people should know from my arguments with Dick, Larry, and Babbling Brucie, that I have no "pro-code test agenda." SOS is only one sound pattern that is recognizable to most people. "Shave and a Haircut" would be another, or anything else that gets the attention of rescuers. However, my point is that trying to carry on a CW-like conversation by tapping pipes would be extremely difficult. There's a big difference between trying to get attention and carrying on a QSO.

In article <3C7A2E5F.98CE78DE@earthlink.net>, Dave Heil <k8mn@earthlink.net>
writes:

>Communication work doesn't have to be "important" at all. We in
>Guinea-Bissau had no responsibilities to warn anyone of a nuclear
>holocaust.

Excuse for not getting that single-channel State Department
RTTY "synchronized?" :-)

>You must have been thinking of my 2nd AF commo days, Len.

Couldn't have, big Dave. Not having an authorized callsign in
amateur radio made me "ignorant" of your time inside Cheyenne
Mountain. Tell us how you liked it in there. Were you affected
by claustrophobia when those big blast doors closed?

Were you a child prodigy and a consultant to Curt Le May?

Does the Joint Chairman (General Myers) know of your
importance, etc.?

>We did do some work with NASA though. Do you know anything about that
>or did it not happen because you were unaware?

Well, big Dave, I've seen a LOT of NASA documents, both
classified and unclassifed, and can't recall any mention of
anyone surnamed "Heil" doing "work" for them.

Nobody at Huntsville or Michoud or Vandenburg or JPL or Clear
Lake mentioned your name. ["Houston, you've got a problem!"]
Never made it to the Cape, though, did you "do work" there?
In all honesty, some small talk at a restaurant in Santa Maria
did mention "Heil" but that was all about music systems
and sound equipment, not space things.

Spent a fair amount of time at Santa Su for SSME instrumentation
on static test stands, lots of hands-on with spacecraft fabrication.
Did you look cute in clean-room clothing? How did the finger cots
feel to you?

>We already knew of the self-glorification and romanticizing. We've seen
>your earlier and frequent descriptions of your Army service.

Feel slighted? :-)

Geez, big Dave, you really didn't understand the mention, did you?

I simply DESCRIBED US military HF communications, information
that had already been made public long ago. Mentioned for
CHRONOLOGICAL REFERENCE to methods and procedures and
technology of the biggies in 24/7 HF radio communications.

I never claimed any credit for designing the systems. Those were
already implemented well before I could even enlist. I did my job,
got my Honorable Discharge after eight years. It was interesting,
challenging, and offered a unique opportunity to be a part of
BIG COMMUNICATIONS in addition to serving my country in
uniform. There was a war on at the time, but it settled into a
sort of permanent truce. Guess that was before your time in
"the 2nd AF commo" wasn't it?

Oh, yeah, I got a good conduct medal and mentioned that once.
That must be the "glamorization and romanticizing" you charge. :-)

>Much of the material I transmitted and received was and is classified.
>Much of the methodology and technology used is classified. I signed
>forms indicating that I understood this and that I'd not reveal
>classified information under penalty of law.

Wow! Du bist verrrrry important!

Oh, my, myself and few hundred thousand or so civilians and military
contemporaries of mine had to operate THE VERY SAME! Yup,
Confidential, Secret, Top Secret, DOE nuclear, background checks,
forms up the gazoo, photographed, fingerprinted, all but retinal-
scanned, interviews with the FBI (about others) as well as FBI
interviewing friends and neighbors (for me), steel-bar-locked file
cabinets, even walk-in safes, passing through many a turnstile
talking with a disembodied voice after surrendering your wallet
and badge to a remotely-operated drawer, NEED TO KNOW
stamped on every neuron and synapse, never lose a badge,
security and vigilance and constant reminders of (which Title, Phil?
18?) espionage laws, national security, having ones life-of-the-past-
10-years details filed with a dozen federal agencies from the FBI
to DECASS.

STANDARD OPERATING PROCEDURE, big Dave. You, me,
and HUNDREDS OF THOUSANDS OF OTHERS. No big deal.
Fact of existance. Par for the course. Work environment.
No heroism, no medals, no certificates, and never once did I
need to know morse code or take a VE test. :-)

>That it bothers some
>wizened, embittered geezer in California is pretty insignificant.

When I find one of those, big Dave, I'll let you know so you can
feel "justified." :-)

>It hasn't effected my ham radio activity at all.

...except in this newsgroup cum chat room. :-)

>More of your "it can't have been since I never heard it"?
>State had very few HF (AFRECONE) primary posts in the 80s and early 90s.
>Almost all were in Africa in countries where the infrastructure did not
>support leased line communications. CW was used for openings, closings,
>QSYs and to agree upon crypto sets for use. It happened. It took
>place. It was used daily. Don't let it eat you. Get over it. Go on
>with your life.

Yes, yes, yes, you were a VITAL ASSET for the Free World. Feel
free to digitize your Foggy Bottom certificates and send to everyone
for Glorious Proof. Let me know when your name appears on a key
list or in the page of honorees at the newly-revised NSA website.

Big Dave will be shocked to learn that early Cold War crypto gear
is very publicly known. There's a bunch of info and links to even
more info on such at the SSN Pampanito website, folks touring
that submarine (now a floating museum) might even get to TOUCH
a real, but not very live, CRYPTO MACHINE! Funny thing about
those old machines...didn't need any CW to "synchronize" any
part of them nor their schedules. SOME of the just-before-CWO-
Walkers' USSR sell-out crypto gear IS KNOWN to the electronics
industry and has even appeared on a couple of TV documentaries.
I daresay your burn-before-reading-classified machinery will soon
become public. Goodbye to your labels of mystery, glamour,
romance, self-importance, and all-around superhumany.

>Take up a hobby--maybe ham radio.

That's a nice suggestion. Thank you.

I've been a radio-electronics hobbyist for about 55 years, a
professional in the same general area for 50 years. Even
wrote up magazine articles on ham radio technology in a
magazine whose name was HAM RADIO! Fascinating
technology, big Dave, you ought to learn about some of that
technology. It might help stoke your boast furnace.

>What will we do about the stupid?

Educate them. There's a great BIG radio world out there! All
kinds of technologies and advancements in the radio arts. It
can be scary to the beginner, the boaster, big Dave. To begin,
get yourself educated. Then you lead the others.

>You've been ignorant before.

Absolutely, big Dave. I'm totally ignorant of what goes on within
your head to make you act they way you do in this newsgroup.

>You've
>been enlightened yet you continue to rail as if you can't accept
>reality.

Poor baby, confusing fantasy and reality again. I was born in
the 1930s but I didn't choose to live there or in the never-never

elsewhen you've promoted. I realize there IS a problem in starting out as a professional in HF communications. Once exposed to such a large, working reality in the 1950s, I've never been able to accept the artificialities of 1930s standards and practices that you and others set up as the epitome of radio arts, along with titles, status, and privileges and the "qualification" of the glory and nobility from being able to affix a radio station callsign on my name.

>That would have to make you stupid since you are attempting to
>argue something you know nothing about with someone who was there, has
>done it, has the T-shirt and the souvenirs.

Heh, heh, heh. Would you like a RACES card to add to your "souvenir" collection? Foggy Bottom had a couple of RACES, or did you know? :-)

>That would be as goofy as a non-ham telling hams how it should be.

Yes, isn't it awful? The FCC has been doing that to hams since 1934!

Ignorant morons, the nerve of them! Shame on them, ey? :-)

>quite a large presence in Guinea-Bissau back in the '80s. The Cubans
>had an even larger presence. Cuban troops returning from Angola and
>troops preparing to go there flew Aeroflot from Bissau.

Now, now, big Dave, you DO exaggerate a bit about "importance"
RELATIVE TO OVER A DOZEN OTHER NATIONS IN MIDDLE
AFRICA which had or still have a strong communist leaning,
governments, and staging areas for USSR troops. Bigger countries.

Despite all that "influence" and whatever can be implied about "aid"
from the old communist block (look up the year the USSR was
dissolved), last year's World Almanac STILL lists the chief export
of Guinea-Bissau as cashews and peanuts. Now that IS important
to nut lovers the world over, especially nut gourmets who love
cashews. On the world scene of geopolitics, Guinea-Bisseau is
still a "4th World" country struggling to get up into the "3rd" category.

>activity including USIA programs and libraries. Military assistance and
>training is another program the U.S. supports. Because no one sent
>Leonardo Heathcliffe Anderson a letter, those things can't have taken
>place.

Gosh, big Dave, no "letters" seem to have been sent to the big
wire services like AP and Reuters stressing the ENORMOUS
IMPORTANCE of that particular country and its been a long, long
time since a video bite from a TV correspondent. I don't see,

haven't seen much mention in any big historical write-ups either,
but, of course, you've just cleared this up.

>It might
>interest you to know that, for most of my two year tour in
>Guinea-Bissau, I was the only ham in the country. I made over 75,000
>QSOs on CW, SSB and RTTY on 10 through 6 meters.

Now THAT is of extreme importance...to DX-chasers. Imagine, a
RARE ONE not on a "DXpedition" but actually LIVING there!

As the ONLY HAM IN THE COUNTRY (out of how many, 1.3 million
population) does that mean big Dave "pioneered" ham radio in
Guinea-Bisseau? I guess so. A big PIONEER award to big Dave,
then. Did big Dave act as an "elmer" to Spread The Word of
Ham Radio there to the population? Dozens, hundreds eagerly
awaiting The Word, guidance, and leadership? Just curious.

>It is always nice to receive a history lesson from someone on the
>outside whether the subject is my work (which this isn't supposed to be
>about) or amateur radio which this doesn't touch on at all though this
>is an amateur radio newsgroup.

I've never elevated any STATE DEPARTMENT work or the IMPORTANCE
of Guinea-Bisseau in communications, or implied Great Secret Mysteries
of (horrors!) CLASSIFIED COMMUNICATIONS WORK! Maybe that's my
fault for not honoring an "unsung hero of government!" Terrible. Boo on
me for not bowing and scraping, saluting and kissing the ass of a self-
professed one-by-two "radio champion."

What I did originally (and big Dave is still smarting from ego blasting)
was to bash a snow job to others who had not worked any gubmint
comm on HF, would therefore be unknowing of what went on. Big Dave
tried to rationalize his way out of an avalanche by kicking in artificial
snow job machines about "procedures in government" and the usual
"insider" crap with overtones, implications, etc. of his "greatness."
The final snow job is the insistance that "if you haven't been IN it as a
FULLY AUTHORIZED PARTICIPANT you then DON'T KNOW
ANYTHING."

There's a terrific amount of PUBLIC INFORMATION available to the
public (that's why it is called "public") on just about EVERY area
and activity of the entire radio world. That INCLUDES military
communications, believe it or not. The problem with arrogant
elitists in a hobby activity is the ONLY radio information input they
have is from (guess what) their hobby activity's publishing media.

Is that a slam against amateur radio? No. It's a slam against some
of the editors and publishers who selectively spoon-feed their
readers what they (or the organization they work for) think
"important to hobbyists." Big Dave, there's your opportunity for
another Big Personal Attack again, feigning "insult against ham
radio" and assorted outrage. For a little while I was an INSIDER

of a part of that small part of the publishing world. HR didn't live in the midst of ancient fantasy and self-promotional propaganda and lasted 22 years. Another self-professed ham hero thinks they were a "failure" but then he was never any sort of insider in ham publishing.

You continually ATTACK on the specious claim of "ignorance of not knowing anything because of lack of AUTHORIZATION." Such is specious and vapid considering that amateur radio activities are one (if not the top) of the most OPEN areas of information input in the entire radio world. It is a hobby activity pursued mostly by civilians with many publications and references. Further, communications by encryption for the purposes of secrecy is specifically prohibited by both federal law and international agreement. Anyone with a receiver can hear/see EXACTLY what other radio amateurs hear/see. The only barrier that is real is natural, the physics of EM wave propagation and terrain. Within that real boundary there is NOTHING "secret" except for curious mindsets who think that all must think as they do or be considered "inferior" or "unworthy."

>Did you have anything on amateur radio you'd like to say?

Yes. It is my opinion that amateur radio is an interesting, enjoyable recreational activity that allows non-professionals to engage in the fascinating technology of radio communications arts within the narrow mode selections and frequency bands allocated by federal agencies. It is supposed to be a social gathering point where individuals can convene, make friends, share information, socialize as other groups do for the sheer enjoyment of socializing.

Not all AUTHORIZED radio amateurs seem to think so. Quite a few seem to think that they are elite in radio, superior by achievement, some kind of important national asset, vital and valuable, fantasy "minutemen" available instantly to perform "emergency communications" to save their community, nation, and world from disaster. In short, self-styled supermen with an ego fertilized by myth and legend originated by predecessor self-professed supermen of the same kind.

The appearance of so many self-styled supermen is not unnoticed by majority of radio-active folks who are not AUTHORIZED to "work" ham bands. That appearance is not a good one. Strangely, although they claim super powers, their vision is lacking. They cannot visualize how others see them. Their super ego clouds vision. Some appear as comic book heroes.

Shazam, big Dave, you are a marvel. Now go leap tall pileups at a single bound. Leap high. Your own pileups are very big.

Cecil, you need to take a break and see some motion pictures. That
will clearly demonstrate the ubiquitosity, essential qualities of morse
code modes in all sorts of emergency situations.

For example, blinker morse code can be used to communicate with
USN fighter interceptors who are armed and ready to shoot down a
hijacked 747! We've already been treated to the absolute proof that
window shade blinking was used by a victim on a still-erect tower
of the World Trade Center.

Morse code can be of extreme value in saving an entire world!

Motion pictures have pictured it very well, I think...
:-)

Oh? Was Virgil I. Grissom called "Bubba?" I've never seen anything
for a nickname other than "Gus."

Of course, everyone knows that motion pictures are proof-positive
prima-facie references. Good old morse code saves the day on
airliner hijackings and outer-space alien invasions and ham radio
can do time travel with the right atmospheric conditions.

>experience.

Sorry to bother you so much, OM. My experience involved frequency-
multiplexed multiple voice channels on a non-amateur microwave band.
That's not comparable to ham SSB that was "pioneered in the 1930s."

Those who critique someone else's innovation (that used 2N3904s)
and never said boo about the details but just critiqued by saying
older, allegedly-better methods doesn't have as much experience
in solid-state as they imply. The 2N3904-2N3906, or 2N4124-2N4126
general purpose transistors have been in common use in industry for
THIRTY YEARS. Their price today is about 3 for a dollar in small
quantities, THE SAME PRICE as it was 20 years ago!

Jay-suss, there's a heaping big snow-job falling all over and or wayyyy
to many haven't left the 1930s. Hello? Thirty years ago was 1972.
This is the year 2002.

"Expertise" in radio is touted as "knowing all kinds of things about
grids in vacuum tubes." Yeah, sure. And morsemanship is the
ultimate in amateur radio that is supposed to be a vehicle for
"advancing knowledge in the state of the radio art."

I just looked the author up on the internet (Altavista). Read a review of that book (which, apparently, is a rare book). Then, came across (of course) this from an opposing point of view: " 'This seems to be the case with Ibn Warraq who writes that he was born Muslim, but who now considers himself a secular humanist "who believes that all religions are sick men's dreams, false-- demonstrably false-- and pernicious.' " [emphasis is the author of quoted material]

Maybe I'll get the change to investigate further...I always deeply desire an unbiased point of view...LOL...they are hard to find in politics and religion!

I think when a Fire Chief I am shadowing wants me to relay a message over to the other end of town that additional tank trucks are needed in about 45 min., along with some relief provisions for 30 men, that the Fire Chief would much rather hear me say that than to wonder if I sent the right message.

I think if the Red Cross is liaisoning between an official government entity and a volunteer agency, and the message needs to be sent that volunteers are need at Area A, some relief can be made by transitioning some folks from Area C over to Area A, that the Red Cross person I am shadowing wants to hear or know that I sent the right message.

Don't they? I'll ask the Hunt County Emergency Management Officer and the City of Greenville Fire Chief the next time I see them what they would prefer. Maybe it's different from town to town, but I think our served agencies aren't going to want to wonder if what they said got relayed correctly.

IF it was a problem it would be a very mature problem. Maybe it is.
Trying to change the effects of it all at this late date is futile. And the cure
might
easily be worse than the disease.

I wish there were a way to statistically show how often/much CW is used in emergencies--and *not* using H&W, because I do believe there are some people who still use CW nets on NTS---those are *not* directly from the scene, not operational messages.

Anyway, I am certain you are confused by my above sentence. I give up even trying with you, Jim.

The blatant ludicrousness of victims tapping out CW to get rescued is that all anyone need to is just tap, or bang, or kick, or yell, or.... CW taps coming from victims at a disaster scene is something I just ain't buying. Any noise is a potential call for help...and I hope all of you proponents of CW realize that.

Joshua: I request that you try not to be so quick to buy into the routine that just because something "comes under question" in ham radio, that it means there must be an agenda of some sort. That there are people who don't think CW is as important for emergency communication doesn't mean they are speaking against the mode...and neither is NCI I don't think.

My statement about CW traffic nets was that there are CW traffic nets (not to be totally circular here :)). All NTS in this area, save the occasional Handy Hams message, etc., are contrived for the sake of the net itself. Does that mean I am speaking against NTS?! Hell no, not at all. NTS is great and the messages are contrived to stay in practice. The NTS is probably the best organized communication group there is...and they stay at it as ARES and RACES should. I can guarandamntee you that if a disaster arises, net activation will be second hat to NTS folks, while most ARES and RACES groups would probably flounder for at least a few minutes anyway.

So, just because I say "most NTS messages are contrived for the sake of a net" don't take that to mean that I am anti-NTS. You emulate a Dick Carroll, Larry Roll, Dave Heil, etc., when you do that. Their loudmouthed insults are just that and nothing else, if you go back in time and follow forward.

Man, talk about someone worse off that anyone imagined. FAR worse.
You're the original Mr. One Dimension, to be sure. Not a clue. No wonder
you could never do 20wpm. It takes imagination. Before long you can discern
things like random building noise from structured, human-sent symbols. When
they are so close in form to an internationally recognized radio distress signal
that you were tested on over 50 years ago you WOULD be expected to
recognize it. Alzheimer's is a terrible thing....

If you're so stupid that you can't realize that you really need to make a
structured
noise that can easily be identified as of living human source, one that won't be
lost in the din of the settling ruins, that is most likely what any rescuer will
do.

You really need to get some help, OM.

End of story.

Yep, you're right, Carl. NTS style traffic *and* CW are both by the wayside from what I've seen and heard on nets -- at least around here. Amateurs may choose, at their discretion to send H&W traffic via CW and that's terrific...but for the on-scene communication effort, straight forward phone seems to be the desire.

Probably never, given history and the pace of technology these days. The vast majority of hams just don't move to new technology that fast. Never did, probably
never will, since ham radio is basically for fun and no profit. As KH2D said, a lot of this new stuff just has no magic, at least for a lot of hams.
So does it have to be super efficient like Pactor 2 or you dump it? Why not have a little fun with some other modes, like PSK31 or even Hellschrieber?
You and Stevenson need to be on a desert island together, with nothing but two tin cans and a SHORT string.

> Opon the second reading of your posting: Are you aware that an EMP will

And, Mr. Black & White, since when is a statement like: "I am simply stating that it is my opinion that CW is not a p-r-e-f-e-r-r-e-d m-o-d-e [emphasis added] in an emergency" to be construed as a *categorical* denial that CW/Morse plays any role in emergency communication by hams?

Yeah, I got sucked in again, didn't I?

And, why not call what those prisoners do, exactly what it is...idle
chit-chat, news from the next cell, etc. It is *NOT* "messages" of *HELP
ME* that they are sending. On a disaster scene, any banging should be
investigated...ANY.0

No one, not one person, should be required to do more than they are willing/able/capable in public service. I would no more study CW for public service than I would stand in the heat for a parade down here.

Yeah, when you're banging, the time length between bangs is the measure,
rather than the time length of the tone...dah or dit vs. tap-tap-tap
tap----tap----tap tap-tap-tap. HOWEVER, I maintain the attitude that
simple banging/tapping/stomping/pounding will do the trick in an
emergency...

Actually, the issue in regards to CW vs. voice would be the disruption to
the ionosphere that would occur immediately after an EMP blast.

> Actually, there was something published (I believe
> by the ARRL) some years back that indicated that
> most ham gear, with reasonable precautions, would

Yeah, that is basically what I am saying...however, anyone who would wish to
bother having CW in their repertoire is bigger and better for it. My point,
now that you and maybe some others are understanding, is that keeping the
test element for CW because it is such a worthy emergency communication
mode, and public service mode, is not the argument we want to put forth. It
is *not* the reliable mode it once was--as operators are less and less.
And, no, keeping the test does not keep the operators up.

OK, now we can start all over again...LOL

Uh yuh. I am sitting here laughing hysterically at this: imagine the Little Tweety Bird who states all the time, "I tought I taw a puddy tat..." Now, transform that to Little Dick on a disaster scene: "I tought I hud a dat dat dat when dere was 'sposed to be a dut dut dut..." And, the rest of the cartoon world comes into play: "Which way do I go from here, which way do I..."; "I say, I say, Son, slow down."

While Dick is standing there in the rubble trying to figure out what he just heard, I hope there's a lucid person around who's already begun running in the direction of the sound they just heard...

Oh my God. I hang my head in shame and hope that anyone who reads this newsgroup who is not a ham--and even those who are--would never believe that this person (I'd like to call him a jerk, but I'm trying to be truly serious here) is representative of most of the rest of us.

Most any rescuer will attempt investigation of any sound they hear. This person (jerk) just has such an agenda of hate and contempt that he can't get passed it.

Yup,

Does anyone think a "law" would stop all the CB shops around the truck stops
from selling
those so-called "10 meter" radios? I doubt it.

I'm told by a local Radio Shack manager that it is a policy of Radio Shack
(Tandy, Inc.) not
to sell amateur equipment to unlicensed persons. That is an internal
decision by the company,
according to the manager--who is a ham, BTW. Now, that doesn't mean that
IF such a
policy exists, that it doesn't get violated by locals. I'm just repeating
what I was told. I do
know that in the store I frequent, the manager will ask for a license and
explain what the radio
actually is. They often get mistaken for "CB" radios.

I defeated CCR's by moving/living in North Carolina. Seriously, the way to defeat them is to
vote with de-feet. MOVE to a place where they don't have them--read older neighborhood,
older house. My house is in very fine shape, was built in 1956, has real plaster walls, and is
built MUCH better than these matchbox, cookie-cutter houses built these days. And my city
has no "ordinances", and there are no CCR's that attempt to tell me what I can or cannot have
on my own property--except for a junk car parked in the yard with grass growing up around it!
I LOVE it!

6030. Re: Would Morse Code die without the testing requirement?

Newsgroup: rec.radio.amateur.policy
Date: 2002-02-26 04:52:36 UTC
From: lenover21@aol.com
Message-ID: <20020225235236.27846.00000080@mb-fg.aol.com>
Source record: 35593

In article <20020225133157.10663.00000086@mb-fp.aol.com>, lenover21@aol.com
(Len Over 21) inadvertently sent the wrong message reply, was chided by
outraged and vitriolic thought police (or SA fairies, its hard to tell which)
and
now resends what was originally intended:

>In article <20020224221056.19003.00000087@mb-bd.aol.com>, n2ey@aol.com (N2EY)
writes:
>
>>In article <3c795dc1_2@news7.fast.net>, "Carl R. Stevenson"
>><wa6vse-shack@fast.net> writes:

>>>I wasn't born at the time ... were you? (If you are that much older
>>>than me, were you licensed and on the air at the time?)
>>
>>I didn't come along until years later - but so what? Must one have
>>been alive during the Civil War to be knowledgeable about it, and
>>the factors that influenced the people of the time?

Heh, heh, heh. Morse code was used during the American Civil
War. While the ARRL didn't write it up, an interesting couple of
mentions include suppression of the morse telegraph communications
for tactical communications on the Union side, the reason given in
official histories being that "it was too easily compromised by
interception." The replacement communications was visual, signal
flags by day, torches by night. [interesting "justification" :-)]
The crossed flags and torch are on the collar insignia worn by
US Army Signal Corps to this day.

Hmmm...a morseman born in the mid-1950s who speaks as if he
he was USING morsemodes in 1936, "knew full well the SSB
pioneering by hams" in those days. Whoa! Halt! Let me remind
you of the official orders given out by two Badass Extra Dudes
big Dave and the Goonery Sahgent: "YOU HAVE TO BE _IN_
SOMETHING TO _KNOW_ IT, IF YOU ARE NOT YOU DON'T
KNOW ANYTHING." If you were born 19 years after a date you
cannot possibly know anything about it! Geez, you guys have to
get your acts together.

>>indicates a hatred of the code itself and a big gap in your knowledge of the
>>history of US amateur radio licensing. Remember, we're talking about
>>history here, not the way things are today.

I doubt that. N2EY is practicing a rather laborious SELECTIVE
HISTORY extremely biased in favor of his particular viewpoint.

>>For 1936, was he not correct? At that time, Morse/CW was THE
>>major mode of both the military and commercial services. Yes, there
>>was some voice and some RTTY, but only a small amount compared
>>to Morse/CW.

Insufficient evidence and absolutely NO cites, there, Jimmie, it betrays
a very limited historical reference that is more hysterical and histrionic
than historic. For the commercial and military services try consulting
a few dozen other workd besides what is printed by the Newington
boys. Try the first "Collins SSB Book" (by Pappenfus, Bruene,
Schoenike) as a primer on commercial methods. Did you think that
half of the four voice-grade circuits on each SSB were going to be
used for morse?!?!? For military services try "A History of the U.S.
Signal Corps," by the Editors of The Army Times, Putnam, 1960.
For both and more detail on technological aspects, try the very
special 50th Anniversary edition of Electronics magazine (McGraw
Hill biweekly) of April 17, 1980. You can also visit the IEEE History
Society section and check out their many Milestones (you ARE an
important professional with good school grades have all those
contacts with the industry, right?). You can ask KT4ST to let you
see back copies of SIGNAL from his ability to access US documents
or even visit Fort Gordon's Signal Museum (it has public access
during the day and is not too far from PA). That's just a start, and
you might even try reading Thomas White's many historical
references to ALL of early North American radio before WW2, real
history with references and footnotes even! Interesting stuff to
someone who was born in 1932 and only four years old in 1936.
If you REALLY look hard there's all kinds of intersting stuff about a
really BIG technology field already jumping by 1936.

>>One of the justifications for the very existence of the ARS back in those
>>days was as a training ground for radio operators, and a ready reserve for
>>military and commercial needs.

Oh, wow, snow job and a half. Jimmie, Jimmie, you've failed to make
good grades in very ordinary US national history and its domestic political
climate of 1936. The 48 states were split and favoring ISOLATIONISM
with the edge going to isolation, non-involvement, its far away and don't
bother us kind of thinking, we don't need to prepare for anything. As far
as "WW2" was concerned the only fracas in 1936 was the Japanese
fooling around in far away Manchuria, an Asian thing that didn't involve
the Big USA. Important folks, even Charles Lindberg, thought Germany
was "okay" in 1936. The military draft wouldn't start until 1940, after
the Germans and Italians appeared to be a possible future trouble.

>>Of course the military and commercial services don't
>>need many Morse/CW operators today, but back in 1936 it was a VERY
>>different story! Hams who could not begin to approach commercial or
>>military standards of skill weakened this justification.

You make it sound like US amateur radio was some kind of "military
reserve" when all you are doing is wrapping very new political flags
and bunting over standard boilerplate political statements that were

used for many, many different things.

>>This idea is explained in DeSoto's book. Have you read the whole thing?

Somehow, being exposed to a larger world of radio, I doubt that
Clinton B. DeSoto was NOT the "official historian" of radio OR
anything but a nice little book that told old-timers things that they
WANTED TO HEAR OR SEE.

Have you read ANY of the specific mentions I've cited or ANYTHING
other than ham-interest books? You can't be a "renowned historian"
of ANY radio service by using tunnel vision like they were tunnel diodes.

>>Recall that early in WW1, there was a severe shortage of radio operators.
About
>>4000 US hams (a very large percentage of the US amateur radio population of
>>1917) served Uncle Sam in WW1.

According to DoD information supplied to The World Almanac, some
4,743,826 served all branches of the US military in WW1. That's one
ham for every thousand other beef. According to the Army Times
SigC history the major signal communications modes on land were
field telephones, signal flags and torches (still there since Civil War),
Lucas lamp blinker, and flag panels on the ground for the beginnings
of military aviations. There were many more couriers using foot,
vehicles (bicycle and motorcycle) than there were radio telegraphers.
Only the Lucas lamp was directly allied with on-off codings.

>>With the rise of communism and fascism in
>>Europe, the possibility of another war could not be ignored.

Really? The Hue and Cry and Anti-Communist hysteria had
boiled up in the western public in 1918 or even 1920?!?!? Yes, a
real anxiety period. The US State Department completely dissolved
its "Black Chamber" of cryptographers under the rationale of
"Gentlemen don't read other gentlemen's mail." That left a small
very small group of Army and Navy people to organize their own
(that's another part of history allied with radio, plenty of details)
with the result that the Navy won the race and was installing the
first of the "rotor" on-line encryption teleprinters in 1937. The USN
was already seeing the superiority of TTY over manual telegraphy
for use on cruiser class and heavier in the mid 1930s.

>>Having a large
>>contingent of skilled and technically knowledgeable hams helped justify the
>>continued existence of the ARS.

Or putting in some politically-motivated patriotic bunting on the
reviewing stand is just common, everyday boilerplate political
phrasing.

>>See above. I would respectfully suggest that your conclusions are
>>conjecture based mostly on lack of historical background of the time.

I respecfully suggest you get a far wider research base than paper out of Newington. I respectfully suggest you get in touch with those other Big Badass One-by-Twos in here and get your respective acts together on what is "officially correct." You three are just QRMing yourselves into nonsense.

Jimmie boy, when you were born I was already wearing flags and torches, had three up and one down on the sleeves, working Big Time HF Comm 24/7. My parents struggled through the Great Depression first hand as did the parents of my 378 high school classmates that graduated my 1951 class...I think that my class group as a finer, up-close and personal view of the year 1936 than you will ever have.

Come back when you have your Real time machine finished...

Hardly. Check out the ARRL's Antenna Book in the chapter on Safety, which
describes the effects of an EMP event and the procedures to follow in

>Now, now, big Dave, you DO exaggerate a bit about "importance"
>RELATIVE TO OVER A DOZEN OTHER NATIONS IN MIDDLE
>AFRICA which had or still have a strong communist leaning,
>governments, and staging areas for USSR troops. Bigger countries.

I guess you made this assessment based upon YOUR first hand experiences in
foreign service, Lennie?

You were there? You were briefed by foerign service operative of the time
on daily on-goings there?

>On the world scene of geopolitics, Guinea-Bisseau is
>still a "4th World" country struggling to get up into the "3rd" category.

As a power unto itself, perhaps...Dave's narrative clearly limited itself
to the Soviet and Cuban presence there...Not any "geopolitical" importance.
Most of the former Soviet bloc countries and those who were under it's
influence are STILL in that category today. I dare say that Russia itself is
barely emerging from that level today.

>Gosh, big Dave, no "letters" seem to have been sent to the big
>wire services like AP and Reuters stressing the ENORMOUS
>IMPORTANCE of that particular country and its been a long, long
>time since a video bite from a TV correspondent. I don't see,
>haven't seen much mention in any big historical write-ups either,
>but, of course, you've just cleared this up.

Well DAVE...How DARE you have any insight on something that Rather or
Cronkite didn't dedicate at LEAST 1000 hours to. We ALL know that if Lennie
can't find at least a small novella on it on the web, it DIDN'T happen!

>I've never elevated any STATE DEPARTMENT work or the IMPORTANCE
>of Guinea-Bisseau in communications, or implied Great Secret Mysteries
>of (horrors!) CLASSIFIED COMMUNICATIONS WORK!

Having never been involved in any of them, we'd hope not. Your track
record is already pretty porous.

>Boo on
>me for not bowing and scraping, saluting and kissing the ass of a self-
>professed one-by-two "radio champion."

As oppsed to a "zero by zero" hero like you...?!?!

>What I did originally (and big Dave is still smarting from ego blasting)
>was to bash a snow job to others who had not worked any gubmint
>comm on HF, would therefore be unknowing of what went on.

Jon Lovitz has your "Pathalogical Liars Association" membership card for you, Lennie...Shall I send him your address?

>There's a terrific amount of PUBLIC INFORMATION available to the
>public (that's why it is called "public") on just about EVERY area
>and activity of the entire radio world. That INCLUDES military
>communications, believe it or not. The problem with arrogant
>elitists in a hobby activity is the ONLY radio information input they
>have is from (guess what) their hobby activity's publishing media.

There are reams and reams of information NOT in the public domain, too. If a lot of the realtively low-intensity evolutions that I was involved in are NOT there, I can only imagine what serious things may or may not be out htere in "information land".

Some gall...The world allowing things to happen that didn't "cc" Lennie first......

>For a little while I was an INSIDER
>of a part of that small part of the publishing world. HR didn't live in
>the midst of ancient fantasy and self-promotional propaganda and
>lasted 22 years. Another self-professed ham hero thinks they were
>a "failure" but then he was never any sort of insider in ham publishing.

Didn't have to be...They are not publishing today...It failed.

Congratulations, by the way Lennie, on seeing HR back into "reprint". Must be nice to see all that 20+ year technology back inot print, huh?

>Yes. It is my opinion that amateur radio is an interesting, enjoyable
>recreational activity that allows non-professionals to engage in the
>fascinating technology of radio communications arts within the
>narrow mode selections and frequency bands allocated by federal
>agencies.

"Narrow mode selections"?

The federal government does NOT allocate the modes I must use.

Also, the bands we are authorized to use outnumber the ones YOU are authorized to use 100%, Part 15 and Part 95 notwithstanding.

>It is supposed to be a social gathering point where
>individuals can convene, make friends, share information, socialize
>as other groups do for the sheer enjoyment of socializing.

Oh? And this is codified in which paragraph of Part 97? I musta missed it.

>Shazam, big Dave, you are a marvel. Now go leap tall
>pileups at a single bound. Leap high. Your own pileups
>are very big.

Compared to YOUR posts, Lennie?

Apologies to Dave, but YOU stack it much, MUCH higher!

Mrs A is waiting, Lennie...Run along!

Steve And The Boys

2nd AF was not at Cheyenne Mountain. Try Barksdale AFB Alfa and Bravo
nets.

> Were you a child prodigy and a consultant to Curt Le May?

Did you know Tesla personally?

> Does the Joint Chairman (General Myers) know of your
> importance, etc.?

Retirement galls you, does it? I think I'm handling it pretty well.
Of course I can get on the ham bands. I find that very relaxing. You
should really think about trying it.

> >We did do some work with NASA though. Do you know anything about that

You continue to amuse, Len. I love your, "I haven't seen it so it can't
be true" take on things. What bothers you about someone having done
things you haven't done or can't do?

> Nobody at Huntsville or Michoud or Vandenburg or JPL or Clear
> Lake mentioned your name. ["Houston, you've got a problem!"]
> Never made it to the Cape, though, did you "do work" there?
> In all honesty, some small talk at a restaurant in Santa Maria

> and sound equipment, not space things.

Are you bothering to read my posts? Did you see the discussion of Guinea-Bissau? After all, you are the fellow who'd rather discuss my work there than amateur radio. Maybe we can move this to alt.guinea-bissau.envy.

> Spent a fair amount of time at Santa Su for SSME instrumentation
> on static test stands, lots of hands-on with spacecraft fabrication.
> Did you look cute in clean-room clothing? How did the finger cots
> feel to you?

Ever been to Guinea-Bissau, Leonardo? Think you might like to hit the embassy and let 'em know that you're on to me? You might be able to get me on other work related things that you've never heard of and which therefore can't have taken place. You'd probably love to jump all over my stories of 15-18 hours per day of HF RTTY Freetown-Washington, D.C., six or seven days per week during the Liberian civil war. All coordinated via CW too. Absolutely no RTTY order wire. Can't have happened though. No one from government bothered to clue you in. I operated as 9L1US with over 65,000 QSOs from there. Wanna talk about it? Like to discuss long path 6m openings in the middle of the night from West Africa to Japan or Australia? You probably didn't know of them either.

> >We already knew of the self-glorification and romanticizing. We've seen

> "the 2nd AF commo" wasn't it?

Yeah it was, Len. They have this neat system in place now. Some people
are born *after others* and do their work sometimes decades after others
are sitting the big recliner. The system seems to work pretty well too.
It keeps us all from being grumpy retirees at the same time.

> Oh, yeah, I got a good conduct medal and mentioned that once.
> That must be the "glamorization and romanticizing" you charge. :-)

Excuse me? You laid the charge, Leonard Hermione Anderson. I just
pointed out that you've once again done what you accuse others of doing.

You were the one who desired discussion of my work in Guinea-Bissau,
Len. If you are interested, my name has appeared on Key Officers guides
published by State in the past. You can surely do some research and
find the issues. Have fun.

> Big Dave will be shocked to learn that early Cold War crypto gear

You have to be one of the most biggest fools I've ever encountered.
You have demonstrated your ignorance of what I was doing and how I was
doing it on several occasions. Not many continue to wear their
ignorance like a badge after having been provided with information they
lacked. You're a true gold medalist among repugnant geezers.

> >Take up a hobby--maybe ham radio.
>
> That's a nice suggestion. Thank you.
>

> technology, big Dave, you ought to learn about some of that

> technology. It might help stoke your boast furnace.

Wow all that time and you still haven't managed to come up with a ham ticket despite your professed interest. Writing technical articles for a ham mag isn't quite the same as being a ham is it? There'd be that actually being able to get on the air part among other things.

> >What will we do about the stupid?

> Educate them. There's a great BIG radio world out there! All
> kinds of technologies and advancements in the radio arts. It
> can be scary to the beginner, the boaster, big Dave. To begin,
> get yourself educated. Then you lead the others.

How stupid would a man have to be to put off obtaining an amateur license he professes interest in for *decades*? How stupid would he have to be to remain ignorant of the way others feel about his lengthy, ponficating monologues posted to an amateur radio newsgroup?

> >You've been ignorant before.
>
> Absolutely, big Dave. I'm totally ignorant of what goes on within
> your head to make you act they way you do in this newsgroup.

...and apparently ignorant of what goes on in your own head in motivating your postings here.

> the glory and nobility from being able to affix a radio station
> callsign on my name.

You forget that others in this group have also had professional experience in communications which rival or surpasses your own. I'm one such professional. You've taken it upon yourself to as much as call me a liar in describing conditions of my work. You've attempted to belittle my work after you indicated that you wanted to discuss it. Other communications professionals who post here, unlike you, have other credentials in that they are radio amateurs.
That radio amateurs are proud of their calls, that they have status in amateur radio, that there are different classes of license seem to bother you to no end. You demand to be taken seriously here based only upon your professional past. It isn't something you can demand of radio

amateurs.

> >That would have to make you stupid since you are attempting to

> still a "4th World" country struggling to get up into the "3rd" category.

Look up the years I was in Guinea-Bissau, Len. Your statement is then,
that a country is important only because of what it exports. In that
case, Portugal isn't very important. What will we ever do with all of
that butter, the vinho verde and those mounds of olives? Aside from

that, whoever claimeed great importance for the country. I've already explained to you what was going on in the country and I've explained what the United States embassy was involved in. You clearly decided that no matter what I wrote, you would dismiss it.

Actually, Len, you are quite correct. I took Guinea-Bissau from a position of about 64th most rare country to nearly off the list of needed countries.

> As the ONLY HAM IN THE COUNTRY (out of how many, 1.3 million

> then. Did big Dave act as an "elmer" to Spread The Word of
> Ham Radio there to the population? Dozens, hundreds eagerly
> awaiting The Word, guidance, and leadership? Just curious.

No Len. I didn't pioneer amateur radio in Guinea-Bissau. There was a very active Cuban op in the country a year or so before my arrival and there was an active Ukrainian fellow. Erik SM0AGD has made several trips to the country both pre and post independence and an Italian group operated from the Bijagos Islands shortly after my arrival. There is no organized amateur radio in Guinea-Bissau though there is a fully equipped club station. People would seemingly prefer to eat than become radio amateurs.

> >It is always nice to receive a history lesson from someone on the

> professed one-by-two "radio champion."

It is simply that you've as much as called me a liar for describing what
was used. I've not ascribed any undue importance on my work or upon the
country of Guinea-Bissau. Let me assure that it is not too late for
you. You may kiss my ass any time at all.

> What I did originally (and big Dave is still smarting from ego blasting)

I can assure you that the Department of State does not make public much
of its communications procedures, equipment and the like. Since you
already know of the classified nature of the work, you'd not likely see
anything written up in an industry journal. The fact that you continue
this "snow job" crud in a silly effort to dismiss my statements only
makes you look like an old fool. My work in Guinea-Bissau wasn't the
topic and you've only taken this tack as a diversion.

> The problem with arrogant
> elitists in a hobby activity is the ONLY radio information input they
> have is from (guess what) their hobby activity's publishing media.

Your problem is that you see anyone who won't kow-tow to you as an
arrogant elitist. What ever gave you the idea that hams don't read
material other than ham radio publications? Why, that is simply elitist
and arrogant of you.

> Is that a slam against amateur radio? No. It's a slam against some

> a "failure" but then he was never any sort of insider in ham publishing.

Yeah, that "insider" thing must have set you up as quite the expert there for a while. I've gotten the short notes of acceptance from McMullen followed by checks as I have from CQ in the past. It gave me a warm, fuzzy "insider" kind of a feeling. Give those editors and publishers hell, Len. Oh--the ones you are complaining about--are they the ones who didn't accept your stuff for publication?

> You continually ATTACK on the specious claim of "ignorance of not

> and terrain. Within that real boundary there is NOTHING "secret"
> except for curious mindsets who think that all must think as they do
> or be considered "inferior" or "unworthy."

Right, Len. Ham radio is an avocation which can be enjoyed by anyone: old folks, children, bakers, gas station attendants, farmers, bankers,etc. In short, it can be enjoyed, apparently, by just about anyone but you.

That's just a bunch of hooey grown in the fertile muck of your mind. Large numbers of radio amateurs give of their time and talents in

traffic handling and emergency preparedness work. You are you to pooh-pooh their efforts?

> The appearance of so many self-styled supermen is not

One thing to consider - you kinda have to know what you are doing to make these things work - and if someone who is unlicensed knows I think they would also know how to get this equipment elsewhere to do illegal things.

I mean most linear amplifiers are not sold with their 10 meter modes unless you are a licensed operator - but you hear cb users using them all the time anyhow.

Same with modified 10 meter equipment and general coverage transimitters.

Two problems (at least) with that idea. First, why should we think that permitting 15 minutes a week of broadcasting would satisfy K1MAN? I have followed his "career" for awhile, and heard him on the air enough to know that here is a person who likes to break rules for the sake of it. He would simply exceed the limit, and would make sure that everyone knew he was doing so.

The second problem is that if 15 minutes of broadcasting per week were allowed, the ham bands would be nothing but wall-to-wall with these transmissions. Assuming that only a quite conservative 1% of US licensed hams took advantage of such a privilege, that would mean about 7000 broadcasts per week, or about a thousand a day, or more than 40 per hour! Even if no hams outside the US did this, can you even begin to imagine the QRM? The bands would become completely unusable, all the time.

No, the solution to the K1MAN issue is to allow the FCC to do its job and either pressure him to cease broadcasting (as well as jamming, making unidentified transmissions, and verbally harassing other stations on the air), or to NAL him till he bleeds, and revoke his amateur licenses, and in the not entirely unlikely event that he continues even then, they ought to confiscate his ham rigs, amps, tuners, antennas, etc., over and over if necessary. It may take awhile, and he may be on the air for months to come, but its important not to respond to guys like this, that only encourages them. Eventually the FCC Compliance Office will put a stop to this. We've all seen them shut big nuisances like this down many times before, even if it takes longer than we would like. I have personally physically stood by and watched, with some satisfaction, the FCC and NYC police confiscate the entire stations of two "freebander"/CBers who were running close to 5KW AM into directional antennas and stomping all over 11 and 10 meters in much of downtown Brooklyn, as well as overloading TVs and getting into telephones for 3 or 4 blocks. This was in the early 80's, and of course the FCC slacked off mightily in the years after that and only in the past three years or so has it been getting back on track with reasonably vigorous amateur enforcement. Still, the law and the ham community are stacked heavily against K1MAN, whatever his claims to the contrary may be.

A much more accurate statement than "the US government is making laws that prohibit me from listening to Radio Moscow." I will let Phil address the "free to do so until" aspect of this. There are many things you are "free to do" until you get sued.

> Of course, The ARRL can go ahead with their attempt for special legislation
>for ham only antennas, but it will not have any results. Go for a one
>antenna of a certain type for any use and that would have a better result.

The FCC has already said that it will not pre-empt ham antennas. To extend that request to include ham antennas, but antennas of all types, is, IMHO, even less likely to get FCC approval. Why would they? Now, if you want to include it to include receive-only antennas of all types, you might have a slim chance, but ARRL will not have a dog in that fight.

>The congress and associations know that if there is a ham radio exemption
>allowed their is going to be a ham that will insist on a 75 foot tower
>and will fight it out in the courts.

The present pre-emption does not pre-empt a 75-foot tower for an OTARD device. ARRL has asked that ham antennas similar in size to the pre-empted OTARD antennas also be pre-empted. If you are seeking a 75-foot tower pre-emption, I don't believe you will be successful.

Have you filed your court case yet? In what jurisdiction?

Well, in a word, yes. The FCC has notified manufacturers, importers, distributors, and major retailers that importation or sale, retail or wholesale, of so-called "10-meter export radios" will be banned as of 12/31/02 (the FCC keeps changing everything around on their website, so the URL I have for the pages that describe this action, as well as the very exact criteria they will use for determining what is designated a "10-meter export radio," but a search of that phrase and perhaps the words 'enforcment, ban, and/or sales.' should yield it up. This action doesn't stop RS selling its 10M rig, or unlicensed buyers from picking up a used HF ham rig, but a whole host of Rangers, Galaxys, and the like, the preferred radios of freebanders and over-power CB ops, are out. Next year those rigs become contraband, and as such the Customs Service gets into the act. The FCC may not exactly make truckstop CB shop owners quake in their boots, but Customs just might, and if not they should get the message after the first pallet of NIB radios is confiscated. Ouch, that's expensive! Illegal operators may keep right on, but nobody in business is going to ignore their bottom line so much they run themselves out of business, not at least for the sake of being willful. My brother helped gather the evidence the FCC needed to confront a Manhattan taxicab company in order to get them off the bottom of 10M. They were using Ranger 2950s and HTX-???s to dispatch cabs, and denied it. My bro and some other hams DFed these guys, tooks photos of cabbies using the radios, even "TX-fingerprinted" a few of them. They gave all this to the FCC, which used it to get the equivalent of a search warrant from an administrative law judge, and faced with the indisputable facts the cab company agreed to cease using 10M with 72 hours, rather than be fined many thousands and have the gear confiscated on the spot.

Likewise the FCC has contacted dealers and manufacturers of "10/12M" amplifiers and amp kits. Not that they ever were legal, but the FCC has given those in the trade notice they intend to enforce the existing law. They certainly didn't have to do this. They could have just set a date, waited, and swooped in and confiscated thousands of amps out of warehouses and stores. But they had the courtesy to give notice, and anyone in business stubborn enough to flout a good law of long standing that rests on solid legal ground ought to go out of business.

Not that any of this is going to eliminate every last caterwauling CBer with an amp so big it sets off the cardiac alarms at hospitals inside a 20-mile radius, or every "freebander" crawling and splattering all over the bottom 300 KHz of 10M, but it *will* clear up a lot of QRM. Locality by locality, neighborhood by neighborhood, it has cleared up much QRM since the whole freeband/linear CB thing got started in earnest in the 70s. Just now, things are focussing a bit more on the source and supply. There will still be unlicensed people with a dirty KW all over 26-32 MHz, but fewer off them, and maybe the added effort and

expense of buying cleaner (than most CB/freeband) ham gear and building amps at least will mean that some bozo who means to transmit on Channel 40 doesn't splatter so much he is S-7 on 28400!

International Morse could be sent the same way landline telegraphy was sent and decoded. click-click is a dit and click-space-click is a dah. I am not sure I could send that way.

Maybe Dick is suggesting that the receiving test be done with all clicks. I AM sure I couldn't receive that way, so the test would have kept me out of ham radio. :-)

And, if I were tapped in the collapsed building and wanted to bang on pipes to give me something to do until the end, I would probably bang out 2, 3, 5, 7, 11, a sequence that would clearly say that there is a human down here.

If your concern is EMP, before mandating knowledge of Morse code, another mandate would have to require that a ham maintain a station that is going to continue to function after that large EMP event. If your justification for the continuation of the Morse test is that there may be an EMP event, it probably won't hold up with the Commission.

To date, the FCC has not seen a need to retest for amateur or commercial
licenses. Do you believe there is a new problem that retesting will solve?

Yup. In fact, as I recall, the FCC allowed hams who let their licenses expire during WW2 renew them without retesting. (I oughta go look that up to be absolutely sure).

> Do you believe there is a new problem that retesting will solve?

Nope. Not me. Carl and others think lots of us tested-long-ago hams couldn't pass the current tests without lots of study and review.. I'm simply saying, as

clearly as possible, that THIS tested-long-ago ham has always maintained his skills and knowledge at least at the level of being able to pass the current exams.

The FCC's decision on this type of radio has a lot to with how easily modified they are. If it involves removing a jumper and powering the radio up again to get "export" coverage, the FCC considers that the radio is capable of out-of-band operation and thus would have to be Certificate before being offered for sale in the US.

Amateur transmitters, with the exception of power amplifiers, do not have to be Certificated before being marketed, so the ham-band-only rig that can only be modified by actual hardware changes is in no danger of FCC enforcement, IMHO.

Before ARRL reviewed the Ranger Communications RCI-2970DX, we determined that the DX version of this could not be modified easily. We found plenty of "mods" info on the non-DX version, but when we tried the mods on the 'DX, they didn't work. No amount of fiddling with jumpers resulted in a useable out-of-band mod.

It certainly was not bullstuff during the years when Morse code was considered current commercial radio technology. In that era, the Morse code test served a valuable function, helping to self-train Morse operators for use in commercial and military radio communications. That was, IMHO, the reason that the FCC initiated and maintained the Morse test.

> than we'd like, we want to keep newcomers out."]

Nope. More like "we are having enormous turnover, the newcomers
aren't staying, and the FCC is getting ticked about hams' straying
outside the bands, putting bum signals on the air and being only
marginally skilled".
>>

Those who have the qualifications vs. those who don't. Is that
not a fair system?

>the same sort
>of "not in my sandbox" attitude that prompts so many
>PCTAs to insist the such a ridiculous artificial barrier
>to entry into the HF bands "must be maintained."

Nope. Can you cite anything more recent than 1936 that talks
about it being necessary to control or limit the number of hams or
the growth of ham radio? I know of nothing in that vein from any credible
source, pro- or anti-code test.

You're actually missing the best argument by focusing on the wrong things,
Carl. The FCC thought 13 wpm was a good idea in 1936 - that's obvious. The
point to argue is that this isn't 1936, and while code skill is a good thing to
have, it's not the same necessity as in 1936.

>> > DeSoto goes on:

>(newcomers) and remaining largely stagnant, while acting in the
>role of the (self-proclaimed) elite ...

Nope. QST was FULL of articles on better equipment, better methods
and techniques. Use of 5, 2-1/2 and even 1-1/4 meters was described
and encouraged. Crystal and ECO transmitters, single-signal
receivers, all sorts of stuff. Same thing in the Handbooks of the era.
Not just ARRL publications, either.

Trouble was, the stuff was expensive unless you were one of the "haves",
moneywise. Would you rather have ham radio be limited to those
with lots of disposable income?

>> >also, even if it

How much of that have YOU been doing, on the ham bands, as
an amateur? I read a lot of preaching about what you think hams should do,
but not what you are doing as a ham in that regard.
>

Do you know how much that technology cost, adjusted for
inflation? Sounds like you want ham radio to be the
sole property of those who can afford the latest technology.

> Limiting
>the population as an alternative to actually fixing the problem

WHY? First you say that use of the other bands should be
encouraged, then when the FCC actually does so, you say
it's all about HF. Huh?

The FCC also (re)created the Extra back in 1951, and RAISED
the requirements for full privileges to 20 wpm and the Extra written.
But they changed their mind at the last minute and LOWERED the
requirements to General class getting all privs. Funny you don't
mention that.

Yes, it does. "Beep" sure isn;t meant as praise. And
nobody who knows much about Morse considers 13 per
"real fast".

>it
>indicates disgust with the way in which self-appointed
>elitists, whose elitism was based in many cases purely

Who decides what makes a person "perfectly qualified"? The
FCC. They were convinced that 13 and later 20 wpm were required
to be "perfectly qualified".

I would not say they are greater, but not a lot greater. The privileges granted are a lot greater.

>The requirements today to obtain all amateur priveleges
>require the studying of a lot more than a 16-page study guide.

The same is true of the requirements of 1970, when I got full privileges back.

>I would not say they are greater, but not a lot greater. The privileges
>granted are a lot greater.

Yes, indeed, the priveleges are a lot greater. (Especially with priveleges
including the right to a permanent license.)

But I would say that an exam that required that a 13-year old read a 4-page
study guide vis a vis an exam whose question pool takes up about 80 pages is a
"lot greater" requirement.

Although one could offer that there are reasons that the requirements need to
be greater, going from an exam that requires studying a 4-page study guide to
one that requires a >100 page study guide is not "dumbing down" Amateur Radio.

>Hmmmm - so you're saying that having greater requirements has not hurt
>growth?

I have never said that is has; to the contrary, I have noted that the Amateur
Radio Service has continued to grow during all the time that some claim it has
been "in the tubes."

I have offered that a major reason that the growth does not come from 13-year
old hams is that the entrance requirements are much higher than this 13-year
old kid would have done. The level of difficulty does not seem to be too high
for adults, as can be evidenced by the growth of Amateur Radio.

Well this pretty much answers my question about your ever growing up.
I say something you don't like and you feel obligated to accuse the
thousands of scientists, engineers and technicians who have kept
this nation free for the past 60 years of treason. The folks up here
put an end to the Second World War and won the Cold War what
have you done to compare to that Ms. Robeson.

I find it very hard to believe you were ever a Marine all of the
Marines I have ever worked with have had a deep sense of
honor, you sir seem completely devoid of honor. I suppose
there could be Marines without honor I just never have met one.

6073. Re: K1MAN gets another letter

Newsgroup: rec.radio.amateur.policy
Date: 2002-02-26 15:16:01 UTC
From: Clay N4AOX <wyn@worldnet.att.net>
Message-ID: <3C7BA6A3.D5CD765D@worldnet.att.net>
Source record: 35534

Hi Will,
The only reason that K1MAN gets by with his operations is
that W1AW, the ARRL Newington broadcast station, does
essentially the same thing. But, I suspect this will not
last much longer.

Using the ARRL Newington crowd logic recently used to
eliminate printing "moved and seconded" , a recent survey
would show that only 10% of the US ARS licensees regularly
copy W1AW. Therefore, the continuation of the expensive
operation of W1AW (not a moneymaker for Newington) would not
be justified. FCC defense of continued W1AW operation is
probably wavering in view of the justification being used to
permit operation of K1MAN and others broadcasting in the
ARS.

If W1AW voluntarily goes away then the FCC can proceed full
steam to shut down K1MAN without fear of ancillary damage.
The ARRL can use the transmit power savings, building
upkeep, utilities, sell off of equipment, insurance premium
savings, sale of property, [W1AW control operator salary
savings ;-)] etc. to increase the Newington crowd managers'
salaries even more, maybe even be able to hire Carl
Stevenson. It is a win-win.

The EMP event I mentioned is what is known as an "example."

Your twisting of the argument from the usefulness of CW during
emergencies to mandatory code testing is a wee bit perplexing. Do you
have an agenda or something?

You left yourself open to it, Gerry. Sorry. You took the first shot.
Just like Lennie the Limp, you think you can toss about insults and
humiliations and not be on the receiving end.

As for ending the cold war, Sir, THAT was done on the backs of hundreds of
thousands of Soldiers, Sailors, Airmen and Marines.

The "stuff" provided at Los Al was just ONE of the tools that that was
accomplished with. Unfortunately it was also one of the tools that STARTED the
Cold War, so don't even go there.

The Soviet block was beaten back as much by the sheer will of the western
nations to see it destroyed as much as anything.

>I find it very hard to believe you were ever a Marine all of the

>truth.

Methinks you are the one with an honesty proplem, Gerry. Tried the same
thing, and to be relatively thorough, went several pages of "next search".
Nothing on RRAP came up until well over 50 items, and it was not me that was

involved in the thread.

But I will simply accept it as your "newsreader"...methinks you set a bit narrower parameter than just "amateur radio".

>Are you referring to yourself in the above. You seem to be the only
>one
>spewing bile filth and slander which interestingly enough was not even
>directed at me but rather at a large group of very loyal American.
>Those folks unlike you Ms. Robeson actually do something.

Gerry, is there a good reason why (a) you decry my posts yet have started an entirely new thread doing the exact smae thing, and (b) use "Ms" instead of my given name? THAT is a Lennie-tactic.

As for who the insults may have been directed at, you seem to have a bit of the same problem, making accusations about "honor" of Marines. You know nothing of which YOU speak, Sir.

>I'll have to leave dealing with you to others as sinking toward your
>level is making me quite uncomfortable.

I find that very humorous, Gerry. You initiate an exchange in a PUBLIC forum decrying the need for a PRIVATE exchange...begin the use of demeaning "titles" ala Lennie, then suggest that you are somehow sinking.

Had you been a man who does what he says and vice versa, you would have made those first comments in e mail. You didn't, which leads me to believe this was nothing more than a chest-beating exercise on your part to gain some imaginary foothold on the RRAP pecking order. Lennie calls them "messaging points". Well, I guess you scored your first ones. Ask Lennie for his address so he can mail you your certificate.

I would have repsected some well considered words in a private e mail...Instead you came out swinging in here.

You already sank, Gerry. That sound you hear is you desperately trying to find something to hold on to.

Have a nice day.

Well if this were the case, them my friend who bought me my X-mas gift while I was volunteering with the Red Cross in NYC from October 3rd to December 26th would have been illegal, he knew of my desire, and plan to get my license, which I have got now, the license arrived in the mail yesterday.

I think that being able to buy them w/o a license is ok. What I think is that they should crack down on the "export" radios, and the selling of radios that can easilly be modified to work out of band i.e. the freebanders moding them to work 11m.

I have also seen and heard from being a shortwave listener for years, that the ham bands in some areas are as bad as 11m. Why not start by cleaning up our own bands before screaming and shouting at those who desire to join the amateur radio community. I have met both IRL, and online, some really great hams, I have also encountered real a$$holes, I do not let the jerks turn me away. I am currently learning the code, and studying for my general, I'd love to play with QRP, as well as PSK-31. I am also interested in setting up an IRLP node on one of my linux boxes.

It's no troll, Dick. 99.9+% of people don't know International Morse code.
The chances that there will ever be a time when the trapped and rescuer
both know railroad Morse code is infinitesimal. What do you propose to
do with the trapped people who don't know Morse code?

Retailers should NOT be required to verify if someone has a valid amateur radio license. Considering how the law would hinder or eliminate the following:
-The ham who just passes the exam and wants to buy a radio-he can't

-The pre-ham that wants to buy a radio before he takes the test so he can listen to it and understand the rules of operation better.

-Sales at ham radio swapmeets. With guns, the right to buy them at a swapmeet has almost been eliminated.

-Gift purchase - What if your wife, etc, who is not a ham, wants to buy you a radio as a gift. With guns, this is illegal.

-Transfer/sale of radios - Is it going to be like guns sales? You must wait until they verify that your license is valid, and pay a processing fee, before you can buy a radio from a friend.

-What if you modify a amateur radio-will you be able to sell it? If you have a radio that can transmit out-of-band, will it be treated like an "assault rifle".

Having all these restrictions and government control on amateur radio sales would damage the hobby that is supposed to encourage good will. It's just a radio.

Out here in CA we have one repeater that people will occasionally get on and jam. We have several "Doppler teams" that chase these idiots down and post their pictures on a website. The Doppler teams are policing the frequency, just like hams are supposed to do.

And that use of Morse persisted far beyond the time when later technologies were available to supersede it. As an example radiotelegraphy was in nationwide use as a means of handling interstate police message traffic well into the second half of the twentieth century. The last vestiges of that net were deactivated in 1972. When I hired on to a state public safety communications position in early 1965 I was tested for Morse code proficiency, since the radiotelegraph equipment was still

in place as a backup system although a Model 28ASR whirling teletype system had just been installed for in-state traffic handling and the radiotelegraph station then handled only interstate relays. And in 1975 I was a part of the technical crew that removed all the radiotelegraph gear from the state HQ station. That gear was very impressive, and I wish I had the foresight to take some photos. The station consisted of two large Wilcox transmitters running 450TH tubes in the final and several Hammarlund receivers with dipole antennas on several frequencies. I suspect that my exposure to this system has something to do with my firm insistence that CW in ham radio isn't just some fad mode, rather is very capable of serious work when capable operators are available. It served very well for a LONG time.

There is one particular non-ham reader who posts here who refuses to believe that there actually was a police radiotelegraph net at work so recently. Of course he has no idea what he's talking about, but instead insists that anyone who says it's so is wrong. Poor fella. If people would stop giving him the attention he craves he'd go away, as he did before some ham posters started answering him again.

I looked them over pretty close, though that was 25 years ago. I found them to be not nearly as exact as the advertising suggested, and in some ways they were more of a study guide than the current question pools. He wasn't able to get exact questions and answers on a large percentage of the questions, and often what was given was keywords to watch for in answers to certain questions in certain subject areas and in some cases not much information at all was available. He did continuously keep working to improve their accuracy, I understand.

That's the best reason for retaining a Novice class. Tech is no substitute. Makes
one
wonder about the mindset at FCC. You wonder if the decision maker there has a clue
or if he's just taking the easy route. There needs to be an easy entry point, with

a serious technical level (for hams, not engineers) within the hobby, what the
restructuring did was move it all closer together, toward a single license. That's

effectively what we have now, when one can grab off an Extra with very little
knowledge and NO experience.
Clearly FCC really doesn't care what happens to the ARS.

Outside of Math, virtually all testing is reading and vocabulary far more than anything else. To go back when dinosaurs roamed the Earth in 1956 I was a snot-nosed freshman who enrolled in a general sci class to pad the schedule taught by the department head who had been in charge of testing at Lackland in WW2.

The senior physics book at the time was Modern Physics by Dull, Brooks, and Metcalf. It was modern in that it had acetate overlays of a steam shovel. As was usually the case, the publishers hired English and Education majors to revise good-selling texts so Charles Dull was the only scientist among the group and he died in 1917. Such was the state of American science education when Sputnik went up and this was a well-rated high school.

So I got to be a tackling dummy in our dephead's efforts and part of it was to take great piles of standardized tests in subjects in which I had no background mostly to show how little they meant. That is when I was not being a blocking dummy as nose moose on a team that included Gale Sayers whom I will tell you now was not the hardest tackle in that backfield. I got 92 percentiles in subjects like Biology that I despised at the time. It worked, he got the PSSC science curriculum installed and I became a professional test taker.

Some are indeed better than others but they are largely a matter of vocabulary and definition -- the latter being simply some realization of why the word was coined.

In traffic control, which when you think about it is the FCCs biz, there are the famous 3 Es, Engineering, Education, and Enforcement. Charlie has done a crappy job of the latter but by and large in the Amateur Service at least, decent Engineering and actually almost outstanding Education. Given that we are in the self-education biz the major function of the testing program is to lead the rookie in righteous paths and this the present structure does fairly well and in fact always did.

I am much more interested in maintaining the integrity of the system and the removal of pressure on the newbie that he doesn't impose on himself than I am on the difficulty level of the exams. By getting the words and ideas out there, the biggest piece of the job is done. It took a while for some of the concepts to sink in to the point of doing a lot about them: why the plus went to the rectifier cathode took a while to sink in.

The object is not exclusion but education. Removal of the Morse requirement is a sea change not because of the mode but because it is the only part of the exams that requires the testee to actually DO a damned thing and for that reason alone will harm or at least change the Amateur Service. I suspect it will have the effect of making it far more a talking shop than a think tank where fuzz like 'legacy modes' gets kicked around like it really meant something.

Dick, NBK

Ooooookay. I'm not thinking that there are no CW operators at Field Days.
What I said was, "as far as you know". I presume that it's an accurate
statement. I'm not wrong about that, am I? :-)

By "DO", I assume you mean to expend some effort. Sorry to disappoint you,
but my learning of Morse code was effortless. It took a lot more effort to
learn to understand and use the Smith Chart. Do you understand and use the
Smith Chart? My understanding of the Smith Chart is much more valuable to
me as an HF ham than my Morse code skill.

I said "I'd be willing to bet ..." to me that implies that
it's opinion/conjecture/speculation.

> I know for a fact, Carl, that you could not pass the tests I took
> for General, Advanced and Extra.

You mean because those exact tests aren't offered any
more? Let's not play word games ...

If you're talking just about the high speed Morse test,
ask me if I care ...

> But I can pass the tests you took for Extra.

Jim ... I really don't doubt that YOU could ... however,
I would still bet, if it were feasible to arrange a broad
enough test case, that a disturbingly low percentage
of hams licensed (what did I say .. 20 years ago?)
could not pass today's G+E test without study and
practice.

Ed,

I'd *personally* (not as an NCI position) agree with Jim. I'd
have no problem with periodic (say every 10 years at renewal)
retesting .. I have every intention of staying current technically
and don't view my new Extra class license as some sort of
"graduation certificate."

I don't think there's a "new" problem ... I think the problem has
been ignored for many years.

The "problem that retesting would solve" IMHO (again personal,
not an NCI position) is that I believe that far too many long-term
hams in our ranks have NOT kept ANYWHERE NEAR CURRENT
with respect to today's technology. Periodic retesting would ensure
that hams stay at least *reasonably* current technically.

Note, that I am NOT suggesting any sort of "bleeding edge"
requirement like, "Design, simulate, and code in VHDL, a
1-bit precision FSK modem with performance within 1.5 dB
or better of theoretical ideal." or "Specify a forward error
correction coding scheme that will provide __ dB of coding
gain in an additive white Gaussian noise environment." ... just
reasonably current BASIC things that the average ham should
know. The sort of stuff that you should be able to read about

in QST, on the ARRL web site, and hear about at local club
meetings ... not "rocket science."

Note that some percentage of hams ... myself included ...
ARE capable of doing the first two examples ... but that
does NOT mean that I believe that ALL should be able to.
On the other hand, I think it's sad that so many long-time
hams are essentially clueless about anything newer than
a 6146.

Ed ...

I did NOT say that a Morse proficency requirement was NEVER
a valid requirement.

I did NOT say that the Morse test was never current commercial
technology.

I did NOT say that the Morse test never served a useful purpose.

I did NOT say that the Morse test was always BS.

What I *did* say was that "the elitist attitude that Morse skill
is the penultimate skill/knowledge factor that defines the
total worth of an amateur" was BS ...

I don't believe that, even in the days when I acknowledge
that a Morse proficiency requirement *was* a valid, reasonable
requirement, "Morse skill was the penultimate skill/knowledge
factor that defined the total worth of an amateur."
(And I doubt that you *really* believe that it was either ... there's
ALWAYS been more to being a ham than Morse skill, right?)

>>granted are a lot greater.
>
>Yes, indeed, the priveleges are a lot greater. (Especially with priveleges
>including the right to a permanent license.)

Let's see:

- permanent/renewable license vs. 1 year one-time license
- 1500 W peak output above 50 MHz vs. 75 W input
- All authorized modes and frequencies above 50 MHz vs. 145-147 CW, MCW and AM only
- All forms of authorized frequency control vs. crystal control only

Add the 5 wpm code test and get:
- 250 W peak output vs. 75 W input below 30 MHz
- CW and SSB on a piece of 10 M plus slices of 80/40/15 vs CW only on 80/40/15
- Vanity calls including 1X3 vs. sequentially issued calls that specifically point
out newcomer status

>But I would say that an exam that required that a 13-year old read a 4-page
>study guide vis a vis an exam whose question pool takes up about 80 pages is

>"lot greater" requirement.

Ed, is reading the 4 page study guide the ONLY thing you did to prepare for the Novice exam? Did you never read any other radio or electronic books, magazines or articles? No Elmer, no QST, no Handbook, no library books? No other source of radio information other than the 4 page study guide in the LM?

>Although one could offer that there are reasons that the requirements need to
>be greater, going from an exam that requires studying a 4-page study guide to
>one that requires a >100 page study guide is not "dumbing down" Amateur
>Radio.

I would say that a lot depends on the content of the pages. How big was "How To Become A Radio Amateur" in 1963? How about "ABC's OF Ham Radio"

or "So You Want To Be A Ham?" (just so we don't focus exclusively on ARRL books of that era). Or the Ameco Study Guide?

That's you. This 13 year old ham was probably dumber, because he needed to read a lot more than 4 pages to get started.

>The level of difficulty does not seem to be too
>high
>for adults, as can be evidenced by the growth of Amateur Radio.

One word: computers.

So you still feel inferior because you couldn't do it then. You
weren't
required to do it then, just as they aren't required to do it now. Of
course
you had to forfeit the license, they don't. The Way it Works. Too bad
for
your Bile-Agenda.

Agreed ... but the letter says that it was "many times more
difficult to secure an amateur operator's license than it was
ten years ago." That, in the words of a highly-placed ARRL
official of that time certainly would seem to imply a pretty
rigorous improvement had ALREADY been made ...

> >SORRY ... the letter SPECIFICALLY states (read the quotes
> >again) that:
> >1) "the total number of amateurs will doubtless be controlled
> > in the future" [this is population control, not growth
control]
>
> Controlled by whom? The FCC, of course. Not the ARRL.

The idea was CLEARLY to use Morse as a filter to control
the total population ... sorry, you can't put any other "spin"
on it ... it's worded QUITE CLEARLY.

> >2) "The total number of licensed amateur operators has remained
> > relatively constant during the past two years." [this
indicates
> > no problem with growth, but with a desire to control the
TOTAL
> > size of the population ... sort of "So 'our' (those of us who

>
> Nope. More like "we are having enormous turnover, the newcomers
> aren't staying, and the FCC is getting ticked about hams' straying
> outside the bands, putting bum signals on the air and being only
> marginally skilled".

So you're saying that the ARRL, recognizing an "enormous turnover"
(which is mentioned NOWHERE in the letter, but would imply a large
loss in numbers, absent replacments), wanted to make the test so
difficult that newcomers couldn't pass the test??? Wouldn't
that have DECIMATED the amateur population, rather than simply
"controlled" it??? (Now wouldn't THAT have been "nice" for
"the elite"???)

> >I am trusting that the ARRL published an accurate account
> >of their request to, and the response from, the FCC.

No, those who already had licenses, granted under an
easier regieme, vs. those who would have to pass the
harder tests designed to keep them out ("control the
population") ... tests recommended by the incumbent
"haves" ... yea, that sounds REAL fair ... like the fox
guarding the henhouse.

> >the same sort

> the growth of ham radio? I know of nothing in that vein from any
credible
> source, pro- or anti-code test.

Read r.r.a.p ... you'll find virtually countless passages from PCTAs
about how "code tests are what keeps 'the lids' out." (where 'lids'
are clearly "anyone who isn't interested in becoming real good at
Morse" ...)

> You're actually missing the best argument by focusing on the wrong
things,
> Carl. The FCC thought 13 wpm was a good idea in 1936 - that's
obvious. The
> point to argue is that this isn't 1936, and while code skill is a
good thing to
> have, it's not the same necessity as in 1936.

I don't see code skill as being necessary at all today. I won't
disagree that it may have been in 1936 ... but making the
test arbitrarily harder "just to keep people out" was, IMHO,
a very BAD public policy decision.

> >Yet, it was "many times more difficult to secure an amateur
operator's
> >license than it was ten years ago." So, again, it seems that the
> >"haves"
> >simply wanted to keep the "have-nots" out of "their (the haves')
> >sandbox."
>
> Nope. They wanted to be sure that everyone had the necessary
qualifications.

Yet the problems you allege were technical in nature .... how did
an artificial code barrier "solve" that problem? ... we all know that
there are people who can do Morse real fast who are technical
idiots ...

> >> The problem was that getting a license was so easy that huge
> >> numbers of newcomers were raising havoc - on the bands
> >> and with other services.
> >
> >Yet, it was "many times more difficult to secure an amateur

buy
> >that this was a "benevolant move for the benefit of all."
>
> I don't think you would ever accept any argument for code testing of
any kind
> at any time in history.

Surprise ... I would acknowledge that a Morse test was almost
certainly a reasonable and valid requirement in 1936 ... what
I OBJECT to is the idea of using silly, arbitrary Morse requirements
as a "filter" solely to "control the population."

[snipped the rest, just because the XYL says it's dinner time ...]

Dan, as we can see, someone already got their panties in a knot. The real problem (at least as I see it) is that years ago (I don't want to reveal my age, but I was first licensed in 1962), transmitters and receivers were often two seperate entities. Today, most rigs are transceivers - whether VHF/UFH HTs, mobile rigs, or HF rigs. Personally, I can't see spending $300 or so for a receiver, only to have to shell out 800 plus for a transceiver when I get my ticket. The answer lies in funding for the FCC. I doubt many (at least here, in Rochester, NY) get away with using HTs for very long. I can fire up a repeater and give the control op a shout and invariably he answers. The repeaters are watched, and it isn't difficult to spot someone who doesn't know what is happening (even assuming they know how to set the sub-audible tones). I worry more about the manufacturers who make the 'export' radios that can cover amateur bands and make them available to anyone. If memory serves me correctly, Radio Shack discontinued their original 10 meter rig as it was too easy to modify for 11. There may be a few problems, but let's not throw the baby out with the bath water. You have a valid point, but I would not try and attack every manufacturer - and certainly, I am not opposed to those who buy a rig to listen and learn (again, buying a receiver followed by a bigger purchase might be a bit much for some folks).

So who's gloating? You're almost a Greek tragedy. Anyone who thinks that Morse skill was ever considered to be the
" penultimate skill/knowledge factor that defines the
total worth of an amateur" is somewhat psycho. YOU never believed that, did you??? Morse is nothing more or less than a skill that gives a more universal
capability to a ham radio operator's toolbox. Got it?

WRONG,WRONG,WRONG!!!.Your "clearly" is clearly fogged in, with zero visibility. One of the factors proven by passing a code test, besides the skill
to communicate using radio's most basic mode, is that one is dedicated to investing whatever it takes into his ham radio license. LIDS who are eager to invest this energy and dedicate the time and -yes- WORK that learning and developing Morse skill requires of most people are rare, though not
totally absent. I know, and have long known, quite a number of good hams, non-
lids, who do not operate CW and have not done so since licensing. I don't consider them lids, in fact quite the contrary.

Your misperceptions are legendary.

>

The ONLY factor separating your "haves" and the "have nots" was
and is a code test which the applicant was required to copy only 20%
of what was sent. What a vast demarcation line! You
state it as though it was the difference between royalty and being a
pauper!
Did you *really* find it so difficult to learn the code to 13wpm?

Sure, the military trained them by the thousands, and many later became
hams,
who were not technically trained individuals and so, on their own, learned
only
enough to get the license and then to get along as practicing hams, many
at the
General class since they lacked advanced technical skills.. Just like you
didn't learn
Morse code adequately, so had to .... you know.

In the first place, I see no reference to "investing whatever it takes" in any FCC regulation.

In the second place, if a Morse code test really served that sort of purpose, we could administer it to potential judges, Senators, school teachers and a whole slew of other so they can "prove their worth."

It is interesting you feel that memorizing over a thousand questions in trivial, but memorizing 26 letters, 10 number, 4 punctuation signs and a few prosigns is "proving that one is dedicated."

Well, seeing as Al and I talk about a lot of the things that go on the page, I usually remember that something might be there.

I would say that most of the more definative QST technical articles that have been done over the past 10 years are available for download from the ARRL TIS pages. Some are members only, but all pages have some articles in the "public" site and those that Al and I felt are related to safety, or helping new hams get started in ham radio are also not in the members-only area.

> Retailers should NOT be required to verify if someone has a valid amateur
>radio license.

I see a number of downsides to this. In the first place, the 10-meter only rigs are really not very attractive to the lawbreakers. The "freeband" rulebreakers seem to want rigs that go from 24 to 32 MHz or so. The FCC already has a list of those rigs that are "10-meter" rigs, but whose design obviously and deliberately included an easy way to get them to transmit out of band (ie, take the jumper plug out of the microphone bag and install it).

The dealers selling these rigs already are breaking the laws against selling or marketing non-Certificated radios, so making a law requiring them to ask for a license at the time of sale would probably not stop that already illegal sale.

And, frankly, if the "show your license" approach were in effect, some of these rulebreakers would get ham licenses for that very purpose. Although they would be legal in their operation on 10 meters, I have to suspect that many of those who deliberately flout the law by "freebanding" would be the law-abiding 10-meter ops that we would all like to see in our ranks.

Studying the 3 page study guide in 1951 was the only thing I did to prepare for
the Novice exam. I didn't have access to any other radio or electronic books,
magazines or articles. The local TV repairman was a ham who told me how to
order the LM, but he was too busy with his business to assist any more.
I had no other source of radio information other than the 3 page study guide
in the LM.

Actually, the ARRL will have a dog in that fight but one of
different spots. Segregating out "receiving antennas of all types"
is opening thr door to an inference that there is something
evil/wrong/unpleasant about transmitting antennas, ham antennas in
particular, and will result in that Catch-22 of an antenna that is
pre-empted for reception but not for transmission.

We'r there now - why go deeper into that cave?

Sure, that sounds -exactly- like something smug Dave would say.
Meanwhile, I, an undeserving Tech, worked them by the thousands. Get over
it.

>You didn't address my reply to your statement of
> my views toward those holding Tech Plus tickets.

No need to. Your reply indicated that Tech Plusses can be every bit the
DXer that you are. Right?

And that it was N0iMD whom you thought didn't know anything about DX.

Is this correct?

> I maintain that I only
> commented on you as an individual and never singled out a license class.

In which case, your assertion is wrong.

Let me bring you back to speed. We had a Frenchman on here and he verified that you were working out of band Frenchmen on 6 meters. I mentioned that I used to work FR6DX all the time on 10 meters.

Your disdain to my reference of FR6 was obvious. Perhaps you just didn't like that FR6 Op, the Frenchman that verified that you were working other frenchmen out of band, Frenchmen in general, or me working FR6 so easily. But you definitely didn't like it. Only you can decide why.

Oh yeah, Malaysia was a cakewalk and the JT1 called me. ;^)

Do they have 6m privileges?

and have added about 20 new ones on 160 in recent weeks.
> Am I supposed to be suffering while chasing DX from the U.S.? Maybe I
> should tear down a couple of towers and put an attenuator on the RX side
> of the Omni VI +.

Of course not Dave, just attenuate your disdain for any other hams, regardless of license class, having fun with what you consider to be your personal DX domain.

What's your new countries on 160M? I want to use a small coax loop to monitor 160 (I'm in a restricted neighborhood).

I had some interest in electronics before I even thought that I could become a ham. I had read some Popular Electronics and had built a crystal-radio kit when I was about 10 years old. I don't think anyone should be surprised that an interest in electronics was a precursor to an interest in ham radio.

Hub, W1BNB was my Elmer. He bought me the study guide, I assumed it contained everything I needed to know, just like it said, and don't recall asking many, if any, questions. I found the material to be easy enough. When I passed, I felt that I had really done something special. Hub agreed.

Not once did some grumpy old timer chastize me for having been lazy and not passing the same test he did to enter ham radio, with all of those schematics and a 13 wpm code test. Had I run across more than a handful of hams like that, I would have quickly decided that I had enough of that sort of thing.

Unfortunately today, though there are still not more than a handful of hams whose main focus is critical, the internet seems to give them a forum that never existed in my day, giving them an apparent voice all out of proportion to their relative lack of importance to the overall big picture of ham radio.

> 73,
> Ed Hare, W1RFI

Ed, yes, its much more tactful to let someone know via postcard, rather than confront them on the air. Receipients should consider it a courtesy notification and not some kind of permanent mark on their record. Nearly 100% of hams will accept it at face value and simply improve their operating, much like Birdman has done. I think only flagrant or repeated violations ever get beyond the section OOC. I'm sure HQ has better things to do than wring their hands over a ham that id'd after 12 minutes instead of 10.

BTW, the actual on-the-air "corrections" that I've witnessed couldn't have been an OO. Big, big, disasters.

Also the OO has a name and callsign, and if you get a postcard he can be called upon explain what they heard. If he was wrong its not likely he'll hear the same infraction again, right?

Most OOs don't publicize their volunteer work. If they did, every infraction ever heard anywhere would be reported to them to "take care of,"

and they just don't have that kind of authority. The program relies on the ham to accept responsibility for their actions

Also, you don't have to worry that the OO will blab who they sent postcards to. That's unprofessional, and they want to keep a low profile anyway.

>around like it really meant something.

Thanks for an attempt at discussing the subject rather than individuals.

I will take up some points on "exclusion" and "education."

As it is today, a US amateur radio license is for BOTH operator and station. The present regulations require every licensee to operate within the technical specification boundaries established for transmitters. This has somewhat recently been expanded to include EM radiation levels in the immediate space surrounding an antenna connected to a transmitter.

The skills of morse modes pertain solely to operating. There is no viable connection of operator skills to technical regulations regarding a station transmitter signal purity or to generated EM fields.

An emphasis on morse modes as established by the older regulations regarding morse rate versus class, with classes having graduated operating privileges, puts undue emphasis on operation. That made importance of transmitter signal purity and EM field generation secondary. Since the preponderance of radio amateur stations are in residential areas, this secondary importance posed a risk factor in everything from interference to other amateurs and radio services to possible harm to neighbors and those living in the same residence containing the amateur station.

By all photographic evidence in amateur radio publications and the rare item of amateur radio sales figures in EIA market information, the majority of amateur licensees use manufactured transmitters. This can cause those users to downplay or even ignore the technical signal purity regulations which pertain to all licensees. This can be interpreted (in the most extreme case) as disobediance of law. In most cases this is not disobediance but an undue confidence in the manufacturer OR a lack of technical skills and equipment access to adequately confirm that their transmitters are operating lawfully. No morse mode skills can substitute for confirming signal purity or

EM field regulations.

FCC regulations have always allowed US radio amateurs considerable freedom in station equipment. Transmitters may be manufacturered or home-built. That freedom, rather absolute as to freedoms, is far too often taken for granted. That freedom is also used as a rationale to deliberately or inadvertently ignore lawful technical regulations on transmitter signal purity. There has been very little, almost miniscule "educational" information available in amateur radio publications regarding measurement or measurement skills needed to comply with the law when compared with the relative masses of "educational" information on morse mode methods, learning, skills, jargon, lore in those same publications.

The conclusion that can be drawn from this emphasis on operating skills versus technical skills is that a "sea change" should have been done to make ALL amateur transmitters manufactured, type-accepted equipment and forbid use of home-built transmitters.

Another freedom also taken for granted is that the FCC has NOT required US radio amateurs to use a particular mode within a choice of modes as allocated on any amateur radio band. It has been several decades since there was a requirement to present proof of past operation as a requirement of license renewal. The FCC does NOT require exclusive use of morse modes over other allocated modes and each licensee has the option of individual preference within that allowed by their license class. However, the FCC requires only one mode demonstrated skill to be a first-license test requirement in two of the three US amateur radio license classes.

While it is, or should be well-known to others, a morse mode test for licensing is a common-agreement treaty matter established by the ITU-R. The FCC is constrained by the USA adminstration (as member of the ITU-R) to maintain the code test.

There is nothing technical to qualify morse modes as a viable test in regards to technical regulatory requirements. On-off keying was first used in radio for no other reason than it was the only practical method of transmitting any information by early, primitive radio equipment. On-off keying was already known and established for some time on landline telegraphy when the first true radio circuits were demonstrated in 1896.

That morse modes were tested at all in all radio operator licensing of 1912 in the US has absolutely NO bearing on the efficacy of manual telegraphy. Since it was the ONLY method used by everyone at the time, morse mode testing was simply practical.

The continued requirement for morse mode testing as a radio operator license requirement has been sustained largely through political pressure exerted by those who personally favored its use or the continuation of the morse test (for any given reason)

in amateur radio. There is NO technical qualification for morse mode testing 90 years after the first radio operator tests.

The choice for amateur radio then seems to be:
1. Retain morse mode testing and reduce amateur freedoms by requiring type-accepted transmitters.
2. Increase amateur freedom by removal of the morse tests.
3. Permit continued over-strong influence of old standards retention by a minority for the exclusive enjoyment of a minority.

>it's so is wrong.

In the original thread of this "state police have used CW" intermittent rationalizing,
Carroll stated "the LAPD was part of this network." I then went personally to an LAPD
division station and made inquiries regarding this assertion. I was told, both by a PR
dutied officer and another from the Technical Center (via telephone from the division
station's own phone) that no such communications mode was used in earlier times or even recent times. The current modes in use are voice telephone, data (both on
leased lines and through modems), imagery (facsimile, several formats including higher grades than common in personal computers) in the station; on radio there is
both single-channel and trunked voice, data (car-to-station with linkage to statewide
databases of several agencies), and multi-channel microwave. The California Highway Patrol (CHP) has freeways and unincorporated County areas under its jurisdiction and has similar communications.

In the aftermath of this original exchange, I gave a toll-free number for LAPD Public
Relations. They are a courteous organization, eager to give out information.

Much later I posted websites containing a wealth of information, primarily technical
on both the LAPD and CHP communications by radio. Those websites still exist as
do many others throughout the nation, Canada, and a few sites around the world. None of those sites contain any reference to "CW" or any OOK-CW modes in use even though many of the sites are indicated as being maintained by radio amateurs.

If there is no evidence to indicate something existed, there is no reason to believe
it did.

>It certainly was not bullstuff during the years when Morse code was
>considered current commercial radio technology. In that era, the Morse code test >served a valuable function, helping to self-train Morse operators for use in >commercial and military radio communications. That was, IMHO, the reason that >the FCC initiated and maintained the Morse test.

Other honest opinions (opposing an IMHO) include statements within the body of a Part of Title 47 CFR as simply generalities (sometimes called "standard boilerplate" phrases) of a general political nature. Such things exist in many other areas of regulation and are not unknown.

The FCC did not exist prior to 1934. Three other predecessor radio-regulating agencies existed with the first year of federal licensing of all radio operators being 1912. In 1912 the general state of the art of ALL radio equipment can only be described as primitive. The ONLY method of transmitting any information in the beginning of radio was by means of on-off keying codes. In that beginning of radio, it made practical sense to test for the ONLY practical means (used by all radio services) to radio communicate.

The inertia inherent in politically-motivated conditions and regulations seems to have kept morse mode testing for an amateur radio license for HF privileges for 90 years. Such inertia is not a viable regulatory reason for continuation of anything for so long. The FCC realizes this and has made public statements to that effect as long ago as 1990. They are constrained by an international agreement which may or may not vote to effect a "sea change" in all six parts of ITU-R S25.

"Ready reserves" of our national defense organization are the National Guards, Active Reserves, Inactive Reserves, and some State Guards (not all states have those). Only the first three have direct command and control possible

under the federal government. There is NOTHING in federal planning visible to the public (nearly all of it is so visible) that indicates radio amateurs are somehow, even vaguely a part of some "reserve" group specializing in some skill.

Some are confused as to other possible interpretations of standard boilerplate political phrasing...especially so when none of those statements (in Part 97.1) reference morse codes specifically.

A personal declaration of a country is not bona fide evidence such as
found in descriptions of countries in either The World Almanac or the
"CIA Factbook" (a non-agency Almanac-style document that is free
on the Internet, of printing cost fee if desired on paper). Such has no
verification as to its importance in world or African socio-political
affairs as has been detailed by major journalistic services. All the
major newspapers, wire services, documentaries, and many historical
reference works do NOT give a small country such importance as you
have indicated.

While the work of the Department of State is important and vital to
the USA, the entire department has been subject to much critical
scrutiny and some negative criticsm in the last half century. That is
painfully obvious from the same public references given above. They
are not sacrosanct nor noble nor pure nor pioneers in much of
anything except their task of being part of US foreign policy.

>No Len. I didn't pioneer amateur radio in Guinea-Bissau. There was a
>very active Cuban op in the country a year or so before my arrival and
>there was an active Ukrainian fellow. Erik SM0AGD has made several
>trips to the country both pre and post independence and an Italian group
>operated from the Bijagos Islands shortly after my arrival. There is no
>organized amateur radio in Guinea-Bissau though there is a fully
>equipped club station. People would seemingly prefer to eat than become
>radio amateurs.

The origin of the original thread involved a discussion of method
of control-command ("order-wire") of a State Department tele-

printer radio circuit. The claim was made by Heil that CW (mode) was somehow better ("neater" in the descriptor used then) than communicating in the circuit's assigned teleprinter mode.

Heil then tried to gloss over his rationalization by first stating that teleprinters "had to be synchronized," then changed that to "schedules established for certain communications" and eventually to disregard of everything and attempting to smokescreen everything under some cloak of secrecy (as in encryption of communications used in this exchange). NONE of that has any bearing on "being the only ham in Guinea-Bisseau" or even on amateur radio operation anywhere and is no reason for explanation of morse codes as being vital or necessary in amateur radio lincens testing..

>It is simply that you've as much as called me a liar for describing what
>was used. I've not ascribed any undue importance on my work or upon the
>country of Guinea-Bissau. Let me assure that it is not too late for
>you. You may kiss my ass any time at all.

In the original exchange I called the alleged method of order-wire use as "dumb" in comparison to what commercial and military teleprinter radio circuit operators used thirty years prior to the stated 1980s time period. It is my contention that such "reasons" stated for CW superiority in command-control of teleprinter circuits are still dumb...and that the original statement was simply a specious, unvalidated, unreferencible "State Department procedure" as claimed.

>I can assure you that the Department of State does not make public much
>of its communications procedures, equipment and the like. Since you
>already know of the classified nature of the work, you'd not likely see
>anything written up in an industry journal.

Government agencies' contract awards, cancellations, and equipment used frequently appear in industry journals. Sometimes they become cleared public news given out by the agencies themselves.

One such instance is the RCA Corporation RACES (Random Access Card Extraction System), a data storage machine using very large magnetic cards to store masses of information such as teleprinter messages. The Department of State purchased two of them in late 1960s, installed them in DC or nearby in the very early 1970s, allowed public disclosure of them "storing an entire month's worth of message information from the entire State Department communications." That same PR release stated that one RACES was main, the other a backup. Several dozen RACES were sold and used to civilian and government organizations at the same time, all the same and NOT classified in any way other than conventional trade secrets.

While I did not work directly on the RACES project at RCA EASD, that group was next to my group's lab area in Van Nuys, CA.

Knowing the storage capacity of a RACES and the amount of monthly message traffic of the third-largest US Army radio station in the mid-1950s, one RACES holding an entire content of State Department monthly messaging could not hold all of the monthly message traffic at ADA. The technical conclusion was therefore that State did not have near as large a communications capability in the 1970s compared to the US Army in the 1950s let alone entire US military. That conclusion could be drawn by anyone who collected publicly-cleared information.

There are many, many documents which have been cleared for public viewing, even document purchase through the GPO. One like the latter is what I have, a June 1967 USN Electronic Systems Command training and reference manual, "Principles of Telegraphy (Teletypewriter)," NAVSHIPS 0967-255-0010. Not only does it outline procedures and technical details for both wireline and radio teleprinter communications, the first chapter includes a history of ALL telegraphy that predated teletypewriters and the manual "morse telegraphy."

>The fact that you continue
>this "snow job" crud in a silly effort to dismiss my statements only
>makes you look like an old fool.

Invalid. The USN document does not reference any use of manual morse telegraphy as any sort of "order-wire" for a teletypewriter circuit. Stating that such WAS done twenty years ago, not giving any references, then hiding referencibility under some cloak of secrecy is foolish. QED.

>My work in Guinea-Bissau wasn't the
>topic and you've only taken this tack as a diversion.

I only stated that "Guinea-Bisseau has a population of about 1.3 million and its chief exports are cashews and peanuts." I added that this former colony is not an important topic of news reporting from the general middle of Africa. Readers are welcome to verify all of that. None need know of Heil's important, classified work.

>Your problem is that you see anyone who won't kow-tow to you as an
>arrogant elitist. What ever gave you the idea that hams don't read
>material other than ham radio publications? Why, that is simply elitist
>and arrogant of you.

Invalid again. I merely raise some points with publicly-referencible sources of verification to dismiss a number of arrogant and elitist viewpoints in here in regards to keeping the morse code test for US amateur radio license classes having below-30-MHz privileges.

I am aware that Ed Hare, Carl Stevenson, Cecil Moore read material other than amateur radio publications for radio information because they have made those statements. There is a wealth of information about the entire world of radio AND that small part of it used by

radio amateurs. The easy way out seems to be using the ARRL as
the major source of information (Big Brother leads the way) or just
stating "Hams have always done code testing and always will."

Radio amateurs are not exclusive in radio. They must share the
EM spectrum, co-exist with other radio services physically and
politically (vying for regulatory allotment). Hiding behind the past,
reputations, tunnel-vision selective history, and unreferencible
claims is not a good attitude for maintaining an existance in the
radio world.

>Yeah, that "insider" thing must have set you up as quite the expert
>there for a while. I've gotten the short notes of acceptance from
>McMullen followed by checks as I have from CQ in the past. It gave me a
>warm, fuzzy "insider" kind of a feeling. Give those editors and
>publishers hell, Len. Oh--the ones you are complaining about--are they
>the ones who didn't accept your stuff for publication?

I am not complaining about anything but the usual slanted-in-favor-
of-CW output of the ARRL. Their policy is automatic-first-rights-
with-no-possibility-of-compensation-for-reprints-as-they-see-fit.
For that reason I've never submitted any work to the ARRL, any
publication. HAM RADIO magazine was more mainstream and
negotiable in its 22 years of existance as an independent.
Radio hobby publications are not my only venue for professional
writing that started in 1967.

>Right, Len. Ham radio is an avocation which can be enjoyed by anyone:
>old folks, children, bakers, gas station attendants, farmers,
>bankers,etc. In short, it can be enjoyed, apparently, by just about
>anyone but you.

Invalid. Another gratuitous insult from Heil. This is followed by
another...

>> >Did you have anything on amateur radio you'd like to say?
>>
>> Yes. It is my opinion that amateur radio is an interesting, enjoyable

>pooh-pooh their efforts?

"SOME" does not equate to Heil's claim of "large numbers." Heil
is one of the "some." QED "hooey," "fertile muck," etc.

Attempts to change original wordings is not an unknown device in
trying to win message points.

>You have demonstrated your ignorance of what I was doing and how I was
>doing it on several occasions. Not many continue to wear their
>ignorance like a badge after having been provided with information they
>lacked. You're a true gold medalist among repugnant geezers.

The original thread was begun about "CW being an order-wire on
a State Department RTTY circuit" as somehow being a justification
for maintaining a morse code test in amateur radio. When someone
pointed out that such procedures are not done in OTHER radio
services, big Dave wrapped himself in "importance," the tarnkappen
of "secrecy at State," and the usual bullshit of "if you are not IN
ham radio you can't know anything about it." SOP, QED.

>Wow all that time and you still haven't managed to come up with a ham
>ticket despite your professed interest.

Tsk, tsk, another absolute, black-and-white, "if you don't love it
enough to get a 'ticket' you must hate it" sneer. :-)

The word "interest" does not indicate love, hate, or any gradation
in between of an avoaction. In US amateur radio any gradation
therein is overlaid by some sneering long-timers who want every
"interested" person to emulate them, to enjoy what the long-timers
enjoy whether they like it or not. :-)

In truth all long-timers are not of the same mould as Heil, they
simply enjoy what they enjoy and many of them just don't go
for the "traditional" aspects of working Deee-Eckks, tossing
their QSLs to the burro, sitting around belching and telling fish
stories of when they worked the "rare one." Then they puff out
sagging chests, thrust out their jaws, and beligerantly rant on
how "important" they are, their marvelous deeds and worthiness
as morsemen "keeping the skills and tradition alive". :-)

Those are a minority. Unfortunately they are a very vocal,
beligerant minority, who take great glee in putting down anyone
not liking what they like. They don't understand those that are

"different" (from them) and immediately charge "hatred" and
"lies" to opponents who are charged with something akin to
ham radio treason. :-)

>Writing technical articles for
>a ham mag isn't quite the same as being a ham is it?

Yes and no. Radio works on the same principles, using the same
hardware in amateurism as it does in all other radio services.

Those that want to stay ignorant of technology can just operate
and work Deee-Eckks and the "rare ones" and collect wallpaper
and certificates of "working" all different groups. Is that all about
"being a ham?"

>There'd be that
>actually being able to get on the air part among other things.

That is possible without any sort of license, perfectly permissible
by the FCC in the USA.

Having been ON the air, legally so, doing 24/7 HF communications
and VHF, UHF, microwave, MF, VLF communications, all within
appropriate regulations is not necessarily superseded by some
mystical joy and rapture doing it in a limited part of the spectrum
after obtaining authorization to be an amateur in a hobby. Of course
mileage does vary to some and a few still regard radio as akin to
mysticism or something the Rosicrucians will reveal to them after
writing to their scribe "Amorc" (or whatever it was).

>How stupid would a man have to be to put off obtaining an amateur
>license he professes interest in for *decades*?

Is that "stupidity" or is Heil engaging in yet-another insult fest?
I vote that he is a fest.

The word "interest" does not show Lust or Craven Desire or anything
else. The word has no specific gradation.

>How stupid would he
>have to be to remain ignorant of the way others feel about his lengthy,
>ponficating monologues posted to an amateur radio newsgroup?

No stupid. Brave enough, perhaps, to undergo an enormous amount
of pure insulting diatribe from self-professed "leaders" of ham radio
who wish to control hobbyists into strict, rigid adherence to their
magnifisence, royalty, and general claims of expertise in the past.

>You forget that others in this group have also had professional
>experience in communications which rival or surpasses your own. I'm one
>such professional.

...and also an amateur Brownshirt trying to make each non-agreement
with your own viewpoints as some excuse for Krystallnacht sequel.

Heil has shrouded his own efforts as a professional in a cloak of secrecy, a veil of self-professed importance, and all around smugmanship...and demanded worship and gratuitous praise for portraying a stereotypical Ugly American (ham).

>You've taken it upon yourself to as much as call me
>a liar in describing conditions of my work.

I have challenged Heil on WHAT HE WROTE IN THIS NEWSGROUP.
At no time was any communications directed to the State Department.

>You've attempted to
>belittle my work after you indicated that you wanted to discuss it.

I belittled what Heil WROTE IN THIS NEWSGROUP based on communications procedures on teleprinter circuits well established in government and commercial radio communications three decades before the alleged "neat idea (of CW)" was procedure was supposed to take place.

>Other communications professionals who post here, unlike you, have other
>credentials in that they are radio amateurs.

Let them post then. I have no problem with those who wish to discuss subjects. I have a problem with those who only want to belittle those who do not share their viewpoints. Heil is one of those latter types.

>That radio amateurs are proud of their calls, that they have status in
>amateur radio, that there are different classes of license seem to
>bother you to no end.

The problem is that Heil is OVERLY PROUD and cannot bear any disagreement to his viewpoint.

Why should there be a silencing of opposing discussion in regards to regulations involving GETTING INTO amateur radio?

Why should the only discussions about GETTING INTO amateur radio be those who are already IN and will never, ever be affected by license testing? That demand, which Heil trumpets loudly and off key is simply arrogant self-imposed leadership and pseudo-superiority, overly-proud eliteness that only benefits themselves.

>You are not, nor have you ever been part of the FCC. You are not, nor
>have you ever been a radio amateur. Sort of leaves you out in the cold,
>doesn't it?

No. I am a citizen of the USA who is a radio professional, a veteran, who still believes in the entire Constitution of the United States and the rights and freedoms guaranteed to all citizens. I don't believe in the suppression and control of interested parties by a minority of overweight-ego brownshirted control freaks who seek self-imposed rule just for their own personal benefits. I don't believe that any other citizen should be suppressed for having opposing viewpoints.

I think that's absolutely right. It's not a trivial amount of work, and it's not monumental either. The side of the coin I think Dick is looking at is his perceived correlation between work ethics and on the air behavior. His experience, in the area in which he reside may indeed show a correlation. I don't know because I don't live there, and I haven't had Dick's experiences. There may indeed be some degree of correlation. I know that learning the code isn't entirely trivial. I think that in general, people value those things in which they have something invested. (Not only those things, but those things as well.) And I also know people who don't put much value in things in which they have nothing invested. All I'm saying is that one shouldn't dismiss the idea out of hand. I don't think the code test is the answer in the long term. But I also don't think the idea Dick is trying to convey is entirely without merit.

Sounds like the island is closing down. The Joint Typhoon Warning Center on
Nimitz Hill closed shop a while back. DOD is using coarse storage data from
far away to fix storms now.

Maybe some transit flights to the PI right now.

Any news on Joel, KG6DX?

All depends on how many hams learn it and use it without the test.

Dick,

I never felt inferior ... never WAS inferior .. on the basis
that I wasn't interested in jumping through the hoop of

passing a 20 wpm code test.

My sense of self-worth is MUCH more solidly rooted
than that ... in solid accomplishments.

> You weren't required to do it then, just as they aren't
> required to do it now.

Not sure what you mean, but that's OK ... half the time
you don't make a lot of sense, so things are apparently
normal.

> Of course you had to forfeit the license, they don't.

I never forteited a license ... I've been licensed continuously
since the mid 70s ... should be hearing from the QCWA
folks any time now ...

BTW ... who are the "they" tha you keep referring to?
(You're back to not making much sense again ... forget
your meds?)

Joshua: While the gist of the whole CW issue here in this newsgroup often gets lost because of the intertwined debates...the most-often-used reason to keep CW testing in the licensure arena is to promulgate knowledge of a "useful..blah, blah, blah" (I can't remember the whole line--Larry or Dick can help you with that) and that it is most important to do so in the event of an emergency. Those of us who disagree with CW testing have the most-often-used reason as that CW knowledge is not "worth it" enough to have it as a part of the licensure testing. (Worth it, by the way, is a poor use of words...but man, I am beat today from work!)

That's why you'll see the debate often come full circle back to the mandatory CW testing. That's also why I posted in one of my posts last night, "now we can start all over again." It's really weird in this newsgroup--we're all stuck in a viscous circle of debate...LOL

Where I live, the repeater I use, is jammed by one or two people often. It is common knowledge who they are. Both ARE hams. I am not a board member of the repeater so I do not know what actions are or will be taken against those persons.
BTW I think owning, selling or buying ham equipment by non hams is fine. Transmitting by anyone on a frequency he/she doesn't have a license for (that includes hams with out of band radios) is, not only illegal, but very bad.
Thank you,
Dave kb9iig

Jim, I don't know what you mean by "as far as you know." I don't operate the CW--we have loads of other folks around. In the wee hours of the morning, I can often walk out with a pot of fresh coffee and everyone is "resting" while the bands are dead. I can tell you that on occasion, I've even sat down while "ribbing" someone about slacking that they better start working stations I can find (CW). I don't find 'em, they don't find 'em...and the bottom fell out all about the same time +/- half hour or so...

I'm all eyes, Dave. Give me some examples of CW that was used (not NTS) in an emergency or disaster. I am even making it so simple that I extend that to the use of CW on the Hurricane nets...do they use CW on the Hurricane nets? I know we never used CW on MARS...

>
> Let's see:
>
> - permanent/renewable license vs. 1 year one-time license

[begin sarcasm mode]

Yup ... it's a shame those "newcomers" get a license for
longer than a year ... makes it harder for the cranky olde fartz
to find time and opportunity to drive them off, right?
(remember the "No lids, kids, or space kadets" guy? A real
"welcome to ham radio" if I ever heard one ...}
(not!)

> - 1500 W peak output above 50 MHz vs. 75 W input

[temporarily leaving sarcasm mode]

I've stated that I (personally) think that 1500W PEP is way
too much power for the level of technical competence that's
demonstrated by the tech test.

[re-entering sarcasm mode]

> - All authorized modes and frequencies above 50 MHz vs.
> 145-147 CW, MCW and AM only

Yup ... got to restrict what the newcomers can do to to the point
where it's not attractive ... otherwise, they'll over-run "our" bands
(Not!)

> - All forms of authorized frequency control vs. crystal control only

Yup ... keep 'em rock-bound, despite the fact that rig stability
isn't really an issue any more ... that'll make them easier to avoid
and make it harder for them to work something interesting ... heck,
if you let them move around at will, they might actually get together
and teach each other a few things, and realize that they're really
not an inferior species ... just a bit less experienced.
(Not!)

> Add the 5 wpm code test and get:

> - 250 W peak output vs. 75 W input below 30 MHz

Wow!!!! (Not!)

> - CW and SSB on a piece of 10 M plus slices of 80/40/15 vs CW only on
80/40/15

Wow ... let newcomers use SSB! What heresy! (Not!) BTW ... you forgot
that data is also allowed in that sliver on 10m, not just CW (more heresy).

> - Vanity calls including 1X3 vs. sequentially issued calls that
specifically
> point out newcomer status

Yup ... got to brand those newcomers so "real hams" can easily
recognize them, either to avoid them or to give them a bad time.
If they can "blend in" with "the rest of us" what would become of us?
(Not!)

[end sarcasm mode]

Jim,

Almost sounds like there's some "newcomer" prejudice
showing on your part ... sounds like you're irritated that
newcomers don't have to endure the same hardships that
you had to as a novice. You might want to think it over
from that perspective a bit and do some self-examination.

Or maybe, you're just listing some of the changes that
have taken place without really complaining about them ...

But can you see how to a newcomer it *might* sound like
you begrudge them their privileges and wish they didn't
have them?

I have no objection to any callsign with the "SEX" suffix. Kim made it clear when she started posting in this newsgroup that she selected her vanity callsign in order to call attention to her self-admitted overly-endowed secondary sexual characteristics. Sex is something which applies equally to us all, and there is nothing inherently indecorous about it. Kim's callsign was chosen for the express purpose of inciting untoward attention to herself, for her own amusement. This is hardly an appropriate way for a mature, intelligent woman to behave, especially one who is married. It shows heinous disrespect for herself, her husband, and anyone who is forced to be exposed to her callsign -- thereby being placed in the undesired position of being a voyeur to her imprudent and salacious conduct.

Cecil:

You can delude yourself all you want with your twisted logic and
semantic pranks -- but nobody was ever "forced" to take a Morse
code test in the universally understood meaning of the term. And
you can post another volume equal to the Bible itself in quantity of
text, but you will never convince me that the term "force," when
applied to an entirely voluntary action, doesn't imply a nonexistent,
negative coercion.

Jim ...

Your comment seems an admission that you like Morse
testing because it forces people to learn it whether they
care to or not, in hopes that some will decide (after the
fact) that they will use it.

Let me paraphrase Ed's question: "Do you find Morse
less useful because *I* don't choose to use it?"
If so, why?

So I can safely assume that because you don't object to a SEX callsign because sex applies to us all, some form of envy is in place here to explain your objection to Kim's callsign, which apparently applies to something you do not have in ample proportions. That sounds like fascination by my read.

> Kim's callsign was chosen for the express purpose of
>inciting untoward attention to herself, for her own amusement.

There is an element of that in my call sign selection, Larry. >It shows heinous disrespect
>for herself, her husband, and anyone who is forced to be exposed to

A person either submits to the *force* of law embodied in the FCC
requirements or else that person doesn't obtain US amateur radio
privileges. Presently, a person who refuses to submit to the force
of law concerning the Morse code requirement, doesn't gain US HF
amateur radio privileges. Every US HF ham was forced (by the force
of law embodied in SS25.5) to pass a Morse code exam.

Actually, I never heard him. Of course, I hung out on the CW bands, so I guess I never would have. Back then, the CW guys and gals were generally the friendly, welcoming type.

If one were to judge by this forum, one would think that the welcoming is less common on the CW bands. In some ways, it has come full circle.

As one who thinks that the only future my favorite mode has is going to be found in the way that the CW ops of today promote the mode, I get so disappointed to see some rake it through the mud and then hold up the mudraking as a badge of honor. They hurt the cause the same way you used to hurt the NCT cause with some of the things you used to say. You learned a degree of temperance, while others seem to have lost it.

Make that *your desire* for me to be in an undesired position, Larry, as you fail miserably to make any valid point, as usual.

When you have a wife who loves and admires you, a job you are *really* happy about (instead of one you feel you have to defend every time), don't have the miserable attitude you have towards other people, and have impressed enough people to change their minds about how idiotic you are, then perhaps I'll value your opinion. Until then, you are the equivalent of a drunk who has a real hard-on for ruling over women.

Wow, I can't imagine a day when the CW guys predominantly were friendly.
Heh heh, actually that's a terrible generalization on my part, Ed. And,
actually folks like Larry, Little Dick, Dave Heil...whomever, are in the
minority. At least around here. Most of the CW folks are very accepting of
all hams, regardless of CW feelings. When the Restructuring debate *first*
hit the air down here, we had few nidyuts who said, "we're dumbing down the
bands."

But, when those of us who are already 5wpm hams, retorted that *we* were not
dumb, the quick response was, "Well, I am not talking about you." All we
had to do was say, "Then who *are* you talking about?" and they pretty much
re-surveyed what they had just said. (It's most of us Tech and Tech+ who,
at the time, would spend our entire weekends helping out those older hams
with antenna projects, retuning, etc.) We'd also ultimately fix problems
with antenna connections into tuners, computer peripherals wrongly attached

to TNCs, and on it goes. In fact, for a while there we Tech/Tech+'s would jokingly gloat that all this stuff would roll down our way, yet it was us who was keeping things going...heh heh

I have a feeling the folks like Little Dick and Larry and Dave would act the way they do without the ham radio forum. In fact, it is the ham radio forum that gives them the only soapbox they feel they can step up to, is my real suspicion.

>"observer" mean just that he/she observes but does not participate.

Bird:

Yes, that is essentially correct. An OO is under no obligation to make on-air
corrections, since doing so can go pear-shaped quite easily, if the person
on the receiving end of the "correction" takes umbrage with being chastised
on-the-air -- regardless of how politely it is done.

>Why did
>the ham operator allow a rule that was obviously being broken continue to be
>broken.

He didn't allow anything of the sort. It was *you* to broke the rule.

>I have noticed that I have paid more attention to my IDing
>practices since I received the notice but,

Good for you, that's the whole point of the OO program -- to make hams
aware of routine, possibly unintended violations, and become better
operators as a result. Whether or not they do, or go on to become deliberate,
chronic violators and start collecting NAL's, is entirely up to them. Your
decision to take the notice seriously and pay attention to proper operating
practices shows you are a good ham -- so carry on!

I think I still would be paying
>just as much attention if I received a note for not IDing after 25 min. I am
>not angry, however, and have no ill will against the observer.

That's good, especially since the violation occurred on the first second of the
11th minute of your failure to ID. Receiving a notice for 40 minutes as
opposed to 25 is kind of an absurd complaint from someone who was in the
wrong in any case.

>Third, I would be very happy to get any information on being a observer. I
>have much time on my hands and would consider "offering" my time and service
>to help the hobby. I have had my ticket for 9 years and am a tec+.
>
>Do you have to "know some one" or be friends with the "right people".

Yeah, pretty much.

>Do you have to be appointed.

Yes, by your ARRL Section Manager, with the coordination of his OOC
(Official Observer Coordinator).

>Do you have to be an amateur extra.

No, unfortunately, that isn't a requirement, but it should be.

>Is offering you time and service enughf to be considered.

No, not nearly. You should have a long and well-rounded on-air
operating experience, encompassing more modes than just 2-meters
FM. You should know the Part 97 Rules and Regulations absolutely
stone cold. You will have to take an open book training course and
pass a test, and you will find that there are infinitely more things you
cannot do as an OO than you can. You are NOT a "radio cop." You
are merely an observer. You have the right to send out OO reports of
apparent infractions, but they must be carefully worded to ensure
that you are not coming across as an authority with actual enforcement
power. Only the FCC has that. You can report violative actions to
the FCC -- that is your sole enforcement capability, however. You
are strictly working in the background, with no authority, no power,
and infinite ways to get your own self wrapped around the legal
axle if you mess up.

>Do you pay your own postage on notices.

I always did.

>Is there a good web page to go to.

Just do a search on Official Observer on the ARRL web site, or use
the index.

>How much paper work is involved ETC....

Plenty. If documenting violations is a problem for you, don't
bother. You are an evidence collector, not Lennie Briscoe going
through a "perps" door with gun drawn.

>Finally, Thanks again to all the volunteer observers. You are all doing a
>GREAT job. I wold be proud to join your ranks.

How do you know they're *all* doing a great job? I used to be an OO
myself, but moved away from that area and didn't bother trying to
be one again, mainly because of the abuses of their non-existent
"power" I'd seen in other OO's. When I spoke to my SM about getting

back into it years ago, I was informed that OO's were supposed to be sending out "attaboy/attagirl" reports to good operators, as opposed to OO Reports of violations. This kind of political correctness annoys me, so I decided I couldn't be bothered. Knowing the rules and regulations, and conforming with them, is something that is EXPECTED of good hams -- there is no need to publicly praise them for being in compliance. When being done properly, being an OO should be a totally unrecognized and thankless task, and I don't think you're clear on that concept.

I think the requirements for becoming an OO should be broadened to the point where only hams with Extra-class licenses, high quality monitoring/recording equipment and the skills to properly utilize them, and a perfect record of conformity with the rules and regulations are allowed to participate in the program.

You don't think that it would be changed by the fact that newcomers are no

longer required to learn it at all? Surely you don't believe that all those folks who
have so much problems finding time or enough interest will suddenly find that time
and get interested just because it is no longer a requirement, now do you?
If so, there's some nice beachfront property in Arizona I can get for you

cheap.

Necessary for what? Nope, I wasn't born with a license but have had one
since 1963. My basic math skills tell me that in November, I'll have
had a ticket for 39 years.
>
> > What you call snobbishness, others
> > would call experience.
>

> personal DX domain.

Brian, your lack of DX knowledge is not based on your having fun working
stations with non-U.S. calls. Go back to your OH2BH nonsense or your
material on selling QSL cards for fun and profit for clues. One of the
wonderful things about being human is that I get to pick and choose
those for whom I reserve my admiration or my disdain. I don't reserve
blocks based on license class for either group.

> What's your new countries on 160M? I want to use a small coax loop to
> monitor 160 (I'm in a restricted neighborhood).

PW0, H7, OM, KG4, EA6, J3, V73, VP8 S. Georgia among others. Coaxial
loops work well. I use a 5 foot diameter hardline loop about two feet
off the ground here with a variable gain preamp and a U-100 to turn it.
An MFJ 1026 noise canceler helps too.

I'm sure that the study guide wasn't the only thing. There isn't a vacuum here. I know in at least my case, I used the question pool, talking to other, more experienced hams in my club, a Rat Shack electronics manual that I got when just getting back into the electronics field, and a lot of info on the web. Smith charts especially on the web. My original line of work was as an electronics technician back almost 30 years, so there was some carryover there, or at least exposure.

Ed:

Sorry, but you're wrong on this one. I am not "voyeuring" her call sign --
she has "forced" me to observe it, and I reject it on the basis of it's
inappropriateness in a family-oriented hobbyist radio service. However,
I realize that in your own ARRL HQ enforced worldview, my "take"
on Kim's call sign is politically incorrect, so once again, I find I must
forgive you for doing what you are "forced" to do in order to maintain
the touchy-feely, PC, Welfare-state supporting image of a professional
ARRL apologist for everything that is weak and perverted in the ARS.
Carry on, Ed -- you're doing a good job!

Pretty much the truth. Why would that not be the case?

> A person
> can do it until the Association says something.

Which can be triggered by a neighbor complaining to the
association.

> Well that should be great
> news for those that also have their FM stereo hooked up to the antenna
they
> use for TV.

If you say so. I've stated several times that IF the ONLY use a
TV antenna was put to was to RECEIVE only, odds are no
one would complain as long as the person that was doing the recieving
simply said they were ONLY using the antenna for TV reception.
Additional use for FM wouldn't be detectable by anyone UNLESS
the homeowner told the neighbors.

> Like I said, the law is a great loop hole unless someone in the
association
> moves for civil legal action against a person that has also hooked up a
> Stereo, shortwave or any other type of radio receiver to the antenna used
> for TV.

I agree...and I seriously doubt "the association" could ever PROVE
that the antenna was being used for "additional" receive purposes
beyond the TV channels.

> If you use it for cb or ham radio transmission I think that if you cause
> RFI then you will probably have to disconnect the antenna from the ham rig
> or you can fight it out in the courts. If the association doesn't find out
> you shouldn't have any problems with a dual use of the TV antenna.

Agree again, with the caveat as you note, that RFI could
be the downfall as to detection of use beyond that addressed by
the FCC pre-emption..

> Of course, The ARRL can go ahead with their attempt for special
legislation

Congress? I doubt it...not enough clout by hams...although if there
was ever a more favorable time, this would be it based on "emergency
preparedness" in the light of September 11.

The courts? So far that has been a no win.

Cheers,

Get it right, will ya? Show where I ever said anyone memorized the entire pool.
You can't because I didn't. Only a dreamer would ever start on such a venture.
But some people DO memorize the part for an element. And keep retaking the
test for it till they have passed it, by some combination of sheer luck and an
agile
memory for word associations. Once that element is passed, assuming they want
to be licensed on the next level, they start again on that part of the pool.
Questions
are not usually memorized, but word associations are to match questions and
answers. Some people would never start toward a ham radio license if they couldn't
do it that way. I've had people tell me that they would have never attempted
to became a ham under any other system.

You already know all this, I told you all about it long ago. So why play dumb?

Why should the FCC care anyway if hams stay current or not?
As long as hams can hook up antennas to transceivers and
such boxes, and not splatter all over the spectrum...

They're not in the business of handing out gold stars....

What the hell is a "personal declaration of a country"? It sounds like
you are contemplating proclaiming your street as a new entity.
Thanks for the spiffy info on the "CIA's World Factbook". Did you know
that each embassy and consulate receives a large box of 'em each year?

> Such has no
> verification as to its importance in world or African socio-political

I didn't give it "such importance", Len. I told you what was going on
there and I told you what each embassy and consulate does regardless of
the relative importance of a country.

> While the work of the Department of State is important and vital to

Everything in government has been under "negative criticism" and
critical scutiny, Len. The FBI has, the CIA has, the NSA has, the State
Department has, the DoD has. What are you really trying to say?

> >No Len. I didn't pioneer amateur radio in Guinea-Bissau. There was a

This is a ham radio group, Len. Did you come here to discuss State
Department commo (which you seemingly know little about) or amateur
radio (which you seemingly know little about)? You brought up the
subject of my work in Guinea-Bissau. You are the one who as much as
called me a liar over that which you do not comprehend. You lied about
my stating that I'd originated what I described about FOUR OR FIVE YEARS
ago. You only play a game of "I know more than you do about your job"
which I have to describe as moronic.

> >It is simply that you've as much as called me a liar for describing what

a) You don't understand the reasons for use. b) I don't give a damn
what the military did. I didn't work for the military in
Guinea-Bissau. I used what was in place. Neither the Department of
State nor I owe you a rationalization.

Keep breathing for a couple of decades more and you may be able to
"collect" what State is currently using. I can't fathom the reason for
your typing the several paragraphs of filler above. Is it more of the
"I know more about your job than you do" stuff?

The State Department is not a branch of the United States military.
It's Bureau of IRM (formerly Office of Communications) can do whatever
it damn well pleases despite the Navy and/or you. Don't like it? Take
it up with State? Invalid indeed.

>

Nothing is invalid simply because you proclaim it. What you claim that
you "merely" did is again false. You neatly snipped what you actually
said. It shows this latest statement to be a lie.

> I am aware that Ed Hare, Carl Stevenson, Cecil Moore read material
> other than amateur radio publications for radio information because
> they have made those statements. There is a wealth of information
> about the entire world of radio AND that small part of it used by
> radio amateurs. The easy way out seems to be using the ARRL as
> the major source of information (Big Brother leads the way) or just
> stating "Hams have always done code testing and always will."

So you are now stating that three hams read material other than amateur
radio publications.

> Radio amateurs are not exclusive in radio. They must share the
> EM spectrum, co-exist with other radio services physically and
> politically (vying for regulatory allotment). Hiding behind the past,
> reputations, tunnel-vision selective history, and unreferencible
> claims is not a good attitude for maintaining an existance in the
> radio world.

Hams know that they are not the only users of the radio spectrum. I'm
quite certain that they don't depend on you to inform them of it. I do
like your boogeyman act in spreading alarm based on your own negativity
toward amateur radio--quite scary!

Ham radio is not in imminent danger of losing its spectrum.

> >Yeah, that "insider" thing must have set you up as quite the expert

It doesn't matter what the actual number is, Len. You'd still find it
easy to insult and belittle them. What you can't do or can't know, you
try to pull down. You aren't converting anyone to your way of thinking,
Len. You simply piss folks off.

> Attempts to change original wordings is not an unknown device in
> trying to win message points.

Yeah? Where are the records of these "message points" kept? What
constitutes a score? I haven't seen any list of message points so they
must not exist.

There's a long list of things that newcomers are not required to learn.
Typing (keyboarding) is one of them. Yet, most people who need to know
how to type learn how to type. Most people who need to know Morse code
will learn it. I know hams my age who learned Morse code for the purpose
of passing the exam and never used it again. They cannot remember more
than a handful of Morse characters and sure can't carry on a CW QSO.

That's true for the Novice exam. A year later, I memorized the ten pages in
the General section. Four years later, in 1955, I subscribed to QST and sprang
for an ARRL Handbook. I didn't really start to understand the technical material
until 1957, my junior year in college.

"What's wrong with that" is that YOU said it. One year you were the
boy
genuis that snowed all his math teachers with his astronomical IQ and
photographic
memory, never ever cracked a book and got his EE purely by rote
memorization.
Now we find you have an entirely foreign story for a different
viewpoint of the same
set of circumstances.
By we know that is exactly what we can expect from you and
that you'll deliver right on schedule.

Yep, we all do, and I count several of them as close ham friends. It doesn't matter
to me that they have no affinity for CW. What matters is that they went through the
same process to learn that fact that we all did. At least an equal number of us who
went through that same process learned that we DO have some level of attraction
to radiotelegraphy, and so we progressed in skill until we can use it effectively

on the air (and that doesn't necessarily mean at any particularly high speed).
THAT is what will be lost by dropping all code testing. Most new hams will
never learn, will never know, the most basic of all radiocommunication modes.

There's a hell of a lot of ham radio that isn't in the FCC regulations. You don't

know that?

As a matter if fact there have been judges, Senators, school teachers, doctors,
lawers, merchants, chiefs and many more professions licensed as hams. Your point?
Surely you ARE referring to ham radio licensing.

Surely you know that isn't what I think, and for sure it isn't what I said.
The question is, what does your lame statement prove? Nothing I can identify.

Gee, that isn't even close to correct, is it, Lenny? The thread (some
four or five years back was over whether the U.S. government was using
morse. I commented on that idea and explained that the Department of
State used CW as late as the late eighties/early nineties. It was a
fact. I was there. I used it. That you casually dismiss my statement
as false is asinine. You recently gagged it up again for reasons known
only to yourself. At no time did I mention my "importance" and if USG
security bothers you, take it up with your congressman.

...as in, "I am interested in taking up oil painting but perhaps I'll postpone it for forty years". If you aren't interested in what hams do, you probably aren't interested in amateur radio at all.

> In truth all long-timers are not of the same mould as Heil, they

There are numerous areas of interest within amateur radio. You need to become a ham to become a participant. You haven't done so despite claims of "interest" which go back decades. All the rest of your rant, including those your description of attributes of DXers are addition products of Anderson Mfg.

> Those are a minority. Unfortunately they are a very vocal,
> beligerant minority, who take great glee in putting down anyone

Then your answer is no. I didn't ask you how radio works.

> Those that want to stay ignorant of technology can just operate
> and work Deee-Eckks and the "rare ones" and collect wallpaper
> and certificates of "working" all different groups. Is that all about
> "being a ham?"

Those who are up on the latest technology can do the same things if they like. Their ham tickets permit any number of activities.

You've never done anything in your life "24/7" except breathe. You
can't operate on the ham bands sans license. You remember, that
"interest" of yours which goes back decades.

> >How stupid would a man have to be to put off obtaining an amateur

Decades, Len? Decades? You've farted around here long enough for even
the slowest of the slow to obtain an amateur ticket.

> >How stupid would he
> >have to be to remain ignorant of the way others feel about his lengthy,

Okay, Walter Mitty, you're BRAVE. If you're brave, stifle that twitch
in your breast and go forth and obtain even a no-code ticket.

> >You forget that others in this group have also had professional

I'm great on shrouding, Len. The Department of State makes us shroud.
I was told not to reveal things to just any inquisitive clod on the
street. I think they meant you. The remainder of your rant is evidence
of mental imbalance on your part.

> >You've taken it upon yourself to as much as call me
> >a liar in describing conditions of my work.
>
> I have challenged Heil on WHAT HE WROTE IN THIS NEWSGROUP.
> At no time was any communications directed to the State Department.

I don't care if you call or write State, Len. They're quite used to getting quizzed by fruitcakes. I know you "challenged" WHAT I WROTE IN THIS NEWSGROUP. If it wasn't for this newsgroup, I'd have NO CONTACT AT ALL WITH YOU. Ask yourself this, Leonardo: What reason would I have to manufacture material stated in this newsgroup? Would it change the outcome of the code debate? Would it gain me riches? Would it convert numbers of "code test haters" to my way of thinking?

> >You've attempted to
> >belittle my work after you indicated that you wanted to discuss it.
>
> I belittled what Heil WROTE IN THIS NEWSGROUP based on

> to take place.

Is it okay with you if State used its own procedures on the African continent and in a couple of other remote areas of the world? Is it conceivable to you that you don't necessarily have a lock on all of the world's commo knowledge? Was the Department supposed to get clearance from you before embarking on such a radical move?

> >Other communications professionals who post here, unlike you, have other

> belittle those who do not share their viewpoints. Heil is one of
> those latter types.

Hell, Len. YOU belittle those who don't share YOUR viewpoint and you aren't even a ham! You aren't a grain of sand in the hourglass of amateur radio.

> >That radio amateurs are proud of their calls, that they have status in
> >amateur radio, that there are different classes of license seem to
> >bother you to no end.
>
> The problem is that Heil is OVERLY PROUD and cannot bear any
> disagreement to his viewpoint.

Please define "OVERLY PROUD" for us, Len. There are always going to be those who do things you can't do and those who do things you haven't done. Are they all "OVERLY PROUD"? I recognize those who have done things I have not accomplished, have gone places I haven't been able to go and who are better at some things than I am. I don't call them

"OVERLY PROUD". Get a grip, man.

> Why should there be a silencing of opposing discussion in regards
> to regulations involving GETTING INTO amateur radio?

Is there such a silencing? You've certainly had more than your fifteen minutes of fame here. I've said it before: Say what you want. Just don't expect folks to fawn all over you in agreement with you. It isn't likely to happen and apparently hasn't happened. Remember though, even through these tough times, you are BRAVE.

> Why should the only discussions about GETTING INTO amateur
> radio be those who are already IN and will never, ever be affected
> by license testing? That demand, which Heil trumpets loudly and
> off key is simply arrogant self-imposed leadership and pseudo-
> superiority, overly-proud eliteness that only benefits themselves.

You've had your say. No one is obliged to give your views much credence or to give a big "Hurrah for Leonard H. Anderson!" in response. Getting into amateur radio has been largely made easier than ever. Still, you've not even attempted to obtain a license. I think you to be "OVERLY PROUD".

> >You are not, nor have you ever been part of the FCC. You are not, nor

> should be suppressed for having opposing viewpoints.

Yeah? So? I'm a citizen and think most of us here are citizens. I'm a veteran. I don't believe your views have been suppressed. In fact, I think you've blown smoke here for longer than most. Your purpose isn't an amateur radio license. Your hobby is haunting this newsgroup.

I understand you've been generating some noise yourself on the bands as
well as in your more typical postings here. Did you have something to
contribute other than noise?

You know, for a guy who knows as much about Guinea-Bissau and the State Department as you do, I'd think you'd have realized that our embassy in Bissau has been closed for quite some time after a coup d'etat in that country. Guess you still have a few things to learn.

who are competent CW operators became that way is because they were required to learn the Morse code and pass a test to prove it. When that test is gone the CW bands will, sometime hence, begin to lose their populations which is exactly what the Carl Stevensons want. Then not to far in the future it will be wall-to-wall SSB.

So far all he has had to offer has been noise of the rudest sort. Even after Extra Lite time, what did he do, stick a mike in his face and try to make up for 25 years lost
time. All the while trying to bash those of us who "just did it" for doing it while he
sat out his adult life in protest of an "awful hazing ritual" known as a code test!!

Ain't it amazing!!!

I don't care what you "require", "Schmitt". This present exchange began
at your instigation. I didn't know you from squat until you found it necessary
to take your own swipes.

Now that you have gotten your nose rubbed back in your own foolishness,
you don't care for it. So sorry about that.

>You have acted in an
>immature and dishonorable way and I wish not correspondence.

Well, let's see about this, "Schmitt"...YOU take me to task in a PUBLIC
forum about what YOU percieve is an "e mail" matter...

Then you make inflammatory comments of a personal nature, none of the like
had I ever directed at you, and then tell ME how "dishonorable" and "immature"
I am.

>You seem to fight with anyone and every one...(snip)

Nope. You haven't been paying attention. My other comments are against
one person and one person only. And that after I absorbed several weeks of HIS
angst for not agreeing with him over Morse Code, of all things.

YOU brought this on yourself, Gerry.

>..... I have no interest in such a person.

Thank God for that, Gerry. You don't know how worried I was about how I
was going to explain THAT to my wife.

>If you want to fight there are more than enough people in RRAP to
>accommodate you.

So far, there's only two. Lennie the Liar Anderson, And Gerry the Jerk
Schmitt.

>If you can find the spare time from the fights you
>might try to grow up.

Back at ya, Gerry. Maybe next time YOU have such "criticisms" that you
feel you just HAVE to vent, YOU will take your OWN advice and do it in a

private forum, and then make sure it IS some of your business.

>Plonk

Very mature. I can see you sitting there with your hands over your ears
going 'ICAN'THEARYOUICAN'THEARYOUICAN'THEARYOU....."

Oooooops.

Military Affiliate Radio System. Air Force MARS, in particular,
incorporates thier members into various local base resource teams.

By the way, with the exception of a few military members assigned for
liasion or leadership roles, ALL members of all three MARS programs are, and
must be, licensed Amateur Radio operators.

Guess if they (the MARS chiefs and the branches themselves) didn't think
it was too important, they'd let CBers and FRSers do it too, huh?

>There is NOTHING in federal
>planning visible to the public (nearly all of it is so visible)
>that indicates radio amateurs are somehow, even vaguely
>a part of some "reserve" group specializing in some skill.

AND...lest you forget, Oh Worldy Knowlegeless One...

The Federal Emergency Management Agency, the Department of Defense, and
the Department of State have Memorandums of Understanding with the Amateur
community through the American Radio Relay League.

Further operating agreements exist with the two auxiliaries and various
other governmental and private agencies.

>Some are confused as to other possible interpretations of
>standard boilerplate political phrasing...especially so when
>none of those statements (in Part 97.1) reference morse
>codes specifically.

Not a one of those MoU's mention ANY mode. No interpretations are
necessary, except by those trying to denigrate or dismiss the service of
thousands of fellow Americans in thier chosen "avocation" and insist on making
the unwary believe in thier "Big Lie" techniques.

Worked on one New Mexican...guess if he keeps at it....

>An emphasis on morse modes

There is no such thing as a "morse mode".

There are modes in which the Morse Code may be used to encode
intelligence, but it is NOT a "mode".

Just like there is not now nor has there ever been a "CW Test".

>While it is, or should be well-known to others, a morse mode test
>for licensing is a common-agreement treaty matter established by
>the ITU-R. The FCC is constrained by the USA adminstration (as
>member of the ITU-R) to maintain the code test.

Oh...NOW the FCC is constrained by the treaty.....Hmmm...Very interesting
that you now conceed this fact. You have only been denying this for three
years that I have been in here.

Finally realize that you are at the BACK of the parade screaming "WAIT FOR
ME!"..?!?!

>The choice for amateur radio then seems to be:
>1. Retain morse mode testing and reduce amateur freedoms by
> requiring type-accepted transmitters.
>2. Increase amateur freedom by removal of the morse tests.
>3. Permit continued over-strong influence of old standards
> retention by a minority for the exclusive enjoyment of a
> minority.

Well, Lennie, the FCC has already stated that they will be glad to drop
the Code tests as soon as the covenants of the treaty requiring it are removed.
The ARRL has removed thier objections to it, and it would appear that the
great majority of Amateurs either favor that, or are resigned to it's
inevitiability.

So why do you find it necessary to be such a Putz about insisting that it
is anything EXCEPT the way it is?

Never mind an answer...we already know how myoptic your response will be.

Not correct...Popular Communications published a rather interesting item
some many years ago in which a picture of a Los Angeles communications facility
was using CW. This was, according to the article, part of the Interpol net,
and was used for liason with the FBI.

Needless to say, this was mid-thirties.

Sorry, Lennie. Some of the Yuppies in LAPD need to review thier own
history.

My ex-girlfriend hated my hobby so much, when she said to me, *either the Cb goes or I do*, I gave her a hand to pack her bags. Seriously though it did cause many huge arguments between us… Have any other Ham/Cbers had problems with their wife/husband/partner, over what mine described as *a weird hobby*?

Hmm, if he resells Godaddy.com, then what shows up when you go to
administer your domains?
I deal with Godaddy directly, and I can change where my domains point at
any time.
There are some registrars that do a bit more for you, but they charge extra
for that service. They just don't tell you about that.

What is so "foreign" about his story, Dick. He says he memorized the material to get his license and he memorized the material to get his EE. His point, by my read, is that if amateur radio is broken because some hams can memorize enough to pass the tests, it has been "broken" for more than half a century.

You think that hordes of hams are "word associating" their way to passing the tests and I believe that most hams pass their tests the same way I did -- with a combination of learning, memorizing, lucky guessing and hoping that the tougher questions don't appear on the exam they get.

Thanks for the link. There was no MIXDA when I was there, just MARC.
Getting to see KH2D and AH2S yelling at each other was probably one of the
reasons for the new club.

That's a bold statement that KH2JU makes. The military drawdown in the
early 90's must have taken a severe toll on the ham community there.

I can understand how a 15-year old can use a computer to look at girls and
cars, but how and why could a 15-year old use a computer to enjoy booze?

And what would a 15-year old's fascination with girls, cars and booze have to
do with the reason that 15 year olds find computers more interesting than
amateur radio but 25 year olds do not?

>> Is the usefulness of CW changed by whether we have code testing or not?

> You don't think that it would be changed by the fact that newcomers are no
> longer required to learn it at all?

Are you saying, then, that the other modes are not useful because newcomers do not have to learn them to pass their tests? They thrive in amateur radio just fine without pass/fail mandatory testing. Is the usefulness of CW so little in your mind that you feel it should be the only mode that requires a welfare state support system?

>Surely you don't believe that all those folks who have so much problems
>finding time or enough interest will suddenly find
>that time and get interested just because it is no longer a requirement,

>the CW bands will, sometime hence, begin to lose their populations
>which is exactly what the Carl Stevensons want.

Carl Stevenson doesn't care one way or the other whether Morse code operation continues on the band or not. Why should he?

If the test goes away -- some think we should say when the test goes away -- the things you are saying about Morse code lacking sufficient usefulness to survive without a pass/fail test and the way you drop insults at potential users will serve to hasten its demise.

You are creating a self-fulfilling prophecy of doom and gloom, not Carl. IMHO, you are a greater enemy of Morse code use than you believe you are.

Exactly my point. So smug that he follows up with:

True, Marty doesn't need my nonsense, but I was commenting that one
individual can have such a large impact on that segment of the hobby, and
large, well moneyed groups (such as the ARRL) has so little. Outside of
running the DXCC. It was not meant to detract from his good deeds. I just
didn't need to hear how a VP of Nokia lives in a low income neighborhood.

Selling contacts. Welp Dave, just the other day Steve made a little slip
about "charging for a contact." This idea is so pervasive that even people
whom you think are knowledgeable about DX think it. They have to retrain
their common senses to reconcile Part 97. Its unnatural.

Damn that's good. This neighborhood is so full of noise that its hard to
hear the clear channel stations on AM sometimes.

Brian

Yep, sure sounds like Dick doesn't want to take
on the task of being a proactive recruiter to one
of his favorite modes...but rather wants to sit back
and do nothing on the basis that as long as every new
HF ham must pass "the test", some of them will
join the CW affinity group.

Sure doesn't bode well for CW's future...IMHO.

> on the air (and that doesn't necessarily mean at any particularly high

Wasn't meant as sarcasm, Carl. I was just listing the differences.
Are any of my facts incorrect?
>
>Yup ... it's a shame those "newcomers" get a license for
>longer than a year ... makes it harder for the cranky olde fartz
>to find time and opportunity to drive them off, right?

The first QSO I ever had was with an old-timer who did not
try to drive me off. Now I'm the old timer. Do you see me trying
to drive off newcomers? Do you see me calling anyone names
like "stupid", "idiot", "twit", "cranky olde fartz", "a$$hole", "fossil" or
some such?

>(remember the "No lids, kids, or space kadets" guy? A real
>"welcome to ham radio" if I ever heard one ...}
>(not!)

That was Mike, W2OY. He was on phone - 75 meter AM, actually. Not
CW and not in the Novice subbands. He's been dead several years now.

Do you know what his gripe was?
>
>> - 1500 W peak output above 50 MHz vs. 75 W input

>demonstrated by the tech test.

We know you don't like high power, Carl. Do you know of any
abuses of the power allowed to hams because of lack of technical
knowledge? If not, why do you insist on making folks jump through
technical test hoops just to use 1500 W?

>
>[re-entering sarcasm mode]
>
>> - All authorized modes and frequencies above 50 MHz vs.

>> Add the 5 wpm code test and get:
>
>> - 250 W peak output vs. 75 W input below 30 MHz
>
>Wow!!!! (Not!)

We all know you hate high power.

Another thing that has changed from those days is homebrewing. How many newcomers start out with homebrew equipment today? It was common back in 1963. My first rig was homebrew, and it has been followed by many others.

>
>> - CW and SSB on a piece of 10 M plus slices of 80/40/15 vs CW only on
>80/40/15
>
>Wow ... let newcomers use SSB! What heresy! (Not!) BTW ... you forgot
>that data is also allowed in that sliver on 10m, not just CW (more heresy).

Sounds to me like you have a prejudice against CW and cannot imagine that it could be fun for newcomers.

Do you know WHY Novices and Techs got 10 meters?
>
>> - Vanity calls including 1X3 vs. sequentially issued calls that
>specifically
>> point out newcomer status
>
>Yup ... got to brand those newcomers so "real hams" can easily
>recognize them, either to avoid them or to give them a bad time.
>If they can "blend in" with "the rest of us" what would become of us?
>(Not!)

Actually the Novice call was a pain in the neck in some ways because
you had to get new QSL cards after upgrading.

>[end sarcasm mode]
>
>Jim,
>
>Almost sounds like there's some "newcomer" prejudice
>showing on your part ...

Only in your imagination, Carl. I'm simply stating facts.
Ed constantly mentions the "4 page study guide of 1963"
so I filled in the blanks.

> sounds like you're irritated that
>newcomers don't have to endure the same hardships that
>you had to as a novice.

I'm simply pointing out the enormous differences 40 years has made.

I have also suggested (with Richard Plourde) a post-S25.5 license structure to
address some of the imbalances of the current system (like 1500 W for
newcomers) and at the same time LOWER the requirements for new hams.

One additional fact: Nobody is required to start out with a Tech today, just as
nobody was required to start with a Novice in 1963. All newcomers have always
had the option to skip over the "entry level" and go straight for General or
its
historic equivalent.

>You might want to think it over
>from that perspective a bit and do some self-examination.

Good suggestion. After careful consideration it seems to me that the
comparisons
made could be taken out of context, even though nowhere have I said "we should
go back to the way it was". In other words, some readers may project their own
biases on what I wrote.
>
>Or maybe, you're just listing some of the changes that
>have taken place without really complaining about them ...

Now you've got it. In fact, think about it the other way - perhaps
the complaint is that the old Novice was too restrictive.
>
>But can you see how to a newcomer it *might* sound like
>you begrudge them their privileges and wish they didn't
>have them?

Only a newcomer that was biased against the past....

Are any of my facts incorrect?

>"resting" while the bands are dead.

They aren't using the right bands, then. Maybe they just aren't serious
ironbottom operators. Maybe their setups are not very good. (I've seen some
really poor excuses for antennas used on FD).

Maybe they just want sleep and disconnected the antennas so you wouldn't bother
'em anymore ;-).

>I can tell you that on occasion, I've
>even sat down while "ribbing" someone about slacking that they better start
>working stations I can find (CW). I don't find 'em, they don't find
>'em...and the bottom fell out all about the same time +/- half hour or so...

Yes, 10 meters usually fades late at night.

I've been on every Field Day since 1968, and I can tell you that at least some
bands stay open all night. I've done the overnight thing almost every year -
even had a story published in QST about one FD occurrence.

80 and 40 meters are THE bands to be on after dark on FD. in fact, 80 meters
doesn't really get going until after midnight most of the time. 40 is good
around the clock, but really shines when the sun goes down. 20 and above are
sometimes good and sometimes not.

But don't tell me the bands all go dead late at night on FD. I've got the
experience
and the logs that show otherwise.

True fact: Couple years ago, W3RV & I worked AC6XG on Field Day. 20 meter
CW, some time after midnight. I think it was the year the group used my call.
Gawd, that was fun.

>
> They're not in the business of handing out gold stars....

It's not a question of "handing out gold stars" ...

Two of the primary purposes of the ARS are:

1) self-training and education in radio/electronics
2) advancing the radio art

Someone who's stagnated in the distant technical
past obviously isn't doing #1 and is incapable of
doing #2.

Thus, It would seem that the FCC *should* have some
incentive to provide a mechanism that would assure
that, at least most, hams remain reasonably technically
competent in terms of relatively current technology.
(I say "most" because NO testing system is 100%
perfect.)

My partner hates the 2 things I enjoy the most, Radio and Computers.

I trtied to offer the option of all day down the pub, or in front of the
football and for some reason that didn't appeal either ;-)

Seems that anything that doesn't involve being with them 100 % of the time
is likely to cause problems ;-)

Best Regards,
Alan

I estimate about 20% of hams have useable proficiency in Morse code. That is
about 125,000 folks, a number I could reasonably term "a load."

However, unless there are at least 5 hams available, odd are that none will be
useabily proficient in Morse code. I would not deem that very reliable.

You have always been a gentleman, Jim, and even those that disagree with you respect you, and have some expectation that both will learn from reasonable discourse with you.

Unfortunately, there have been too many insults to go around on both sides of this debate. But for completeness, don't leave out "inferior," and "knuckledragger."

The really sad thing is that often those who devolve to insult somehow think that cussing and calling names strenghtens their points. It is almost as if they envision that everyone will gasp and think that this MUST be a serious thing because it even made a great guy like <name> act in such a childish manner.

In reality, I bet the opposite is true. If the only counter to the NCTA position were the insults, the PCTA position would lose in a heartbeat. And vice versa, of course.

Hello Toxic Waste:

Your better off without her I would think. I think she would incourage a hobby that you enjoyed.

However women are like bus's, when one leaves, another will show up sooner or later.

Now you can affor to buy a large Linear Amplifier, and massivly high gain antenna system, every thing has a silver linning.

True, but its when they shout "Room for one more inside" It puts me
off a bit :-)

I'm beginning to get a complex.

Nick

> abuses of the power allowed to hams because of lack of technical
> knowledge? If not, why do you insist on making folks jump through
> technical test hoops just to use 1500 W?

Because, without adequate technical competency, 1500W at
VHF/UHF with unlimited antenna gain can be downright
dangerous, not only to the person who's (mis)using it, but to
his/her family and neighbors ... not to mention that most 1500W
amps still use thermionic FETs (tubes) and therefore have high
plate voltage supplies, which introduces yet another danger
factor for the incompetent and those around him/her.

Thus, a test of adequate technical competency would be a
RELEVANT, REASONABLE requirement for such high powers,
not just a "hazing ritual" "hoop to jump through."

> >
> >> - 250 W peak output vs. 75 W input below 30 MHz
> >
> >Wow!!!! (Not!)
>
> We all know you hate high power.

I don't "hate high power" ... I simply thing that it is misused A LOT,
that it presents potential dangers (electrical or RF exposure ... the
latter particularly at VHF/UHF and up), and that better antennas
and modulation and coding schemes offer FAR more "bang for the
buck" than brute force power. However, if the more elegant solutions
(antennas, modulation, coding) don't provide adequate link margin,
then I have no problem with someone using higher, allowable powers.
(But, according to the minimum power rule, which is probably the
MOST violated rule in ham radio, the guys who are telling each other
that they are all S9+40+ to everyone else in the group are MISusing
their amps, IMHO.)
>
> Another thing that has changed from those days is homebrewing.
> How many newcomers start out with homebrew equipment today?
> It was common back in 1963.
> My first rig was homebrew, and it has been followed by many others.

Because of code testing, most newcomers today enter as techs. The
most versatile piece of gear they can acquire as a 1st rig is a 2m HT.
How many "experienced, long-time" hams do you think are technically
capable of building the equivalent of, for example, a Yaesu VX-5R?
(let alone building it cost-effectively, when buying parts in small
quantities
at outrageous prices compared to what the OEMs pay?)

> >> - CW and SSB on a piece of 10 M plus slices of 80/40/15 vs CW
only on
> >80/40/15

> >Wow ... let newcomers use SSB! What heresy! (Not!) BTW ... you
forgot
> >that data is also allowed in that sliver on 10m, not just CW (more
heresy).
>
> Sounds to me like you have a prejudice against CW and cannot imagine
that it
> could be fun for newcomers.

- From my experience, most don't find it fun ... or even interesting ...
that's why so many refuse to do it.
I don't find it fun ... I don't use it. I have NO problem with anyone
who WANTS TO using it to their heart's content. I DO have a
problem with it being used as an unnecessary barrier designed
to keep people off of HF.

> Do you know WHY Novices and Techs got 10 meters?

Because the FCC wanted to make ham radio at least marginally
more attractive to newcomers ("novice enhancement"). But I'll
bet that the "traditional society" lobbied the FCC to make sure
that they didn't get "real ham" privs in the other HF bands.

> >> - Vanity calls including 1X3 vs. sequentially issued calls that
> >specifically

us?
> >(Not!)
>
> Actually the Novice call was a pain in the neck in some ways because

> you had to get new QSL cards after upgrading.

So what? With any "mark of Cain" newbie call, I'd think that most
upgraders would check the "give me a new call that reflects my new
class of license" box on the form, just to get away from the nagging
and derision from the cranky olde fartz.

> >[end sarcasm mode]
> >
> >Jim,
> >
> >Almost sounds like there's some "newcomer" prejudice
> >showing on your part ...
>
> Only in your imagination, Carl. I'm simply stating facts.

OK ... I believe you to be an honorable person, so I'll
take your word on that.

However, I think in all honesty, you'd have to admit that
a LOT of what I said in sarcasm above really DOES
represent the feelings of quite a lot of long-time "real hams."

> Ed constantly mentions the "4 page study guide of 1963"
> so I filled in the blanks.
>
> > sounds like you're irritated that
> >newcomers don't have to endure the same hardships that
> >you had to as a novice.
>
> I'm simply pointing out the enormous differences 40 years has made.

40 years has made enormous differences in EVERYTHING. That's
part of the problem ... you can't keep ham radio "like it was 40 years
ago" and expect it to be vital, heathy, and viable for the long haul.

EVERYTHING changes and hams need to accept change as well.

> I have also suggested (with Richard Plourde) a post-S25.5 license
structure to
> address some of the imbalances of the current system (like 1500 W
for
> newcomers) and at the same time LOWER the requirements for new hams.

You're right ... I remember seeing some of that, but it got a bit
involved and I missed a lot due to business travel, then it seemed
to be gone ...

> One additional fact: Nobody is required to start out with a Tech
today, just as
> nobody was required to start with a Novice in 1963. All newcomers
have always
> had the option to skip over the "entry level" and go straight for
General or
> its historic equivalent.

Yes, but I believe that the leap from nothing to General is a larger
leap today than it was in the past, with the exception of 5 wpm vs.
13.
There is a place for an entry-level license ... and other than the
power and lack of HF-specific material, I think the tech is not TOO
far off the mark for a "starter" ... I'd beef it up just a bit, get
rid of
code and add HF privs when the ITU Radio Regs allow it, and
I think it would be a good replacement for the old Novice entry point.
Much more versatile, agreed, but I think that is necessary to make
the ARS attractive to newcomers.

> >You might want to think it over

> >have taken place without really complaining about them ...
>
> Now you've got it. In fact, think about it the other way - perhaps
> the complaint is that the old Novice was too restrictive.

I do think the old Novice was FAR too restrictive ... maybe
when it first came out ... but technology made it reasonable
to ease many of the restrictions ... like VFOs, 250W PEP,

etc. You *seemed* to be (at least on the edge of) complaining
about those liberalizing changes ... if you weren't my sarcasm
wasn't for you ... it really was for those who actually DO feel
the way I was expressing in sarcasm.

Mine is licensed (as G6MXR) but not really active. I am 'allowed' my antenna etc., a nice pair of rooms for the shacks, and a I don't recall any grief over buying rigs etc. She has even said I can have a rig in the bedroom when I have finished all the DIY.

Mr. Robeson,

All e-mail received from you is filtered and forwarded to
abuse@AOL.com send whatever you want I'll never see
it and AOL will. As previously noted growing up would
be in your best interests perhaps some anger management
classes would also be good. Remember I'm not the one
who has accused thousands of innocent people of treason.

I wonder what kind of zero places his entire self worth in Morse
Code and abusing people. I guess I have an idea now. Just
a friendly suggestion if you redirected your hate into personal
development you might make something of your self.

Have a nice life.

Lets look on the bright side Walt, personally I have no trouble in finding a girlfriend, unlike the average British Ham, who takes up the hobby purely because he is incapable of pulling a bit of totty, although it might help if he bought a bar of soap and a toothbrush.

I suppose its fair to say, a British Hams radio is his equivalent of a blow up doll...

Yeuk, dont even bear thinking about ;-))

Have a nice day Walt.

In past times many CW ops came from the military and other
services and many of them went on to become hams. So few of
those operators come from that source these days that if
hams don't learn CW it will die out as a viable
communications mode because of that singular fact.
It has been made more than clear
that almost all others who intended to become hams do not
realize nor understand the basic utility of radiotelegraphy,
and instead prefer to just skip learning it beyond the level
mandatory for licensing. That should make it clear what the
future holds when testing is no longer here.
The old NCI saw that "Morse lovers must 'sell' the mode'"
is a total
fraud, as they well know. You can't sell to most people what
they don't
understand and have no experience with, yet think they know
all about.

How is that an entirely foreign story? I do have a high IQ and
I did have a photographic memory for numbers and graphs when
I was young. Using a photographic memory *IS* memorizing, Dick.
There's no inconsistency. Do you think because it was easy for
me to memorize that I should have avoided memorizing? Get real!

IOW, you think that morse code can't survive on it's own merits. It needs a government mandate, despite the fact that the HF privileges that went along with it were entirely unrelated.

>abuse@AOL.com send whatever you want I'll never see
>it and AOL will.

OkieDokie, Gerry, whatever your preference.

Cowardism suits you, I see. You demand people "take it to e mail", but
then you cut and run when they do.

I imagine it's been that way your whole life.

>As previously noted growing up would
>be in your best interests perhaps some anger management
>classes would also be good. Remember I'm not the one
>who has accused thousands of innocent people of treason.

I have no anger to deal with, Gerry. Just a morbid humor at ididot like
you who will initiate something like this and then run for cover when it get's
dumped back in yuor lap.

>I wonder what kind of zero places his entire self worth in Morse
>Code and abusing people.

Hmmmmm.....Interesting.....

First of all I DON'T place my "entire self worth" in Morse Code. I'd
challenge you to provide soem sort of doucumentary evidence of such, but you
are a non-hacker, so I won't wast the time.

Secondly, spin as much as you'd like, you are STILL the one who initiated
this. All you have to do is shut up and it stops. I KNOW an apology for
opening the flood gates is impossible, so we'll just leave it at that.

>I guess I have an idea now. Just
>a friendly suggestion if you redirected your hate into personal
>development you might make something of your self.

Speaking of classes, Your Selfworshipness, may I suggest some objectivity
training?

You make accusations of others and decray thier behaviour, but you do the same exact thing. This ahs gone on for a couple of days now...It would have been just my post about Lennie getting caught lying again, which is NOT in dispute. But then you added your spite and bileness to it and here we are.

So what does that make you?

>Have a nice life.

It's going along rather nicely, thanks. Some major disappointments along the way, but some major accomplishments too.

And all without you, Gerry. Imagine that.

Steve

Why do so few CW ops come from the military nowadays, Dick?
What percentage of presentday hams regularly use CW?
What percentage of future hams will learn CW after the
requirement is dropped? What will happen if hams organize
for the purpose of keeping CW alive? What would happen
if you got off your lazy butt and helped that effort?

You opinion is not worth much, Gerry, and I am not overly concerned with your threats either.

You initiate a series of flaming posts in RRAP, demand that others "take it to e mail", then make a big deal about how "abused" you are when they do.

Be my guest, drop this in AOL's lap if you'd like. The original posts are archived in Google, and if it comes to the point of an attorney having to get involved, we can simply allow them to retrieve that and see "what's what".

You are not being "stalked" in ANY definition of the word, Gerry. Like Lennie, methinks you enjoy creating a confrontational enviroment and then claiming "victim" status when it come back to you.

Spine and honesty do not seem to be your two strong suits, now are they?

Adios, Gerry. Keep your insults, lies and threats to yourself. I am sure you enjoy them more than anyone else.

Steve

I learned Morse code in Cub Scouts long before I knew about ham radio, Dick.
I don't use CW because I was required to learn it. I use it because it is
fun for me. No matter what happens to the Morse code requirement, there
will be hams who learn Morse code because CW is fun. Those hams who consider
CW to be fun will find it to be useful, just like today.

Yes, and that isn't the BEST part, by a bunch. Go to the APCO (Associated Police Communications Officers) website and read the "history of police communications". You will find not a single mention of the extensive and longlived interstate police radiotelegraph net, yet the APCO manuals that I have in my possession, one for the year 1945 and the other 1951 both have extensive information regarding the entirety of that net, with detailed callsign and frequency information for all participating agencies.
These were the handbooks used by participants on this net to address messages, route traffic, and otherwise find information needed in the business of police communications. Note that there was a large amount of other information in the manuals, they were a comprehensive file of ALL police radio activity of the time, including all agencies' frequencies,

contacts with
neighboring departments, and frequency monitoring activities.
Not all agencies participated in the CW net, of course, just those where there was a need to
pass long distance communications regarding police work and where the traffic load warranted the installation of a station. Most states had a single point of contact with this net, though some used extensive instate CW nets as well, and most smaller agencies handed off their long distance message traffic to this contact station.
The reason for those nets was not obscure in the least. MONEY. In the days when AT&T
had a monopoly on long distance telephone (and teletype) circuits, and charged whatever
the traffic would bear, and at the same time government administrations were more sensitive
to tax issues, and costs of service, the CW nets were a very attractive and cost effective
communications device. Since all departments who used radio had console dispatchers

already on the payroll, it made excellent economic sense to use them for dual duty, and also
make long distance CW operators of them. That's exactly what they did, and many hams
wound up sitting at those consoles working CW a part of their shifts. As always, some of
the dispatchers liked to work CW more than voice, and I knew one ham who is now SK

who spent a large part of his career doing nothing but working CW on that net. Since others
preferred to do only voice, that was an easy work schedule task to resolve.
And of course the most populated states had an internal wire teletype net that handled most
of their intrastate messaging needs. But even they also participated in the interstate police CW net, and the few who had no station on the net could be contacted through one who did.
California had one of the wire line TTY nets, as well as a station on the interstate CW net
that was located in Sacramento. Of course LA had a CW station that could be brought up on
the net as needed. As local circumstances changed so did the activity on the net, naturally. It's all in the APCO manuals published during those years.
The police CW net was in use to a diminishing extent into the early 1970's, and one of the
last stations to close down operations was the CW relay station at Flagstaff, AZ. Where I
worked, wire teletype replaced CW just before I hired on, but the CW installation remained in
place for another year, and the state HQ station, which was a major interstate relay, continued in service on the CW net to its closure. And yes, I was given a Morse code test as a part of
the pre employment tests I took.
For a time you

could read more about all this in the first person report of a ham who worked for 13 years
at the Flagstaff police CW relay station, which was a division of the Arizona Highway Patrol
at this website....

<http://fohnix.metronet.com/~nmcewen/tel_off.html>

Last time I looked that entry was evidently no longer shown. Maybe Lennie got to

him with one of his enchanting rants about "how things really were" as opposed to the true
facts. Fortunately I printed a copy while it was still there.

A Brief History of Amateur Radio Licensing In The USA Since WW2 (1946-2002)

by N2EY - Part 1 of 4

Introduction

This is a brief history of the past 56 years of amateur radio licensing. We'll look at how the current structure came to be, and what the future may hold. Along the way we'll also take a look at the development of the amateur radio service.

To really understand how we got where we are today, it's necessary to look back at least 50 years or so. Amateur radio has existed since the very first days of radio, and licensing of hams goes back to a least 1912, but to save time we'll start about 50 years ago.

The Postwar Period (1946 - 1950)

In the years following World War 2, ham radio was quite different than it is today. The prewar 160 meter band had been taken over by LORAN during the war, and was not available to hams. Over the next several decades it would be reopened to hams, a little at a time. The 15 meter band had been allocated to amateurs in 1947, but had not been opened yet. The 30, 17 and 12 meter bands were far in the future. VHF and UHF allocations were plentiful, but equipment for those bands was primitive, and almost all homemade or converted surplus. The prewar 5 and 2-1/2 meter bands had been shifted to the new 6 and 2 meter allocations.

Most hams used the 80, 40, 20 and 10 meter bands. The 40 meter band had no phone segment - it was all CW. The 11 meter band had not existed before the war - it was a sort of compensation for the loss of 160. It was also odd in that it was not harmonically related to the other bands, and was shared with medical and industrial RF users.

Almost all operation was CW or AM phone. All equipment used tubes, and was large, heavy and expensive by today's standards. The transistor was invented in 1948, but reasonably priced transistors would not be readily available to hams until the mid '50s. Most ham stations were a mixture of homemade, commercially built, and converted war surplus gear - a station with only manufactured gear was rare. Separate transmitters and receivers were almost universal. Many stations used crystal control, and it was common to work another station on a different frequency, because crystals were expensive. Long CQs and replies to CQs were common, because most hams tuned the entire band looking for replies.

Hams in the continental 48 states had callsigns like W1AW and W3ABT - W, followed by a numeral, followed by two or three letters. Hams in the US possessions had calls like KH6IJ and KL7ABT - K, followed by a letter/number

combination denoting the possession, followed by two or three letters. There was a very limited "vanity call" program - if a ham wanted a 1X2 call and met several criteria, such a call would be issued. If a ham moved to a different call area, he/she had to get a new callsign that matched the district of the new location. You could always tell where a ham station was located by its callsign.

World War 2 had several effects on amateur radio. Amateur radio was shut down soon after Pearl Harbor, due to the security risk. Amateurs in most of the rest of the world had already gone off the air in 1939. Thousands of amateurs went into the military and merchant marine services, and many did not come back. In addition to those amateurs who did return, many thousands of newcomers who had been exposed to radio in the service wanted to get ham licenses. The war also sped up the rate of electronic development, and had forced mass production methods on the electronics industry. The cost of producing high quality components dropped dramatically. Technologies that were laboratory experiments in 1938 were in common use less than five years later. The trend toward miniaturization began during this time.

After the war, large quantities of radio and electronic equipment and parts were declared surplus and offered for sale at pennies on the dollar. Much of it was brand new, and easily adapted to amateur use. The cost of putting a station on the air, and the time required to build it, dropped dramatically.

During this time there were also the first signs of things to come. Television, first promised as far back as the late '20s and in limited operation before the war, spread quickly in the late '40s. Television interference became a major concern of hams in TV areas. SSB, used by a few hams in the early '30s, became much more practical for amateur radio use with the development of low cost crystal and mechanical filters and phasing networks. Wartime developments in VHF/UHF technology, as well as surplus parts and equipment, made that part of the spectrum much more accessible to hams. The first amateur RTTY stations began to appear, using mechanical teletype equipment obtained as surplus from various sources. Some amateurs used narrow band FM voice, which required a less expensive transmitter than AM.

Before and immediately World War 2 there were 3 classes of amateur license - Class A, Class B, and Class C. The requirements for each license class were:

Class A - 13 wpm code test, sending and receiving. Basic and advanced written tests on theory and regulations. At least one year of experience as a Class B or C licensee. Exam given at FCC examination points only. All amateur privileges were granted with a Class A license.

Class B - 13 wpm code test, sending and receiving. Basic written test on theory and regulations. Exam given at FCC examination points only. All amateur privileges EXCEPT 75 and 20 meter phone were granted with a Class B license.

Class C - Same as Class B, except tests given by mail.

There was also discussion of a "Class D" license, with privileges above 200 MHz only. This was not acted upon until 1951.

All amateurs could operate on any amateur frequency, with up to the legal limit of power - but only Class A hams could operate phone on the popular 20 and 75 meter bands. Class B and C hams' phone privileges were limited to the bits and pieces of 160 that hams were allowed to use, 11 and 10 meters, and VHF/UHF.

Licenses were good for 5 years, and renewable. Renewal required that the operator certify that he/she could meet all of the current requirements for licensing. Also, renewal required that the license holder make least 3 contacts on the amateur bands in the six months prior to the renewal application - and the contacts had to be on CW, not voice. All licensees had to be US citizens.

An accurate log of all transmissions had to be kept. Mobile and portable operation were allowed, but if a ham wanted to operate away from his fixed station, and would be gone for a period of more than 48 hours, written notice of the mobile/portable operation had to be sent to the FCC. Before 1949, mobile operation was limited to the ham bands above 25 MHz. Mobile and portable stations had to identify themselves on the air as "mobile" or "portable".

The FCC had district offices that conducted exams in many major cities. In addition, the FCC would send out examiners to scheduled examining points on a regular schedule. If you lived within 125 miles of a quarterly examining point, you had to appear in person for the exam. Exams were usually given only on weekdays, which meant taking at least a half day off from work for adults and waiting for vacation if you were still in school. The district offices usually required no appointment, but the quarterly exam points often required advance notice.

All tests for a given license (code and written) had to be passed in the same session. If you failed any test, you got no partial credit and had to wait 30 days or more to take the test again. If you passed, you could go on the air only when you received your new license in the mail, which was typically a six to eight week wait.

If you lived more than 125 miles from an examining point, or had a permanent physical disability that prevented you from going to an exam session, or were on active military duty, the Class C exam could be taken by mail. First, you found a volunteer examiner to give you the test. This was usually another ham, but could be a person with a commercial telegraph license as well. You then sent away to the FCC for the proper forms, filled them out and had them notarized. The written exam was in a sealed envelope. The volunteer examiner gave you the code test, and if you passed, certified that you did so and gave you the written test. The volunteer examiner acted as a proctor only - he/she wasn't supposed to even look at the exam. The written exam was sent back to the FCC for marking, and if you passed, your new license came in the mail, and you could go on the air as soon as it arrived. If you failed, you had to do the whole thing all over again. The process typically took about six to eight weeks to complete.

If you had a Class C license and moved to within 125 miles of a quarterly examining point, you had to appear for reexamination within a certain time, or lose your license. If you had a Class C license and wanted to upgrade to Class A, you not only had to travel to a quarterly examining point, but you would have to take the Class B exams as well as the Class A written exam. No credit

was given for exam elements taken by mail.

There were about 60,000 U.S. amateurs in 1946, and about 90,000 in 1950. The amateur allocations in 1949 looked like this: (Frequencies in MHz):

3.5-4 CW 3.85-4 Phone, Class A only
7-7.3 CW
14-14.4 CW
14.2-14.3 Phone, Class A only
26.96-27.23 CW/Phone
28-29.7 CW 28.5-29.7 Phone
50-54 CW/Phone
144-148 CW/Phone
220-225 CW/Phone
420-450 CW/Phone (50 watt power limit)
1215-1295 CW/Phone
2300-2450 CW/Phone
5250-5650 CW/Phone
10000-10500 CW/Phone
21000-22200 CW/Phone

Restructuring, Changes and More Changes (1951 - 1956)

In the early '50s ham radio changed very quickly. A major influence was growing concern about television interference, or TVI. Transmitters had to be designed and built for to produce a much higher level of harmonic rejection than was needed with prewar designs. SSB was becoming common on the ham bands. Manufactured equipment was more common and less expensive. A few companies were offering equipment in kit form, which resulted in substantial savings for the builder. Coaxial cable and pi network output circuits, practically unused by amateurs only 10 years earlier, rapidly replaced parallel tuned tank circuits and open wire line.

But the biggest changes came in the area of licensing and regulations. In 1951 the FCC overhauled the venerable ABC system, and added three new licenses - the Novice, Technician, and Extra. The new license requirements and privileges were:

Novice - 5 wpm code test, sending and receiving. Simplified written test on theory and regulations. No experience required or allowed - anyone who had previously held any class of amateur license was ineligible for a Novice. Extremely limited CW privileges in parts of the 80 and 11 meter bands, plus CW and phone privileges on part of 2 meters. 75 watts maximum power input, crystal control only. One year license term, nonrenewable. Exams given at FCC examination points or by mail if conditions for mail exams were met. The Novice was meant to be a sort of "learner's permit" to help new hams get started.

Technician - 5 wpm code test, sending and receiving. Basic written test on theory and regulations - same written test as General class. All amateur privileges above 220 MHz. Exams given at FCC examination points or by mail if conditions for mail exams were met. The Technician was meant for those who were more interested in VHF/UHF experimentation than HF operating. The proposed

Class D license was implemented as the Technician.

General (old Class B) - 13 wpm code test, sending and receiving. Basic written test on theory and regulations. Exam given at FCC examination points only. All amateur privileges EXCEPT 75 and 20 meter phone were granted with a General license.
Conditional (old Class C) - Same as General, except tests given by mail.

Advanced (old Class A) - 13 wpm code test, sending and receiving. Basic and advanced written tests on theory and regulations. At least one year of experience as a General or Conditional licensee. Exam given at FCC examination points only. All amateur privileges were granted with an Advanced license. This license was to be phased out and replaced by the Extra. To this end, no new Advanced class tests were given after 1952, but holders of Advanced class licenses could renew and modify them indefinitely.

Extra - 20 wpm code test, sending and receiving. Basic and higher level written tests on theory and regulations. At least two years of experience as a General, Conditional or Advanced licensee. Exam given at FCC examination points only. All amateur privileges were granted with an Extra license.

The new Novice license was an instant success, and thousands of new Novices got licenses and went on the air as soon as the license became available. The Technician got off to a slower start, but became more popular when first 6 meter and later 2 meter privileges were added. These new licenses became so popular that in 1954 the FCC made them available by mail only.

The announcement that there would be no more new Class A/Advanced licenses after the end of 1952 caused many hams to get one while they were still available, rather than face the more difficult requirements of the new Extra license. A few amateurs went after the Extra, though.

But in early 1953 the FCC made a surprise about-face and announced that all amateur privileges would be granted to all holders of General, Conditional, Advanced and Extra class licenses.

Callsigns were changed slightly. In some districts all of the W prefix callsigns were issued, so the prefix K began to be used. Novices got distinctive callsigns, in the following fashion: In the continental US, Novices got callsigns like KN5LZO and WV2ABC. The letter immediately preceding the numeral was either an N or a V, denoting Novice. When the Novice upgraded, this letter was dropped. In the possessions, the first letter of a Novice callsign was made a W instead of a K, as in WL7DEF. Upon upgrading, the W became a K.

Several more changes also occurred in this time period. In 1953, 40 meters got a phone segment, and Novices got a subband on 40. In 1954, the 15 meter band was opened to amateur use and Novices got a subband there, but lost access to 11 meters. 50 kHz of 20 meters was lost to other services. The retest requirement for Conditionals was dropped in 1952, and the distance requirement for a Conditional license was reduced to 75 miles in 1954. The procedures for mail and in person exams remained the same.

By 1956 there were over 140,000 US hams, and growth was exceeding 10,000 per year.

160 meters was returned to hams in a very limited fashion. Access was dependent on geographic location and time of day, ranging from 1000 watts to 25 watts to no access at all. It was confusing, but better than losing the band altogether. The amateur allocations in 1956 looked like this: Frequencies in MHz):

1.8-1.825 1.875-1.925 1.975-2 CW/Phone (Subject to geographic and power limitations)
3.5-4 CW 3.8-4 Phone Novices 3.7-3.75 CW
7-7.3 CW 7.2-7.3 Phone Novices 7.15-7.2 CW
14-14.35 CW 14.2-14.3 Phone
21-21.45 CW 21.25-21.45 Phone Novices 21.1-21.25 CW
26.96-27.23 CW/Phone
28-29.7 CW 28.5-29.7 Phone
(Technicians had all privileges above 30 MHz except 144-148)
50-54 CW/Phone
144-148 CW/Phone Novices 145-147 CW/Phone
220-225 CW/Phone
420-450 CW/Phone (50 watt power limit)
1215-1300 CW/Phone
2300-2450 CW/Phone
3300-3500 CW/Phone
5650-5925 CW/Phone
10000-10500 CW/Phone
21000-22000 CW/Phone
All above 30000 CW/Phone

End of Part 1

I guess it all depends on how the 'memorizer' feels about it. If he saw
it as a meaningless waste of his time, he probably wouldn't have much
respect for the system. If he saw it as a valuable use of his time, he
would probably have a better attitude about it. People can have such
opinions any kind of testing; Morse code, or otherwise.

The problem is YOU decide for them and you should know better. If a group
on a frequency runs high power, how do YOU know that one of them doesn't
need the rest to run that power level to overcome a bad local noise problem,

poor propagation conditions to his location, which may be in a distant area
from the others, or some other such variable? You DON'T. Just because
most of the stations in a group don't need to run high power to talk to
each other doesn't mean that a single station couldn't be the cause of
the need for the others to run it. Those of us with extensive HF background

have seen this happen repeatedly.
You just insist on dictating your version
of your vision onto the rest of ham radio. FCC sure needs to put you
in charge of rule making. NOT!

Fortunately FCC, at least, has a grasp of this concept, and wisely
did not attempt to define that rule in detail. What a contorted can of worms

that would be.

The day you stop equating an oldtimer CW supporter with
"stagnating"
is the day you may begin-at least have a chance- to be a credible
witness.
Til then, it will be you with the SSB microphone stuck in your
mouth and some of us
"olde fartz" who are actually on the air with the digital modes.

Maybe we need a gang of Feeling Police? If someone doesn't feel
correctly about their license, they don't get one?

> communications mode because of that singular fact.

Unfortunate but true. And it worked the other way, too - hams often
became military or commercial radio operators, aided in large part
by their CW/Morse and technical experience.

But both the military and commercial communications folks have long
been reducing/eliminating their dependence on radio operators. Not
just
Morse/CW ops, but the whole idea of a person whose job is specific to
operating radio sets. The Navy, for instance, no longer has the
"Radioman" classification at all.

> It has been made more than clear

> future holds when testing is no longer here.

Maybe. But some of them DO learn it beyond the bare minimum
required for licensing, just as some go beyond the theory
knowledge required to pass the written test.

> The old NCI saw that "Morse lovers must 'sell' the mode'"
> is a total fraud, as they well know.
> You can't sell to most people what they don't
> understand and have no experience with, yet think they know
> all about.

Maybe - but it's up to us Morse users to "sell" the mode anyway.

It's pretty obvious that the FCC, for whatever reasons, wants to
get rid of code testing ASAP. They've been pushing that agenda
since 1975 - it's nothing new. Now the only thing keeping the
one remaining test in place is S25.5, which will almost certainly
not remain after WRC 2003.

We will not be able to "sell" all hams on the merits of CW/Morse,
but we don't have to "sell" everyone. Just a reasonable number.

Consider what has happened to AM voice. Back in the late 1950s and
early 1960s the mode almost died out in amateur radio, pushed out
by inexpensive SSB transceivers. But a few AMers kept interest
alive, and began to "sell" the mode. And the number of amateur AM
stations on the air began to grow again, and continues to grow.
Equipment that once sold for pennies on the dollar, or was literally
junked, has become prized and expensive even if in need of major
work. Hams are building new AM rigs from the ground up. There are
AM demo/special event stations at many major hamfests. And many of
the AM crowd are hams who weren't even born back when AM was displaced
by SSB!

The thing to do is not waste time and energy on the naysayers and code
haters, but instead to project a positive image and improve the
visibility of Morse/CW. There are plenty of hams and prospective hams
who simply need to be shown.

How many prospective hams have ever even SEEN a real live CW station
and operator in action, with a coherent explanation of what's going
on? Too
few, in my experience. That can be fixed, though.

Part of your realism seems to be that you believe that CW doesn't have
enough merits to survive in competition with the other modes. I think
you are wrong. Do you think forcing a code exam upon Carl would turn
him into a code lover? If so, you are not a realist at all. Things
that are forced upon people are often hated with a passion. Why you
prefer vinegar to honey is beyond comprehension.

If YOU know who is doing the jamming via "common knowledge", etc. why don't you report
their activity to RH? What they are doing is certainly illegal, and if the control ops also "know"
who it is, then they are liable for not taking action to stop it. That's what control ops, club officers, etc. are for. Actually, they could be severely questioned and/or held responsible for
NOT trying to get it stopped.

That sort of stuff is not tolerated around here on any frequency. Any such "doings" will get
a ham "posse" together pretty quickly to DF the interference. One of these was actually quite
funny. One night around 9 PM, a dead carrier came up onto the 145.35 machine and remained
with the television clearly audible in the background. Eventually, we began to hear snoring as the "perp" had gone fast asleep. We DFed it to the home of a ham who had laid his mike on the arm of the chair. At some point, it fell down beside him, and when he changed position, he
mashed the mike key. It was completely unintentional, and we were laughing amongst ourselves
as the hunt progressed. This man was very redfaced when he was awakened and told what happened.

Another one was concerning those "export" and so-called "ten meter" rigs. There was a CBer
on the west side of our town that was taunting, even mocking, the hams up on 28.610. Several
hams, being new and unfamiliar with DFing, had tried to find him without success. They called me and asked me to try my luck. They thought, in fact, that they had the correct house and wanted me to verify it. The CB guy even bragged that "y'all can't find me". I drove out to the
house the newbies thought was it, and confirmed that it was NOT the correct address. I then
followed the signal simply by attenuation. I drove right in front of the perp's house, and the signal stopped (hmmmm, I guess he saw my screwdriver antenna on the car). We haven't heard him since.

I do hope that the info concerning FCC's approach to the illegal equipment targeted towards
11 meters is true. It is high time at the interference and actual "bandit" operations up on 10 meters is dealt with.

That's a wonderful idea, Cecil. You should go down right now and tell
authorities about it. Have lots of sharp objects in your pockets when
you go, and wear a hat made of aluminum foil.

I hate to say this, Carl, but I think you have just put
one foot into the same licensing quagmire the code-test
folks have been wallowing in for years.

Any "incentive" licensing scheme, whether based on a
manual skill such as receiving Morse code at a given
speed or a technical one involving the design and
development of electronic circuits, is basically
arbitrary and capricious. It forces every licensee
to conform to a rigid set of requirements based on
what someone, somewhere, with their own agenda, decides
is good for the country and its citizens.

The "Basis and Purpose" clause in Part 97 is, in my
opinion, the hoped-for outcome of granting licenses
to amateur radio stations and operators, not a set of
requirements that have to be met on a case-by-case
basis. The language used in the clause is so general
as to apply to just about any degree of self-training
that occurs under its auspices. And that generality

is not resolved in the remainder of the Part, unlike the very specific language concerning operating frequencies, power output levels, spurious emissions, etc. that is present in abundance.

In my own opinion, somebody who wants to get on the air with the one-tube transmitter he built as a teenager back in 1938 is just as much deserving of a license grant as another who is designing and building state-of-the-art digital communications systems. Each, in their own way, self-trains and advances the radio art.

Actually, we're saving up for one. For the moment we just pump the water into the tubs and rub the clothes together with our fists. It isn't really too unpleasant except in the winter. I'm a little nervous about buying the washboard for fear the neighbors will become envious and think we're showing off.

It's "Martti" as has been pointed out to you before (selective memory?)
and you added material about his being rich, which he wasn't and isn't.
That was also pointed out to you.

> Outside of
> running the DXCC. It was not meant to detract from his good deeds. I just
> didn't need to hear how a VP of Nokia lives in a low income neighborhood.

After stating that I am "a Marty Laine apologist" (selective memory?)
you did detract from his "good deeds". You were never told that he
lives in a "low income neighborhood" (selective memory?); you were told
that he lives in a middle income neighborhood. You were also told that
he didn't always work for Nokia, that he was, during a large portion of
his DX travels, in the employ of OH2BC at a company called Mikrolog
(selective memory?)

> Selling contacts. Welp Dave, just the other day Steve made a little slip
> about "charging for a contact."
> This idea is so pervasive that even people
> whom you think are knowledgeable about DX think it. They have to retrain
> their common senses to reconcile Part 97. Its unnatural.

He also correct his statement. Maybe selective memory caused you to
forget. Don't let it detract from your original rant about what you
perceived to be money for QSOs.

"Selling the mode" is not a fraud. It simply that means that you're lazy
when it comes to doing it to prove that morse code is a viable
communications mode. You'd rather have welfare-like support and, in essence,
have the government do what you're too lazy to do.

writes:

>Is there such a silencing?

A direct attempt was made on 25 January 1999. That is public
record in FCC archives. It did not work.

>You've certainly had more than your fifteen minutes of fame here.

Oh, is this a "timed activity?" Is "authorization by credential"
needed to engage in free speech? :-)

>I've said it before: Say what you want. Just
>don't expect folks to fawn all over you in agreement with you.

Nothing like that expected. :-)

Interesting that those who make such comments hold up a
mirror looking at themselves when writing such statements. :-)

>You've had your say. No one is obliged to give your views much credence
>or to give a big "Hurrah for Leonard H. Anderson!" in response.

:-) ...look into the mirror...look deep...you are becoming silly....

>Getting into amateur radio has been largely made easier than ever.

Has it? There's not much common agreement other than today's
newcomers are demeaningly labeled with everything from "extra
lite" to "CBplussers" to, in Heil's specialty, BEGINNERS!!!! :-)

Yes, join the ranks, The Strong, The Proud, The Amateur Corps!
Stand at attention while the long-timer Dill Instructor struts in
front of "recruits" with swagger key tucked under arm extolling
the Virtues of Rank, Obediance, Discipline, the TRADITION OF
THE CORPS! The Morsemen are Your Leaders and all Shall
enjoy as They enjoy...whether anyone likes it or not!

ALL WILL DO AS THEY DO! :-)

Of course that is an exaggeration, but it is not far from the
implicit meaning of so many long-timers. It is not a pretty
picture to others yet it is taken as a "masterpiece" to
themselves.

>... Your purpose isn't an amateur radio license.

My purpose in this newsgroup is to argue for the elimination of the morse code test for an amateur radio license. Stated before, stated again.

That purpose has continually been clouded, obscured by artificial smoke from a certain group of long-time Morsemen who DEMAND that all DO AS THEY SAY!

Those long-time morsemen have NO authority and no special "right" to demean, belittle, or attempt humiliation of others who do not share their views. They still continue. They do not die for their ego gives them everlasting life.

>Your hobby is haunting this newsgroup.

Ghosts know about haunting. I am an optimist and perhaps too much the idealist to think that human beings can engage in rational discourse on subjects, looking at many sides rather than just one. My fault.

In article <3C7C728C.1208106@earthlink.net>, Dave Heil <k8mn@earthlink.net>
writes:

>Gee, that isn't even close to correct, is it, Lenny? The thread (some
>four or five years back was over whether the U.S. government was using
>morse. I commented on that idea and explained that the Department of
>State used CW as late as the late eighties/early nineties. It was a
>fact. I was there. I used it.

Incorrect. Heil first stated that the idea of using morse on a teleprinter
circuit was his idea. He later changed that to "procedures for
synchronizing" without specifying what was synchronized. Finally,
in the last go-around of that he stated that it was "State Department
Procedure."

>That you casually dismiss my statement as false is asinine.

Nothing was "dismissed." My opinion, stated in the original
thread, was that such a procedure was "dumb" based on existing
procedures on radio-teleprinter circuits used by the US military
and commercial services established decades before this
innovation. There is no stated technical necessity for doing so
and in this go-around Heil is shrouding the matter in "security"
as a justification. Good smokescreen. Such cannot be
proved or disproved for "reasons of security." :-)

>... At no time did I mention my "importance" and if USG
>security bothers you, take it up with your congressman.

As I've tried to point out to Heil before, hundreds of thousands
of us have done the "security" thing in regards to classified
documents. That is commonplace, a fact of life, important to
national security. It is not some "special activity" exclusive to
the Department of State.

>...as in, "I am interested in taking up oil painting but perhaps I'll
>postpone it for forty years". If you aren't interested in what hams do,
>you probably aren't interested in amateur radio at all.

? As an artist-illustrator with natural talent and professional
experience in other media as well as oils, this is a puzzling
analogue. Artists are not licensed by the federal government for
either amateur or professional art activities. The only possible
link can be the very tenuous fact that Samuel F. B. Morse was
an itinerant portrait painter before getting involved in telegraphic
communications. :-)

>There are numerous areas of interest within amateur radio.

Agreed.

>You need to become a ham to become a participant.

No, no, no. Authorization to TRANSMIT RF energy requires
grant of an amateur radio license to be a lawful participant.
Everything else can be done by unlicensed-in-amateur-radio
individuals.

>Those who are up on the latest technology can do the same things if they
>like. Their ham tickets permit any number of activities.

Be consistent and aware of federal regulations. Radio amateurs
are NOT AUTHORIZED to engage in deliberate transmission of
RF energy outside of amateur bands through their amateur license.

>You've never done anything in your life "24/7" except breathe.

...as I said before, calm rational discourse is not a quality of
Heil's correspondence. :-)

writes:

>You've never done anything in your life "24/7" except breathe.

Heh heh heh...thus is demonstrated another calm, dispassionate
discourse...

>You can't operate on the ham bands sans license.

Untrue. See which bands are primary or secondary in allocation
in Part 2, Title 47 CFR. See also Parts 15 and 95, same CFR.

>You remember, that "interest" of yours which goes back decades.

"Interest" in radio need not be confined to just amateur radio.

>> Is that "stupidity" or is Heil engaging in yet-another insult fest?
>> I vote that he is a fest.
>
>> The word "interest" does not show Lust or Craven Desire or anything
>> else. The word has no specific gradation.
>
>Decades, Len? Decades? You've farted around here long enough for even
>the slowest of the slow to obtain an amateur ticket.

My purpose in this newsgroup has always been stated simply
as arguing for the removal of the morse code test in amateur
radio licensing. Since the PCTA have never yet made but one
reasonable case for the retention of that test, many seem to
fall back on the false charge of personal vindictiveness on the
basis of "never having passed, or been able to pass an amateur
license." Such a charge is false, bogus, a smokescreen for
not having a viable counterargument for retention of the morse
code test.

The charge that one must be "credentialled" with an amateur
radio license in order to discuss getting into amateur radio at
all is absurd. Radio communication is not exclusive to
amateur radio nor are the arts of radio communication solely
determined by amateur experience, techniques, or
accomplishments within a specific amateur activity.

>Okay, Walter Mitty, you're BRAVE. If you're brave, stifle that twitch
>in your breast and go forth and obtain even a no-code ticket.

That is an immature "challenge" based on the bogus "necessity"
of "do as we did or shut up." It is the primal fraternal order

emotionalism syndrome on the edge of going bananas.

Heil seems to need constant reminders that the FCC does not need credentialism of fraternal amateurism in order to set the regulations of US amateur radio hobbyists nor is it allowed to seek comment on those regulations solely from amateurs.

The necessity for an amateur callsign to discuss primary policy of getting into amateur radio is just bogus, false, irrelevant.

>Aaaaaah, let me show you how to fold your Nazi stuff before insertion,
>Len. Your use of it makes you look small.

Does it? How does Heil feel about his own image reflected right back to him when he uses the same tactics?

>I'm great on shrouding, Len. The Department of State makes us shroud.
>I was told not to reveal things to just any inquisitive clod on the
>street. I think they meant you. The remainder of your rant is evidence
>of mental imbalance on your part.

"Mental imbalance?" If so, there are hundreds of thousands of us in aerospace and government agencies who have ALL had to follow the same laws and precautions regarding classified material as State. The Department of State has no exclusivity on that matter.

>I don't care if you call or write State, Len. They're quite used to
>getting quizzed by fruitcakes. I know you "challenged" WHAT I WROTE IN
>THIS NEWSGROUP. If it wasn't for this newsgroup, I'd have NO CONTACT AT
>ALL WITH YOU. Ask yourself this, Leonardo: What reason would I have to
>manufacture material stated in this newsgroup? Would it change the
>outcome of the code debate? Would it gain me riches? Would it convert
>numbers of "code test haters" to my way of thinking?

Heil's primal reason seems to concern his ego. That is a common syndrome in computer-modem communications, to win "message points" however possible, make yourself look superior.

>Hell, Len. YOU belittle those who don't share YOUR viewpoint and you
>aren't even a ham! You aren't a grain of sand in the hourglass of
>amateur radio.

I present opposing arguments to certain amateur radio regulations and their retentions, trying to stay on the subject. All too often those who "reply" do so on my person instead of the subject. In some cases I will "return fire" in a like manner to those who insist on attacking the messenger instead of the message. That invariably results in cries of "outrageous objections!"

One of the extreme cases of this is a current subject thread supposedly identifying myself but is an exchange between two others in a heated fashion. The originator of that other subject thread feels "perfectly justified" in everything he says, does, or thinks and will not back down. He is an extra class licensee

with a one-by-two callsign.

Heil is an extra class licensee with a one-by-two callsign.
Except for the names, there seems to be little distinction
between the two.

That seems to be the basic reason behind the beligerant PCTA
group. Carroll is one of those. It shines brightly through nearly
every "message." :-)

What makes it all so ludicrous is that the beligerant PCTAs are
not in agreement. They differ markedly in "reasons." They
cannot understand that others see them differently from how
they see themselves, therefore they have no cognizance of the
clearly-stated difference in "reasons" for keeping the code test.

The only near-common "reason" is "You have to do as I did!"

Not a good reason.

This is exactly what FISTS should be doing - more agressive selling. I don't see why any pro-coder would have an objection to an organization such as FISTS having a program where you could get a 13 or 20 WPM certificate. Yes, it would be worthless as far as the FCC is concerned, but they would then have their "real" hams to tout.

Why is it that there always has to be some smart-arse Brit chime in and say that Yanks really don't speak/write English? We communicate in the same language as you, albiet with variations, but it's still English. Canadian French is different from that spoken in France, but it's still called French. Ditto Mexico and Spain. However, English is supposed to have a different set of rules, according to wankers like you.

Certainly not ... my point is just that you really don't know what I'm doing, or where ... I haven't seen you in my shack, peering in my windows, at the same locations where I travel to, etc.

In fact, I believe you live many states away from me, so how could you POSSIBLY monitor my activities, even if you were so inclined?

Thus, you really don't have a clue what I'm doing, or where.

(I know this is too logical for you to understand, having seen you struggle with some of the more elementary examples of logic presented by Cecil, so I really don't expect you to get this either, but I just thought I'd set the record straight. End of discussion on this matter ...)

Attaining 13 or 20 wpm is a real demonstration of a real skill and in doing so,
a ham does demonstrate worth to himself or herself and to the Amateur Radio
Service. It certainly can form part of the worth of a "real ham."

Many people enjoy getting certificates to commemorate their accomplishments. I
wouldn't expect Morse code proficiency to be any different.

Dick ... you really don't read well, do you? I said that ALL stations
in the group were reporting ALL others as S9+40+ ... in other words
ALL stations had WAY beyond "solid copy" of all others ... on its
face, that certainly implies that they were running more power than
necessary to accomplish the communications.

> Those of us with extensive HF background

Bla, bla, bla ... Dick you suffer from the misconception that
I have little or no HF experience. Many years ago, I was
designing HF equipment and systems for military use, with
several different, wellp-known companies ... one of which was
Rockwell-Collins ... you HAVE heard of them, right?

Have you ever designed a nation-wide HF voice and data
system for an entire COUNTRY's government? I have.

Don't try to preach your "superiority" to me ... it doesn't square
with reality.

Okay, I cede the point.

I think that a ham who rote memorizes over 300 questions in a question pool three times can be deemed to have met the unwritten "work ethic" requirement.

Most hams, though, probably pass the tests the same way I did -- with a combination of learning, memorizing, lucky guessing and hoping that not too many of the tough ones appear on the exam they get.

Dick, not all "oldtimer CW supporters" are "stagnated in the
distant technical past" ... I admit that freely.

You have a way of twisting things that I (or anyone else who
doesn't agee with your agenda of mandatory Morse testing)
say.

Such a program already exists, and has for years. The ARRL Code Proficiency
Program offers certificates and endorsements in 5 wpm intervals from 10 to
at least 40 wpm.

This program goes back many decades.

Kind of confused by this one (the following). I have received many QSL's
from DX that I did not originate (I did not send them a card first) so what
makes receiving a card from a eQSL log any different than a paper one ??

Come on people eQSL are the way it has to be done going forward into the 21st
Century.

Ron

"eQSL does not do this. eQSL receives a log and immediately makes
cards available to all stations in that log without checking the
information the other station has in his log or on his QSL. This
is not acting as a QSL Manager; this is just plain presumptive
QSLing. It is not adequate that the receiving station look at
the QSL and confirm it. How many do you think will refuse a QSL
from a really rare one who put the wrong call in his log so the
eQSL went to the wrong person, or if the signal reports don't
match, etc? There is no independent check here, thus eQSL is not
performing the duties of a QSL manager, thus the eQSLs are not
accepted by ARRL.

Dick has this supernatural ability not only for remote viewing
through space, but remote viewing through space-time. He was
nine years old when I memorized the stuff for the Conditional
exam. Yet he somehow knows and is certain that I didn't memorize
the material.

Here is how I see it, and if I am wrong, I am wrong. I am new to the
amateur radio community. Ok, the FCC needs to crack down on the
"export" rigs, and the companies that manufacture radios that can be
too easilly modified to operate out of band. They also need to crack
down on the makers of the amps that these fools love to use i.e.
davemade, x-force ect. At the same time, there are hams out there that
are also partaking in these activities, they should also be held
accountable. Same rules apply to all, and amateur radio is a self
policing group right?

I think my present woman thinks its quite interesting. she likes to listen in on my receiver occasionally and does find the 2m conversations rather interesting though Im not sure its for the right reasons!!. I think she sees herself as a bit of an armchair amateur psychologist!!.

Anyway,when she first saw my erection she was gobsmakced and thought it most impressive. Even now she is rather in awe of it and it has given both of us a great deal of pleasure..

February 1958 - - Good evening Sir and how is the family

this evening? It was Al on the radio, a friend of my

dad's on 20 meters. Pretty good Al, and did Mike tell you the news? He passed his General class test today at the FCC office.

Gentlemen, can we make an announcemet on frequency? Go ahead sir. My son Mike passed his General class test today and is already studying for the advanced. Multiple congratulations

from hams around the country came in on the old National NC-303.

Mike had passed his General earlier today at the FCC office before a FCC examiner in a suit who knew as much or more than Mike about the various schematic diagrams that Mike was required to draw and explain on his General class test.

Mike's big brother Tom, fresh out of the military in the field
of communications intelligence and with a college degree and a ham ticket himself had recently been hired by the FCC in another office.

In times of emergency and during public demonstrations of ham radio, the press and local government viewed the amateur service as sophisticated communicaitons professionals who spoke professionally and with the utmost of courtesy to each other on the air.

Hams used "handles" but also called each other "Sir" and "Gentlemen" Theirs was an exclusive fraternity with its own stiff entrance requirements.

Traffic nets handled tens of thousands of pieces of "traffic" for overseas U.S. military personnel, free of charge.

The Old National NC-303 and the Viking Valiant were my passport to world adventure as I grew to know hundreds of ham operators around the world and the U.S.

"YOU FUCKING PIECE OF WHITE TRASH! YOU MOTHER FUCKING QRMer YOU BASTARDS ARE QRMing TRAILER TRASH! FUCKING PSYCHOS WHO FUCKING JAM ALL DAY"!

Ahhhhh,,,, ohhh what is going on? Ohhhhh, I was sleeping. I had dozed off and was dreaming. It was NOT February 1958, Fast forward 44 years! In reality it was February 2002 and I had dozed off, leaving the solid state ham rig tuned to 14313 and an operator mobile in Atlanta, a regular on 14313, was in an argument with

several
other hams on 14313. He was accusing one particular ham in Florida of
running a "QRM Gang" whatever that was? Ohhhh, yes, I WAS
only dreaming. Ham radio, circa 1958 is gone forever!!!!!

I, too, find myself in the "ex" catagory. Like your ex, my wife always referred to my radios as
"all those 'dumb' radios".....most particularly the ones in the car. She even made me put my
radio station in the closet! I built a desk that would just fit in the closet in our den, and allow the louvered doors to close. This way, when we had company, she could close the doors and
hide those "awful" radios! LOL! Seriously, it worked out pretty well because, with the doors
closed, you wouldn't even know I had a radio station. When she borrowed my car, she would
make me take the antennas off.

She was only half serious about the radios, tho, I found out later. No, she didn't like them at all, but she tolerated them, and actually enjoyed putting them down. It got better during the time I was working out of town. Every Friday night, I would start home and get on the HF
mobile and talk to my friends, or check into various nets. I arrived home one night and she had
forgotten to turn it off. I went into the den, and saw the HF was on, and I wondered out loud
why. She looked like a Cheshire cat caught in the "act" of eating the pet bird!! Even though she razzed me about how "useless" my radios were, she had been listening to me on the drive
home from Atlanta, GA every week! It was her way to see that I was OK, and not in a wreck;
as long as I was talking on the radio, she knew all was well. It was my turn to razz HER! LOL!

You still don't read very carefully, Larry. I said you *thinking* you can
dictate the way I should behave--not that you are.

Holding my feet to the fire? Doesn't that imply that I should somehow be,
what?, embarrassed, humiliated, what Larry? You are far from "holding my
feet to the fire."

No question. Illegal is illegal. And if hams are aiding and abetting
illegal activities, then they
should have to pay the piper as well. I don't cull 'em out when it comes to
what's right. I truly
hope to see the makers, the sellers, and the users getting busted for it.

I, for one, am fed up with the activities on the low end of 10 meter and down on 12. Every one they smack down
is a victory for Amateur Radio, IMHO.

Aggressive doesn't jhave to mean "in your face" selling.
I suspect Krell was implying being proactive rather than
passive in support.

Cheers,
Bill K2UNK

Then FISTS, the ARRL, or any PCTA types should be pushing these endorsements
if they want morse code to endure. They've depended on welfare support of
the mode via code testing, and now it's time to work for it.

No, thetas what YOU are saying. I'm saying what I always have said-
Without the code test almost no one today will be exposed to its merits.

> Your saying that is NOT a very good
> endorsement for the mode, Dick.

That doesn't make it inaccurate.

Jim, thanks for the post. I am looking forward to the rest of it. Yep, I remember everthing above 30 GHz was legal territory, although it would have been a real bear of a problem to generate any measurable power (likely microwatts) and the receiving systems would have been noisy indeed. Usually just a mixer up front on the microwave bands as I remember. A 4 dB noise figure was pretty good on 440 MHz back when I was first licensed (1962). One local guy built a 440 transceiver - complete with 1 tube. Superregen on receive. Good for a couple of blocks - maybe half a mile if you could find someone to talk to. Yepper, on 160 as a general (later an extra) we had 1.8 to 1.825 plus (I think) 1.875 to 1.925. On one of those two 'bands', we were limited to 25 watts (at least here in Rochester, NY). I think the limit may have been 75 watts on the other, but I was running a Johnson Ranger I and only could muster 75 watts CW and 65 watts AM. Ah, you brought back some memories! Looking forward to the other parts.

73 from Rochester, NY

From the looks of things ham radio iteself can't surive on its own merits. It
keeps
being downgraded so that it will "attract more new hams".

Yup. In fact, some folks say that one of the FCC's driving forces in pushing "incentive licensing"
was Sputnik fever. The FCC first started asking questions about how to get more hams to
upgrade beyond General in 1958.

All depends on who you ask. Some folks think we're in the radio "Dark Ages"
because we still do things like dedicated repeater pairs.
>

>The object is not exclusion but education.

AMEN!

And Education includes a whole bunch of things - not just the purely technical.
How to conduct oneself on the air without a lot of formal training, procedures
and Enforcement is part of Education.

>Removal of the Morse
>requirement is a sea change not because of the mode but because it is the
>only part of the exams that requires the testee to actually DO a damned
>thing and for that reason alone will harm or at least change the Amateur
>Service.

I suspect that you have hit upon the very reason the Morse/CW test is so
hated in some circles. Except for a very few who have learned the code

elsewhere, most prospective hams have to start at dead zero and learn it from the bottom up. Functions as a Great Equalizer - and some folks really hate that.

>I suspect it will have the effect of making it far more a
>talking shop than a think tank where fuzz like 'legacy modes' gets kicked
>around like it really meant something.

Some folks predicted (not promised, predicted) big technological changes from the dropping of the code test for Techs back in '91. Yet we're still running early 1980s-style packet and mid-1950s style FM as the two most popular modes on amateur radio above 50 MHz. "They gave a revolution and nobody came".

Why would the Chief have to hear you say it, if you have established that
hams get messages through correctly?

Obviously for short-range tactical communication in a situation like that,
voice
is probably more practical than Morse or any digital mode.

Sounds like you don't have much confidence in the ability of hams to get a message through without someone looking over their shoulder, or through the use of nonvoice modes. Even asking the questions you ask indicates that you doubt the "savvy" of the hams involved, or of any nonvoice mode.

Carl and Brian Burke are newcomers? After 25 years of being licensed?
You know no one
called newcomers names, in fact I specifically stated that no newcomer
can be blamed for the fact that he can pick up an Extra class license
while knowing virtually nothing about ham radio, but you just like to
troll, troll, troll,.

I read it. You *ASS-UME* that all stations have bla bla bla. You assume a lot
of erroneous things, and this is no different. You make your version of how it
should
be for all hams, with no regard to facets about which you may not have full
information.
This is not new, you've done it all along.

>rrap?

Ed:

Oh, I grasp that concept, all right. In fact, I rather suspect that rrap is way down on their list of things they don't give a rat's butt about -- like the future of the ARS, among other things. If it were not so, perhaps they'd pay closer attention to the opinions being expressed here.

>Maybe you are the one that Dick feels rote-memorized his way to an Extra.

Ed, I'm here to tell you right now that I "rote-memorized" my way to virtually every academic achievement I've ever made in my life -- except the Morse code tests I took to become an Extra-class radio amateur! It just so happens that when you "rote memorize" something, you've learned it! Do you have something against learning? How does one learn the FCC Part 97 Rules and Regulations without "memorization" of same? If you have a problem with anyone who is against "rote memorization," don't look at me -- because you'll have the wrong man.

>As to the rest of your post, it degraded into near-meaningless buzzwords and
>gibberish,

Which only an ARRL HQ employee would so easily recognize...

>so it is not even possible to give a rational response.

...which is what people usually say when they cannot respond.

>Is this

Kim:

Kindly explain how anyone can "make" anyone else commit the crime
of rape. And if rape is not a sexually-based crime, what would it be
then? It is both a sex-based crime and a crime of violence; the two
are not separable if the definition of the crime is, in fact, rape --
unless you're referring to grape pomace or a mustard-like herb of
the Canola family.

>way they do without the ham radio forum.

Oh really? Find one person with whom Dick, Dave, or myself has had an on-the-air QSO and "acted" like we do in this newsgroup, and get them to provide verification -- if you cannot, or will not for any reason, then you have just gratuitously slandered Dick, Dave, and myself -- thus proving that you're no better than you claim we are.

> In fact, it is the ham radio forum
>that gives them the only soapbox they feel they can step up to, is my real
>suspicion.

Don't look now, Kim, but that's one of the things a Usenet forum is there for -- to serve as a "soapbox" for individual opinion. You use it in the exact same way.

> newcomers are demeaningly labeled with everything from "extra
> lite" to "CBplussers" to, in Heil's specialty, BEGINNERS!!!! :-)

That must come as a shock to you that beginners in amateur radio would be labelled "beginners". At least you won't have to suffer the horror of being called a "Novice".

> Yes, join the ranks, The Strong, The Proud, The Amateur Corps!

If someone asked me to describe you, the word "optimist" would be one of the last to come to mind. I'm afraid I'll never be able to think of you as, "Lenny the optimist".

> code test.

I'll go you one better: "Never having even attempted to pass". It isn't a false or bogus claim. The claim is quite true. The question which begs a real answer is why a seventy-year-old man with no interest in obtaining an amateur radio license would concern himself even slightly in the regulation of amateur radio?

> The charge that one must be "credentialled" with an amateur
> radio license in order to discuss getting into amateur radio at
> all is absurd. Radio communication is not exclusive to
> amateur radio nor are the arts of radio communication solely

> accomplishments within a specific amateur activity.

You've discussed, lectured, preached and railed here for years. You've garnered few supporters but you have managed to honk off greater numbers. I maintain THAT is your real purpose. You enjoy generating controversy here as a means for filling your empty hours.

> >Okay, Walter Mitty, you're BRAVE. If you're brave, stifle that twitch

You'd certainly know about what you describe, Len. My telling you about government use of morse was not to stroke my ego or win some of those invisible message points you keep babbling about, it was to counter claims of others that government was not using morse.

> >Hell, Len. YOU belittle those who don't share YOUR viewpoint and you

Not quite right. The above is PAST TENSE for "CW/Morse" by about three decades in the US military, at least two decades in the commercial radio field.

>But both the military and commercial communications folks have long
>been reducing/eliminating their dependence on radio operators. Not

>just Morse/CW ops, but the whole idea of a person whose job is specific to
>operating radio sets. The Navy, for instance, no longer has the
>"Radioman" classification at all.

This is NOT quite true for the US military. The synonymity of
"CW/Morse" and "radioman" disappeared/evaporated before 1970.

The sole exception in the US military is the MI, a very small group
service-wide, service-total, passive ELINT (ELectronic INTelligence)
specialists PART of whose task is interception of communications.
Training in that rare specialty is done at Fort Huachuca, not only for
all military branches but civilian government agency personnel.

That NAMES of Military Occupation Specialties have changed is
not the issue, the ACTUAL SPECIALTY has changed. Operation
is no longer of "radio sets" but rather radio/telecommunications
SYSTEMS.

AEGIS is a good example of a true SYSTEM, a weapons system
requiring dozens of specialties in radar, computers, misslery,
electronics, tracking and ordering, electronic warfare and
identification. It is not the motion picture symbolism of the old
rotating radar set and operators with grease pencils and chest
telephones. It is more modern, appearing more (to a civilian)
like a video game arcade in operation. The difference is that
this "game" is REAL and the player can LOSE by obliteration.
AEGIS first went to sea on trials in 1973, was operational with
the USN by 1980. That is 22 years ago.

You may obtain information on that and all the military
occupation specialties in the Army, Navy, USAF, and USMC
by simply linking to www.army.mil, www.navy.mil, etc. Just
follow the links for "careers." For army MOS, you may get
more detailed information via www.goarmy.com/jobs/index.htm.
The US Army has 212 MOSs but does include "radio" in a few
of their titles. The USAF prefers "avionics" or
"telecommunications" rather than "radio" and the USN seems
to like "electronics technician."

If you wish to SEE and read detailed technical specification on
radio-telecommunications, you are free to do so at
www.adtdl.army.mil/atdls.htm which is the Army Doctrine and
Training Digital Library. Click on "Library" and select "signal" to
see the available documents. Field Manual FM 24-24 is fully
open for viewing and/or downloading to see all the land force
manpack-through-vehicular-to-trailer systems. It is dated as
released four years after the end of the short Gulf War.

>It's pretty obvious that the FCC, for whatever reasons, wants to

>since 1975 - it's nothing new. Now the only thing keeping the
>one remaining test in place is S25.5, which will almost certainly

>not remain after WRC 2003.

That is supposition on "ASAP." The FCC's "reasons" have been very public since 1990, 12 years ago.

It is supposition on "[S25.5] almost certainly not remain" but it is likely. Note that the US preliminary proposal dated 30 November 2001 indicates a revision of S25.1 through S25.6. There is change everywhere. It is best to accept that some change will happen.

>Consider what has happened to AM voice. Back in the late 1950s and
>early 1960s the mode almost died out in amateur radio, pushed out
>by inexpensive SSB transceivers.

VOICE remained and VOICE quickly became the most popular mode used in HF amateur communications (verified by the famous or infamous ARRL "poll").

The TECHNOLOGY changed, but VOICE remained. Note that as well. The vacuum tube final was replaced by the transistor final in amateur HF transmitters under about 200 W.

I see nothing "inexpensive" about an all-mode HF transceiver that costs $1000 to $2500 for the basic box.

There is a distinct advantage to the combination of SSB and solid-state. It made ALL MODE modulation on HF more accessible to radio amateurs. This was difficult to do with the older double-sideband, unsuppressed-carrier "AM" transmitters.

Note: "SSB" is ALSO amplitude modulation or AM.

>How many prospective hams have ever even SEEN a real live CW station
>and operator in action, with a coherent explanation of what's going
>on? Too few, in my experience. That can be fixed, though.

There is nothing "broken" there. It does NOT need "fixing."

Museums are adequate for such tasks of "seeing." Such are good for displaying giant alternators, spark transmitters, and crystal sets as well...

Packet always struck me as being too close to auto-eroticism for my taste and while I have harbored thoughts of firing up a DSB vestigial carrier system with sync detection just to see if it actually could be done on 2 kHz channels as GE claimed when they lost the SAC job to Art Collins there is an element of so the hell what involved. My occasional forays to VHF remind me of when the telegraph line was completed down the Boston Post Road (US 1) and the last surviving Transcendental Poet (Longfellow ??) was informed that Boston could now talk to Florida, he replied 'But does Boston have anything to SAY to Florida. About thirty years ago Wayne Green asked for reports of intelligent life on 2 meter repeaters and got little or no response. Wish I could disagree but I remember the flap caused by a few docs and the local Federal Venereal Disease Control Officer getting clinical on our repeater (flap was some local radio cops, our machine was known for off the wall activities). If there is intelligent life Scotty, stomp the shit out of it.

All this technological wonderment is far more fun to talk about than actually do; glorioski you might be held responsible.

Oh well, it is late and depression is setting in.

>code test.

What is "false, bogus, a smokescreen..." is your assertions of "vindictiveness". This and other such vile attempts at demeaning the entire service are why you cannot make any "headway" with your ranting, nor even get a membership in the ONE organization that would seemingly promote your views.

>The charge that one must be "credentialled" with an amateur
>radio license in order to discuss getting into amateur radio at
>all is absurd. Radio communication is not exclusive to
>amateur radio nor are the arts of radio communication solely
>determined by amateur experience, techniques, or
>accomplishments within a specific amateur activity.

What's absurd is that you continue to think that you can make knowledgeable, informed posts without having an experience base from which to make those comments.

As has been acknowledged by many, myself included, your apparent knowledge of what's "under the hood" is seemingly satisfactory. (I am still not convinced that it's not a lot of well researched plagarism)

What's absolutely rediculous is your frequent attempts to appear knowledgeable on matters in which you clearly have no EXPERIENCE.

>Heil's primal reason seems to concern his ego. That is a common

Well, you'd have to ask her next time she's on one of the IRLP nodes :)

Though she does occasionally get a bit annoyed when I look at any metal object as a potential antenna...I'm still trying to figure out dimensions for 2m/70cm patio furniture so I can get something going outside our apartment. I'm seriously considering tracking down a plastic lamp-looking thing so I can disguise a copper J-pole as an ugly bit of decoration.

FWIW, most of the hams I know who have this sort of problem find that getting rid of the woman is quite a bit more productive than getting rid of the radios. Women who feel that sort of competition from inanimate object generally have other issues that you don't want to have to deal with.

From: Dave Heil k8mn@earthlink.net

>Oh, I'll look forward to hearing your Part 15 sigs on 20m.

That is a bit more prophetic than you think it is, Dave. Part 15 permits devices that unintentionally or intentionally radiate signals on 20 meters. If your local utility company decides to offer ISP-access power-line communications, using overhead power lines as the conductors to offer internet service to its subscribers, you may indeed hear a Part 15 signal on 20 meters, at a pretty substantial level.

We had very close calls with Home Phone Networking and HomePlug compliant devices, but the industry chose to include notches in the HF ham bands to a level about 30 dB lower than FCC rules would permit. This still leaves some potential for harmful interference, but is a major step in the right direction. Unfortunately, the access-PLC companies are not developing an industry specification and they have not responded to my letters of inquiry. Time to ratchet up the pressure, because if access-PLC technology is deployed at the level permitted by the rules, there will be a problem at hand for HF users.

All Part 97 frequencies are accessible to Part 15 devices, Steve.

On 3.5 MHz, a legal Part 15 device located at your neighbors house will create an S9+20 dB signal to your 80 meter dipole located 100 feet away from that legal source.

On 2.4 GHz, Part 15 devices can use 1 watt of power and a 6 dBi gain antenna, or can use a higher gain antenna, reducing power by 1 dB for every 3 dB increase in antenna gain. For 100 milliwatts, an antenna of 36 dBi gain can be used.

That gives an EIRP of 26 dBW.

Hell no! You know better than that, Ed. But, you're not the typical
ham either. (I know, Dick will say something like "define the typical
ham," but I think reasonable people understand the concept I'm
getting at.)

I am saying that at the "typical" (or below) level, there are many,
many long-time hams who have not kept up with technology in
any reasonable degree ... those who couldn't even do something
as simple as interfacing their computer to the radio for the various
digital modes, wouldn't have a clue what they did wrong when it
didn't work right ... might not even realize that it wasn't working
right and splatter all over the place, etc. Then there are those who
need help to figure out how to trim a dipole to resonance. The list
could be nearly endless, but the point is there are a shocking
number of licensed hams who are "way behind."

I see that as a problem (in my personal view) and I would (personally)
support some reasonable requalification testing at renewal ...
(remember, this is my personal view, NOT an NCI position at all)

Yes, some will say, "You support 'jumping through the technical hoop'
but not 'jumping through the Morse hoop'." Correct .. I believe that
the "technical hoop" if one insists on calling it that, is a
REASONABLE
one, because it relates to safety, interference, etc., whereas the

Morse
hoop only relates to operator mode use preference and a desire on the
part of some to avoid having to do their own "recruiting" on the basis
that some percentage of those who are forced to learn Morse will
probably decide they like it and will use it.

But Ed, surely you realize that Dick really doesn't CARE if you
passed your General test in 1964 by throwing darts at the answer
sheet, backwards, over your shoulder, with both eyes closed.
You can do Morse fast enough, and in Dick's mind, that makes
you a "real ham," regardless of ANYTHING else ... :-)

(you know I respect your technical competence ... my point above
is not to question that in any way ... just to point out that Dick has
made it perfectly clear that he really doesn't care about anything
but Morse ability ...)

>discourse with you.

I have found that some of those who disagree respect me. Like Bill Sohl, K2UNK, who is a model of "debating without berating". But I've also found that many others get angry and insulting for the mere fact that I disagree with them and point out factual and logical errors.
>
>Unfortunately, there have been too many insults to go around on both sides of

>I GUESS I SHOULD SAY THERE WERE NONE. GOOD F#$%&@ GRIEF.

What's the big problem? All I did was use YOUR logic on a similar area. Is
that wrong?

Obviously Morse/CW isn't going to be used much, if at all, when a
disaster/emergency calls for short-range tactical communications. Like
the WTC, Pentagon and Flight 93 attacks did. But all disaster/emergency
situations are not like those.

>> > I am not saying anything against the mode,
>> >its users, etc.

>different.
>> Like the ice storms in New York in 1997, or the hurricane stuff KT4ST is
>> involved in.

There - two examples of CW/Morse used by hams in an emergency/disaster
situation. And they're not decades old. Why don't they "count" to you?

You could look them up on google, y'know.

>I wish there were a way to statistically show how often/much CW is used in
>emergencies--and *not* using H&W, because I do believe there are some people
>who still use CW nets on NTS---those are *not* directly from the scene, not
>operational messages.

Why don't H&W & NTS count? Seems to me you want to limit the definition
to only those messages that fit your preconceived notion of "emergency" and
exclude all others and all other possibilities.

>Anyway, I am certain you are confused by my above sentence.

Not at all. It's clear that you want to exclude anything that might disprove
your
ideas. You haven't explained why H&W and NTS messages don't count. I
think it's clearly because counting them would disprove your claims.

btw, I have never claimed that CW/Morse testing was absolutely necessary
because it might be needed in an emergency. The way I put it went something
like this:

Is the possibility that a ham might have to use Morse in an emergency
situation so high that ALL hams MUST be tested for Morse skill? The
answer is obviously no.

> I give up even trying with you, Jim.

Because I won't simply knuckle under and agree with you. That's really
what it comes down to, I think.

Sadly, most of the present "technical" questions have little
or no relevance to the interference or safety issues in station
operation.

Any operator licensing test MUST justify its existence as
being necessary to protect the rights of other spectrum
users. Anything else is just a hoop to jump through, placed
there by someone with a favorite cause (or mode).

No now you're advocating that every facet of life (and ham radio) be enforced??
Change your mind?

> Who does the enforcement for "investing whatever it takes"?

The issuance of the license obviously takes care of that. If you found it to be
"trivial" as you have said, well boolah - boolah for you. I know that the vast
majority of applicants do not.

Wrong, as usual. It's not the "exams", it's word associations that remain
essentially
meaningless (to the memorizer) but allow a passing grade and a license to
result.
For all those who actually learn the material, hooray for you.

"Newcomers" and "newcomers to the Extra license" have entirely different meanings, as you
know. Welcome to a dumbed down Extra class, one that any REAL newcomer can just
as well easily achieve. It isns't anywhere near the accomplishment it once was, and you know that, too.

And how do you propose to expose Carl to CW's merits? Gag and tie him, and "force" him to listen to Gorden West tapes?

Ah, the code-free refrain, redux!

> What's the age of
> the average ham?

What is the increase in the life expectancy? Why shouldn't they offset? And if people who retire are attracted to ham radio, that fills the ranks just as much as recruiting kids (who by and large are totally disinterested in such a pastime). When we were kids most new hams came from our age group. That changed along the way for number of reasons, and I don't see it going back. There are just far too many interesting diversions today that we didn't have. They think they can contact anyone in the world on the Internet much more easily than radio, and no license is involved.

And the people who are never required to learn it for a test will not learn it.
So they will never learn to like it. And so they will never use it. End of story for
CW
Carl will be very happy, and one might hope that he finds himself stranded on a
desert island with only an ordinary HF SSB/CW transceiver with a defective
microphone.

When this proposal was in the NPRM stage I wrote my congressman to protest
(the only time I ever did that.)
After a time he wrote back saying the FCC had assured him that there was no problem

with the proposal, that all valid concerns had been addressed. Right.

The answer should be so obvious that it isn't even needed, at all.
As you well know, this isn't about me. It's about all those future hams
who will NOT be learning to use radio's most basic mode.

Another answer too obvious to be needed. No mode except CW requires
the self training that requires the self-discipline to complete that training
before
it can be utilized. The others are essentially plug-and-play. EASY!
But of course you already knew that.

It is a license, not a degree, Dick. All it does is grant
privileges. I, like you, met the requirements in order to
obtain the privileges. That's what all new hams are doing.

You, yourself, said Carl is a lost cause for CW, as are many new hams.
There were many older hams who hated CW - always has been - always
will be. What I am talking about is exposing new hams, who might like
CW, to CW's merits. Set up field day demonstrations - stuff like that.

Walking and bicycling are basic modes of transportation, yet skill in
neither is required for a driver's license. This just shows were some hams
are technologically, and where they're likely to stay.

Don't look now, but CW has also become "plug-and-play." With gadgets like
the MFJ-461, there's now nothing even to "plug."

I never implied otherwise. The point I'm trying to make is that is the
pro-coders want CW to endure, they have to do so without welfare support of
the mode via mandated testing at high speeds.

...and just what language(s) do you think English evolved from? Look at an
Indo-European chart sometime, if you know what one of those are.

People like Carl might not like it, so it's bad and we must do something
about that. Sounds like something that someone from the "land of fruits
and nuts" would say, Cecil.

> What is wrong with live and let live?

David Westerfield comes to mind.

You're saying that Larry is wrong then, Dick. Cecil agreed with Larry
about rote memorization. Why didn't you reply to Larry's post instead?

For all who do not recognize ENGLISH as the world's standard:

OVERHEARD AT THE FRANKFORT RADIO TOWER ON THE AIRCRAFT FREQ:

1. Plane trying to land asking for instructions in German was
given the reply, "You must use English to recieve instructions
from this control tower!

The plane's pilot asked why since he was in a German Plane, in
German airspace and coming from and land on German soil, why
must we use ENGLISH?

Before the control tower could answer, a decidely British and
American Accent both chimed in, "Because we won the war!"

RULE BRITANNIA, PAX AMERICANA and the highest standards of living
in world are to be found in ENGLISH speaking countries!

In America, we have a ROYAL SOCIETY CLUB, in Canada we have the
best hockey team and in the UK country music has a cult following,
why you ask, because of the ENGLISH LANGUAGE!

Martin N5PZJ

To stay on thread, yes my spouse tolerates my hobby and I tolerate her
hobby, ouch where did you find those knitting needles again?

My SCS PTC2e treats CW just like any other digital mode. It generates an
audio tone in SSB mode and keys the PTT line. It decodes CW a lot better
than I do.

In article <3C7DB2EC.C74B5AF5@earthlink.net>, Dave Heil <k8mn@earthlink.net>
writes:

>> >Those who are up on the latest technology can do the same things if they
>> >like. Their ham tickets permit any number of activities.
>>
>> Be consistent and aware of federal regulations. Radio amateurs
>> are NOT AUTHORIZED to engage in deliberate transmission of
>> RF energy outside of amateur bands through their amateur license.
>
>Stuff and nonsense! No such claim was intended nor would it be
>understood as such by anyone in full command of his mental faculties.

The technical regulations on spurious emissions of amateur radio
transmissions are clearly given in Part 97, Title 47 CFR. It is the
RESPONSIBILITY of the control operator to insure proper
compliance of their station equipment. Anyone (even in partial
command of mental faculties) can see that for themselves.

Except for the extreme emergency situations outlined in Part 1,
Title 47 CFR, no amateur radio licensee is AUTHORIZED to use
his or her station for amateur radio activities outside of allocated
amateur radio bands.

ANYONE in the USA, licensed in any radio service or not, may
deliberately transmit RF energy within the regulations set forth
in Parts 15 and 95, Title 47 CFR. For further definitions, see
Part 1, Title 47 CFR.

Has Heil read and understood US radio regulations as they have
been explained to him by the FCC?

>> >You've never done anything in your life "24/7" except breathe.
>>
>> ...as I said before, calm rational discourse is not a quality of
>> Heil's correspondence. :-)
>
>...but you made no denial.

Irrelevant. To state full details of a life experience falls into the
"CV" category which is NOT AUTHORIZED by another one-by-two
Dill Instructor in this newsgroup.

Having pulled as long a shift as 34 hours continuously, broken only
by meals, and been "on call" around the clock all days of the week
both as soldier and civilian, is not relevant to any discussion of
whether or not morse codes will live or die or the claimed superiority

of Department of State HF communications methods or equipment relative to the rest of the US government.

"Having an interest in radio" is not rigidly confined to marching in ranks solely to some martial music of morse or the religious fanaticsm exhibited in "my god-code is the only god" proselyte mantras.

RADIO, that generic word having come to mean all forms of wireless communications, embraces ALL of it, ALL techniques, ALL methods, ALL procedures. It is a huge field of activity, long ago become far bigger than all of amateur radio, including all licensed therein whether active or inactive in amateur pursuits.

To parade around extolling the "virtues" of amateurism or placing oneself high on a virtual pedastel of self-imposed "superiority" by certain achievements within amateurism is ludicrous as much as claiming that one must show interest in radio solely through entering amateur radio by acquisition of a federal license grant is pompous and arrogant. Such is also hypocritical to a perverse point, claims used solely to satisfy some imaginary "battle" of words that exists only in the imagination of the outraged claimant.

Some work in or use radio as just another tool in their work or activity. That is probably the majority of all who have access to any sort of radio. Some find a fascination in radio itself, its technology, its methods, all the various modes and its uses for all rather than a few. Some delve deeper to become interested in the design and theory of the electronics required to make a "radio" of most any kind. Academics and engineers are generally in that last category for nearly all of the new developments in "radio" over its 106-year existance have come from them. Their interest and fascination led to exploration of new ideas and trials to see if their ideas would work. Some ideas did not work, but some did. Some ideas that did work were supplanted by newer, better ideas. Such is evolution in the entire radio world, not just a part of it occupied by non-professionals.

Does "interest in radio" equate JUST to amateur radio? No, nor should it, in my opinion. Must "interest in radio" be "demonstrated" to a "community" by acquisition of a legal amateur license? No. Such is the self-imposed "requirement" of the fanatics, the ego-driven, the irrational credentialists who have confused a hobby activity done for recreation and enjoyment to some all-embracing lifestyle. The classes of US amateur radio licenses have changed from the time radio regulation first began in 1912. The whole purpose of a "license" is as a regulatory tool, one of many thought necessary by federal agencies. It is not an academic achievement certificate. It does not "qualify" anyone to transmit RF energy, it only authorizes them to do so.

Some discount all of the preceding even though it is established in the real world, the bigger world of all radio. Those who wish to say otherwise live in another world of fantasy contained in their imaginations and quasi-religious beliefs. They are gods. Mere mortals may not argue with gods. They are superior.

>Sadly, most of the present "technical" questions have little
>or no relevance to the interference or safety issues in station
>operation.

I have to take some exception to that. According to the question
pools, interference and safety questions certainly appear to
follow regulations.

FCC regulations in regards to test question content have changed
throughout the past years such that the VEC now have the
responsibility for the ENTIRE content of each pool. The only
FCC requlation is pool approval or disproval, the number of
questions per class, and the MINIMUM number of questions in
the pool. The question pool content is left to the VEC Question
Pool Committee.

I am told that the VEC QPC will accept input on the pools from
all. I cannot verify this, but that would seem the proper direction
to argue for changes to make them better.

>Any operator licensing test MUST justify its existence as
>being necessary to protect the rights of other spectrum
>users. Anything else is just a hoop to jump through, placed

Total agreement there.

Any radio operator license ever issued in any radio service's
activity by any US radio regulatory agency was always just
an authorization. None of them were academic or skill-
achievement certificates of "qualification."

Too many have regarded the various license classes as
certificates of achievement...and that includes the ARRL's
statements and advertisements implicit statements. That
is an artificial construct.

>>ARS from behind closed doors difficult."
>
>One could, if that one were truly convinced that "they" were out to get him.

To be honest, the PERCEPTION of many, licensed or unlicensed, is that the ARRL has controlled most of the past of the ARS from a decided minority group that is NOT required to be accountable to either the membership or non-members.

The ARRL is a private organization and does not have to follow the governmental rules and monitoring of elections or open records-keeping. While the ARRL has a quasi-governmental structure and claimed "representation" of the ARS and "democratic principle" elections and "openness in BoD meetings through publishing minutes," the only output comes from the ARRL itself. Are there independent, disinterested witnesses to all this "openness and honesty?" All I've seen over the years is what the ARRL says it does. There are NO independent checks or balances; the ARRL says it is honest and aboveboard and all must take them at their word..

The ARRL has achieved a monopoly on amateur radio interest publications in the USA. Not an absolute monopoly but one of being the major source of information, at least two-thirds of all all available English-language amateur publications in print. The periodicals are self-sustaining through advertising fees despite claims that QST is merely a membership service benefit.

Before the opening of the Internet a mere decade ago, the ARRL acted as an intermediary for its membership (then only about a quarter of all licensees as it is now) in relations with the US government and especially with the FCC. That was useful since government was very large and direct communications with the government was difficult. The ARRL had become a de facto Big Brother, a claimed ombudsman. It was very difficult for individual members to verify if the ARRL actually DID what it said it did. All were expected to believe that the ARRL was honest because the ARRL said they were honest. A Belief

existed and skeptics were scoffed at, ignored by Believers.

The Internet brought a true Revolution as well as Revelation to all who had access. Governments now had databases available on-line, including Comments and Replies on NPRMs. No one had to travel to DC and go to the Reading Room of the FCC in order to see documents nor did they have to be a lifetime subscriber to the Federal Register or GPO customer. Governments even accepted comments from individual citizens and did not need attorneys to represent them. The FCC made public over 2600 Comments on the 98-143 NPRM, all available on-line around the clock.

The ARRL has a large website, too. Many sources of amateur radio information are available for free, but nearly as many are also available ONLY to members. That same website has continual advertisements paid for by others and for ITSELF. It is an ideal self-promotional medium and the ARRL never fails in such self-promotion. Competitors in publications are featured only if the ARRL stands to profit by resale of such products. The implications of altruism have become tarnished.

While I cannot do a full search, the open part of the ARRL site and their publications seem to ignore other organizations. The Radio Club of America was formed in 1909 and continues today yet it is ignored even in casual mentions. That is just one small spot of oxidation, a tarnish that disturbs the gloss.

The ARRL membership is still not above a quarter of all US amateur radio licensees, yet the ARRL still implies that it "represents all amateurs." The ARRL has had a record of past opposition, strong opposition to change, yet has repeatedly reversed opposing stances after change had been enacted. Believers will selectively bring out such reversals as "proof" that the ARRL was "really all for change" prior to an occurance. Believers cannot see such tarnish but others do.

The ARRL has no indication of "support" for newcomers unless they are teen-agers or totally ignorant of radio or of miniscule experience in ANY radio communication. The (unfortunately) clear implication for many years has been that all who enter must be ignorant of radio and young acolytes of brainwashable aptitudes. The ARRL knows all and sees all, they will "lead the way" because they (and only they) "know what is best."

Of course, the ARRL tries to influence ENTRY regulations into US amateur radio...by the same manner as had so many in the membership under old regulations. The ARRL does not "represent" newcomers, it seems to try to encourage only those who did as the members did. The ARRL and its "leadership" know what is best...

Are these just one person's observations? No. Hardly. It is a sort of synopsis of what thousands of others have seen and felt over the years. There is no poll of that multitude, no proof, yet it has been heard, felt, and understood. It is almost tangible. The signs have just begun to appear, such as the Comments on 98-143.

Perhaps the ARRL leadership ought to start listening to more than its own propaganda, to be more ecumenical in its Belief System. It is free to hold its own Mass but that is only a ceremony...the masses aren't entering the secular enclave.

There are no "black helicopters" but rather fully identifiable ones. There is no paranoia about a "they." There is simply an observation of what has gone on in the past and a very great mass of younger skeptics not convinced. The "they" are seen for who they are, what they have stated.

In article <3C7E4928.5A656ECE@worldnet.att.net>, Dick Carroll
<dickc58@worldnet.att.net> writes:

>When we were kids most new hams came from our age group.

When Carroll and the rest of the "we" were kids I had already
entered adulthood and was active in HF communications.

Carroll's statement is just another variant of "all should do as I
did" which has no justifiable imprimateur of importance.

>That changed
>along the way for number of reasons, and I don't see it going back. There
>are just far too many interesting diversions today that we didn't have.

Oh? The "we" already had moveable type, paper, and electricity
that preceding generations did not?!?

Perhaps Carroll will list all of these lacks of "interesting diversions"
that were in MY generation that suddenly disappeared by HIS
generation?!?

>They think
>they can contact anyone in the world on the Internet much more easily than
>radio, and no license is involved.

They don't "think so," they DO so. Radio amateurs are only lawfully
authorized to contact other lawfully authorized radio amateurs. The
Internet does not require such authorization.

Roughly twenty percent of all US households NOW have some form
of Internet access. That percentage was ZERO eleven years ago.

"Radio" has become a generic, all-embracing term for wireless
communications. The public KNOWS it exists and has existed
for decades. Trying to maintain some aura of mystery about
radio and that authorized amateur radio licensees are somehow
wizards in an arcane activity is not prepostorous, it is simply
stupid and ludicrous today.

It is time to consider the hobby AS a hobby, an enjoyable
recreational technological activity. It has always been so.
Always despite the self-professed self-glorificating statements
of those wrapping themselves in emotional, quasi-patriotic
bunting to prove it higher, more noble and more glorious than
anything else.

I would have thought that using a call sign, that was not yours, to identify oneself even off the air is a form of identity theft, which is a crime. People may have the same exact name but the FCC only issues unique callsigns, no duplicates. So, for example, would a person identifying themselves to an emergency organization as a Ham, by supplying a bootlegged callsign as proof, a crime?

Interesting question. We had a knucklehead around here a few years back
that just loved to chase ambulances. He was impersonating EMT personnel.
He did not pass go ... he did not collect $200 ...

73 from Rochester, NY
Jim
ps - key here is not to mess with emergency organizations - police, fire,
medical ... etc.

This mentality is strikingly familiar to what has been dubbed "blue collar envy" by some. An example, of which, would be Bill Gates working with computers since high school and starting Microsoft when he was 19. Blue Collar Envy is saying, "Yeah, he has billions, but HE NEVER HAD A REAL JOB!"

I would also remind the Brits that seventy percent of English, according to
my high school French teacher, is actually mispronounced French, thanks to
William the Conqueror and the Normans. So all of you Brits had better quit
butchering the French language!

Been to Frankfurt Before?

The German controllers at Frankfurt Airport were a short tempered lot, they not only expected you to know your parking location but how to get there without any assistance from them. So it was with some amusement that we (a Pan Am 747) listened to the following exchange between Frankfurt ground and a British Airways 747 (Speedbird)

Speedbird: "Good morning Frankfurt, Speedbird 206 clear of the active."

Ground: "Guten morgan, taxi to your gate.

The BA 747 pulls onto the main taxiway and stops.

Ground: "Speedbird, do you not know where you are going?!"

Speedbird: "Standby ground, I'm looking up the gate location now.

Ground (with typical German patience): "Speedbird, have you never been to Frankfurt before?!"

Speedbird (coolly): "Yes, in 1944, but I didn't stop."

From: lenover21@aol.com (Len Over 21)

>To be honest, the PERCEPTION of many, licensed or unlicensed,
>is that the ARRL has controlled most of the past of the ARS from
>a decided minority group that is NOT required to be accountable
>to either the membership or non-members.

An odd perception to have of a group of Directors that is elected by the direct vote of that membership.

>The ARRL is a private organization and does not have to follow the
>governmental rules and monitoring of elections or open records-
>keeping. While the ARRL has a quasi-governmental structure and
>claimed "representation" of the ARS and "democratic principle"
>elections and "openness in BoD meetings through publishing
>minutes," the only output comes from the ARRL itself.

And a copious output it is. :-)

>Are there independent, disinterested witnesses to all this "openness and
>honesty?" All I've seen over the years is what the ARRL says it
>does. There are NO independent checks or balances; the ARRL
>says it is honest and aboveboard and all must take them at
>their word..

Yes, we must. :-) Why would those who set ARRL policy not want to be honest and above board?

>The ARRL has achieved a monopoly on amateur radio interest
>publications in the USA. Not an absolute monopoly but one of
>being the major source of information, at least two-thirds of all
>all available English-language amateur publications in print. The
>periodicals are self-sustaining through advertising fees despite
>claims that QST is merely a membership service benefit.

The presence of those advertising fees is not kept secret, Len. To the contrary, as an ARRL employee, I am quite pleased to tell you that the advertising revenues are part of what helps pay for other membership services.

>Before the opening of the Internet a mere decade ago, the ARRL
>acted as an intermediary for its membership (then only about a
>quarter of all licensees as it is now) in relations with the US
>government and especially with the FCC. That was useful since
>government was very large and direct communications with the
>government was difficult. The ARRL had become a de facto
>Big Brother, a claimed ombudsman. It was very difficult for
>individual members to verify if the ARRL actually DID what it

>said it did.

What ARRL says it does wrt the FCC is very much a matter of public record then, as it is now.

> All were expected to believe that the ARRL was
>honest because the ARRL said they were honest. A Belief
>existed and skeptics were scoffed at, ignored by Believers.

Uh, oh, here come the Black Helicopters and Capitilizations. Must be Pontification time!

>The Internet brought a true Revolution as well as Revelation to
>all who had access. Governments now had databases
>available on-line, including Comments and Replies on NPRMs.
>No one had to travel to DC and go to the Reading Room of the
>FCC in order to see documents nor did they have to be a
>lifetime subscriber to the Federal Register or GPO customer.
>Governments even accepted comments from individual
>citizens and did not need attorneys to represent them. The
>FCC made public over 2600 Comments on the 98-143 NPRM,
>all available on-line around the clock.

Yes, it does. How does the fact that now that all these tools are available, ARRL tells hams about them, tells them how to use them, tells hams what it has filed with the FCC and gives the URLs where they can read those filings fit with your "we had to believe they were honest because we had no way of proving they weren't" allegations?

>The ARRL has a large website, too. Many sources of amateur
>radio information are available for free, but nearly as many are
>also available ONLY to members.

And on what basis do you know what percentage of the website is available only to members, Len? From what I see, the members-only features are probably less than 20% of the whole. Most of that is related to what is printed in QST, and I think we can reasonably conclude that someone who chooses not to get QST will have to accept that about half of the reprinted articles from QST and QEX on the ARRL website are available only to members.

>That same website has continual advertisements paid for by others and for ITSELF. It
>is an ideal self-promotional medium and the ARRL never fails
>in such self-promotion.

Good for them. As a member, I appreciate that ARRL promotes the products that pay for the things that are important to me.

>Competitors in publications are featured
>only if the ARRL stands to profit by resale of such products.

Nonsense. The ARRL Tech Info pages refer to any and all good sources of info known to the Technical staff. The TISFIND database features companies selling products of interest to hams whether they are competitors or advertisers or

not. Your conspiracy theory sounds good, Len, but doesn't hold up to reality.

>The implications of altruism have become tarnished.

By whom? Your "they could be lying so they must be" allegations? I don't think so.

>The ARRL membership is still not above a quarter of all US
>amateur radio licensees, yet the ARRL still implies that it
>"represents all amateurs."

Maybe someday you will understand the meaning of representation, Len.

>The ARRL has had a record of
>past opposition, strong opposition to change, yet has repeatedly
>reversed opposing stances after change had been enacted.

In what way? ARRL didn't purge the record of its postion wrt restructuring after restructuring was enacted differently. It did accept the outcome after filing its Petition for Reconsideration. To hear you talk, one would think that you believe ARRL should have flouted the law. I think this is a case you would damn either way ARRL did it. As a member, I believe that ARRL should not flout the law.

>Believers will selectively bring out such reversals as "proof" that
>the ARRL was "really all for change" prior to an occurance.

Can you provide an example of this nonsense?

>Believers cannot see such tarnish but others do.

Ah, the Secret Seer phenomenon. :-) We understand, Len.

>The ARRL has no indication of "support" for newcomers unless
>they are teen-agers or totally ignorant of radio or of miniscule
>experience in ANY radio communication.
I can barely understand what this means? In your twisted view, what rational reason can you offer that ARRl would not want to support newcomers unless they didn't know anything? You can sure cook up some far-flung ideas, Len. :-)

> The (unfortunately)
>clear implication for many years has been that all who enter
>must be ignorant of radio and young acolytes of brainwashable
>aptitudes.

Well, if you have had to bring in allegations of brainwashing, you really are scratching pretty deep, Len. I think I will let that one speak for itself. You can Clay can both think "they" are out to get other people, but YOU are too smart to be caught by their lies. :-)

>The ARRL knows all and sees all, they will "lead the
>way" because they (and only they) "know what is best."

I disagree, Len. I do not believe that ARRL is either all knowing, or all seeing. You are free to believe they are, but it is pretty odd that you would

believe that and say all the things you said above.

>Of course, the ARRL tries to influence ENTRY regulations into
>US amateur radio...by the same manner as had so many in
>the membership under old regulations.
Can you explain what you mean by this?

>Are these just one person's observations? No. Hardly. It is a
>sort of synopsis of what thousands of others have seen and
>felt over the years.

I don't imagine that "thousands" have seen and felt the TRVTH as Len knows it,
Len.

>There is no poll of that multitude, no proof,
>yet it has been heard, felt, and understood. It is almost
>tangible. The signs have just begun to appear, such as the
>Comments on 98-143.

This reminds me of the guy in rags standing on the street corner preaching the
end is near. :-)

>Perhaps the ARRL leadership ought to start listening to more
>than its own propaganda, to be more ecumenical in its Belief
>System. It is free to hold its own Mass but that is only a
>ceremony...the masses aren't entering the secular enclave.

>There are no "black helicopters" but rather fully identifiable
>ones. There is no paranoia about a "they." There is simply
>an observation of what has gone on in the past and a very
>great mass of younger skeptics not convinced. The "they"
>are seen for who they are, what they have stated.

I hope you feel better soon, Len.

There has never been mandated testing at "high speeds", though. 20 wpm
isn't really fast CW at all.

The problem, Carl, is that the things they are saying to "defend" morse code by trying to keep a code test are the very things I would NOT say to a ham to encourage him to actually try Morse code.

I am sure you don't care one way or the other about what hams choose to do with Morse code, but I sure would like to see more hams use and enjoy it. On one of the QRP lists, we are having a nice discussion about how to help the newly minted 5 wpm QRPers with QSOs and fun with CW.

>their day in the barrel" isn't going to attract a lot of folks, Dick.

We could try it on the FPQRP-L list. Dick could give them vinegar and I could give them honey and we could ask the slow-speed hams there which made them want to try CW.

You game to come up with a vinegar paragraph, Dick? Maybe we could put this to rest with a few impartial judges.

You are correct, and such input would be valuable. You can email your comments
to any of the participating VECs or directly to the chairman.

"Dropping like flies"? How many is that?

> What's the age of the average ham?

No such thing as an "average" amateur.

The "average age" can be misleading, too. There's the mean, the median,
and a bunch of other "averages", of course.

People are living longer today. More important, they are staying active
longer. I know many locals who became hams as a retirement activity.
Some were "retreads" who had dropped out years ago, some were "always
wanted to but never got around to it" folks, and some had never heard
of ham radio before. All of them tend to raise the average age!

Some folks look at the attendance at hamfests and radio club meetings,
see the preponderance of older folks and conclude that ham radio is
"dying". In truth what's going on is that the younger and middle
aged folks are often too busy working or taking care of families
to spend an entire evening or weekend day away from home.

I was off at a hamfest lately, and another ham expressed his concerns that "only old people are here." I looked around the room and, excepting teens, I saw hams of all ages. I told him to look again, and he did. He had a very surprised look as he realized that there were hams of all ages there. Maybe a few more old timers than 20s and 30s, but hams of all ages were represented.

FWIW.

I'm curious about this "policy" myself. My wife bought me a 10 m rig from
them in 2000 for Christmas (she's a nonham). Plus, I've never been asked for
my license when buying stuff there.

There's another sticky issue I haven't seen mentioned either, the secondary
market. If I resell a radio, do *I* now have to check for licenses? What a
pain that would be. Would put a crimp in many a hamfest.

Dick has no choice but to discourage as many new hams as possible from
learning Morse code and using CW. Otherwise, he will prove himself wrong.

Anything is possible on the planet that Dick lives on. :-)

Look at the SK list.

> People are living longer today.

But they are not living forever. The average age of all hams has been
increasing for some time. It cannot increase forever. I'm told by
someone who knows about such things, that the absolute maximum lifespan
for a present-day Homo sapien is approximately 120 years. That's when
the ability of human DNA to reproduce itself peters out.
